**CERTIFIED LOCAL GOVERNMENT MASTER AGREEMENT
BETWEEN
PENNSYLVANIA HISTORICAL AND MUSEUM COMMISSION
AND
HAVERFORD TOWNSHIP, DELAWARE COUNTY**

This Certified Local Government Master Agreement is between the Commonwealth of Pennsylvania, acting by and through the Pennsylvania Historical and Museum Commission, (hereinafter “Commission”) and Haverford Township , (hereinafter “CLG”).

Pursuant to the National Historic Preservation Act, 54 U.S.C. § 302902, the United States Department of the Interior’s National Park Service (“National Park Service”), makes certain funds available to the Commonwealth for the identification, evaluation and protection of historic resources in Pennsylvania to be distributed as grants to Certified Local Governments in a program administered by the Commission.

Haverford Township is a Certified Local Government (“CLG”) pursuant to 54 U.S.C. § 302501 *et seq.*, effective as of March 2, 2015. The CLG’s may submit applications to the Commission to carry out projects under the program.

The parties intending to be legally bound hereby, agree as follows:

I. Term.

- 1. Term.** The term of this agreement will commence on January 1, 2025 or the date of the last required Commonwealth signature, whichever is later, (“Effective Date”) and will terminate on December 31, 2029 (“Termination Date”), unless terminated by the Commonwealth in accordance with Article V, Section 4 of this agreement. This agreement is not legally binding on the Commonwealth until all signatories, including those signing their approvals for form and legality, have signed this agreement and the Commonwealth provides a fully executed copy to the CLG.

- 2. Master Agreement.** This agreement serves as the Master Agreement for the Certified Local Grant program (“Program”.) Once fully executed, the CLG may apply for Program funds in an open grant application cycle. Once the application and project are approved by the Commission, the Commission shall make appropriated funds available to the CLG upon issuance of a Funding Release. Such funds shall be used by the CLG to carry out the activities described in the CLG’s application. Each approved application will be attached to and become part of this Master Agreement. All Funding Releases issued by the Commission will be attached to and become part of this Master Agreement. Examples of Funding Release forms are attached and incorporated at Exhibit A.

III. Responsibilities of the Parties.

1. Responsibilities of the Certified Local Government.

- a. **Grant Project.** A CLG may submit multiple grant project applications per year. These grant projects will become part of and referenced within each Funding Release Form.
- b. **Project Description.** The CLG shall use the grant award in accordance with each approved application's project description and budget.
- c. **Project Budget.** The CLG's receipt of the executed Funding Release authorizes the CLG to incur costs in accordance with the Funding Release and approved project.
- d. **Guidelines.** The CLG shall review and comply with all guidelines and regulations issued by the Commission and the National Park Service applicable to this Program, including but not limited to the *Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation*; the *Uniform Administrative Requirements, Cost Principles and Audit Requirements for Federal Awards*, 2 C.F.R. § 200 *et seq.*; and the Commission's current federal fiscal year grant application and instructions found at <https://www.phmc.pa.gov/Preservation/Grants-Funding>.
- e. **Matching Share.** The CLG will provide evidence in each grant application that it has secured a matching share as defined in the current federal fiscal year grant application and instructions.
- f. **Record Preservation and Audit.** The CLG shall maintain and preserve all records related to this Master Agreement. The CLG shall give the Commonwealth and any of its authorized representatives, including, but not limited to, the Commission, the Auditor General, the Inspector General, or federal auditors, full and free access to all of these records. The Commission reserves the right to perform audits, site visits and conduct progress reviews. The CLG shall preserve, maintain, and make available for inspection its records, including all receipts, obligations and disbursements related to any Funding Release approved under this Master Agreement, for a period of 5 years from the date of final payment under this agreement, and for period, required by applicable statute, by any other paragraph of this agreement, or by sub-paragraphs (a) or (b) below.
 - a. If this agreement is completely or partially terminated, the CLG shall preserve and make available to the Commission all records relating to

the work performed prior to termination for a period of 5 years from the date of any resulting final payment.

- b. For records related to any litigation or settlement of claims arising out of the CLG performance under this agreement or costs and expenses related to this agreement as to which exception has been taken by the auditors, the CLG must retain those records until the litigation, claim, or exception has resulted in a final decision or binding resolution by the relevant decision-maker or tribunal.

2. Responsibility of the Commission.

- A. **Commission Approval.** The Commission will approve or disapprove project applications at its discretion, and issue Funding Releases for approved projects. The Funding Release shall be approved and signed by the Executive Director, the Commission's Office of Chief Counsel, and Comptroller Operations certifying the availability of funds.
- B. **Reimbursement.** Subject to the availability of the federal grant funds, the Commission shall reimburse the CLG for project costs after the CLG submits invoices and source documentation. The Commission shall only reimburse those costs set forth in the Funding Release. The CLG must demonstrate full compliance with, and satisfactory progress toward, completion of the work as specified in the project description. After receiving satisfactory documentation of costs and expenditures, the Commission will make reimbursement pursuant to all laws, rules, and regulations including the CLG Guidelines and Instructions.

IV. Other Applicable Provisions

1. Assumption of Legal Responsibility. The CLG shall assume sole legal responsibility for any claims for damages asserted against the Commonwealth, the Commission, or any employees or agents, resulting from the negligence or intentional actions or omissions of the CLG. The CLG's responsibility includes, but is not limited to, the assertion of defenses on the part of the Commonwealth, the Commission, and their employees, and the costs of the assertion. The Commission shall provide the CLG with prompt notice of any claims brought to its attention and the CLG may control the defense or settlement of the claim. However, the Commonwealth reserves the right for itself, its instrumentality, the Commission, and their employees, to participate in the defense of any such claim through its Attorney General at its own expense.

2. **Home Rule.** If the CLG has a home rule charter promulgated under the laws of the Commonwealth, this agreement shall not be considered a waiver of any of the CLG's rights or defenses it may have under such charter.
3. **Federal Funding Accountability and Transparency Act Provisions.** The CLG shall maintain current registration in the federal System for Award Management (SAM) (SAM.gov), at all times during which the CLG has active Federal awards funded pursuant to this contract. SAM assigns a Unique Entity ID (UEID) to each entity registered in SAM. The CLG must provide its assigned UEID number to the Commission with its project application. The CLG agrees to provide additional information in conformance with the Federal Funding Accountability and Transparency Act if they become applicable.
4. **Termination.** The Commission reserves the right to terminate this agreement at any time by providing thirty (30) days written notice of termination to the CLG, for non-availability of funds; nonperformance; inadequate performance; or noncompliance with the project description, the terms and conditions of this agreement, or the terms and conditions contained in any other grant with the Commonwealth or the United States of America. The Commonwealth shall have the right to terminate the agreement for its convenience if the Commonwealth determines that termination is in the best interest of the Commonwealth. Upon termination of this agreement, the CLG shall be prohibited from incurring grant related expenses, spending or disbursing any remaining grant funds and shall immediately return all remaining unused grant funds to the Commission.
5. **No Grant Funds Will Be Used Against the Commonwealth.** No funding awarded to CLG under this Agreement shall be used in any action against the Commonwealth or the Commission.
6. **Ineligible Costs.** The CLG shall repay to the Commission the entire grant award amount if the CLG violates any terms and conditions of this agreement or any applicable laws or regulations, or if the Commission determines that costs claimed by the CLG are ineligible. Allowable costs are only those approved in the and in accordance with the grant award. All other costs are unallowable, unless approved in writing by the Commission
7. **Equipment.** The Commission reserves the right to make the final determination on the title to equipment or fixed assets purchased or fabricated with grant funds under this agreement.
8. **Amendments.** Amendments and modifications to this agreement must be accomplished through a formal written document signed by the parties with the same formality as the original agreement.
9. **Lobbying.** The CLG may not use the grant funds for lobbying activities.

10. Standard Terms and Conditions. The CLG agrees to be bound by the Commonwealth Standard Terms and Conditions in Exhibit B.

11. Proposal as a Public Record. The CLG's application and project proposal is part of the record of this transaction and will be available to the public.

12. Waiver. Any waiver of any terms and conditions of this agreement must be in writing and signed by the waiving party. The waiver of any of the terms and conditions of agreement may not be construed as a waiver of any subsequent breach of the same or any other terms or conditions of this agreement.

13. Assignment. The CLG may not assign any of its rights or obligations under this agreement without the prior written consent of the Commission. This agreement shall be binding upon and inure to the benefit of the parties and their respective successors and permitted assigns.

14. No Agency. The CLG is not an agent, employee or representative of the Commission or the Commonwealth, nor shall the CLG represent itself as such to third parties. Nothing in this Agreement may be construed so as to create a relationship of employer and employee, principal and agent, or joint venture among the Commonwealth, Commission and the CLG.

15. Third-Party Beneficiaries. Nothing in this Agreement is intended to grant any legally enforceable rights or provide any benefits to any third-party.

16. Survival. The terms and conditions of this Agreement that by their nature are reasonably intended by the parties to survive termination shall survive the expiration or termination of this Agreement.

17. Assurances. If reasonably requested by one party, the other party shall execute and deliver any other documents and take any other action as may be necessary to affect the terms of this agreement.

18. Counterparts. This agreement may be executed in counterparts, each of which is deemed an original (including copies sent to a party by electronic transmission) as against the party signing the counterpart, but which together shall constitute one and the same instrument.

19. Severability. If any provision of this agreement is determined to be void, invalid, unenforceable or illegal for any reason, it will be ineffective only to the extent that the validity and enforceability of all the remaining provisions is not affected.

20. Integration. This agreement, including all referenced documents, constitutes the entire agreement between the parties. No agent, representative, employee or officer of either the Commonwealth or the CLG has the authority to make, or has made, any statement, agreement or representation, oral or written, in connection

with this agreement, that, in any way, can be deemed to modify, add to or detract from, or otherwise change or alter its terms and conditions. No negotiations between the parties, nor any custom or usage, may be permitted to modify or contradict any of the terms and conditions of this agreement.

Exhibit B
Commonwealth Standard Terms and Conditions
Grant Version (Revised - 10/1/2023 v2)

1. DEFINITIONS

Capitalized terms used in these Commonwealth standard terms and conditions that are not otherwise defined in these provisions have the meanings specified in the agreement to which they are attached.

2. INDEMNIFICATION

The Grantee shall indemnify and defend the Commonwealth against all third-party claims, suits, demands, losses, damages, costs, and expenses, including without limitation, litigation expenses, attorneys' fees, and liabilities, arising out of or in connection with any activities performed by the Grantee or its employees and agents pursuant to this agreement, as determined by the Commonwealth in its sole discretion.

3. NONDISCRIMINATION/SEXUAL HARASSMENT

- a. **Representations.** The Grantee represents that it is presently in compliance with and will remain in compliance with all applicable federal, state, and local laws, regulations, and policies relating to nondiscrimination and sexual harassment for the term of the agreement. The Grantee shall, upon request and within the time periods requested by the Commonwealth, furnish all necessary employment documents and records, including EEO-1 reports, and permit access to its books, records, and accounts by the Commonwealth for the purpose of ascertaining compliance with provisions of this Nondiscrimination/Sexual Harassment Clause.
- b. **Nondiscrimination/Sexual Harassment Obligations.** The Grantee shall not:
 - i. in any manner discriminate in the hiring of any employee(s) for the performance of the activities required under this agreement or any subgrant agreement, contract, or subcontract, by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of the Pennsylvania Human Relations Act ("PHRA") and applicable federal laws, against any citizen of this Commonwealth who is qualified and available to perform the work to which the employment relates.
 - ii. in any manner discriminate by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of the PHRA and applicable federal laws, against or intimidate any of its employees.
 - iii. in any manner discriminate by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of the PHRA and applicable federal laws, in the provision of services under this agreement or any subgrant agreement, contract, or subcontract.

- iv. in any manner discriminate by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of PHRA and applicable federal laws, against any subgrantee, contractor, subcontractor, or supplier who is qualified to perform the work to which this agreement relates.
 - v. in any manner discriminate against employees by reason of participation in or decision to refrain from participating in labor activities protected under the Public Employee Relations Act, Pennsylvania Labor Relations Act, or National Labor Relations Act, as applicable, and to the extent determined by entities charged with the Acts' enforcement and shall comply with any provision of law establishing organizations as employees' exclusive representatives.
- c. **Establishment of Grantee Policy.** The Grantee shall establish and maintain a written nondiscrimination and sexual harassment policy that complies with the applicable law and these Nondiscrimination/Sexual Harassment provisions and shall inform its employees in writing of the policy. The policy must contain a provision that states that sexual harassment will not be tolerated and employees who practice it will be disciplined. For the entire period of this agreement, the Grantee shall: (1) post its written nondiscrimination and sexual harassment policy or these Nondiscrimination/Sexual Harassment provisions conspicuously in easily accessible and well-lighted places customarily frequented by employees at or near where the grant activities are performed; or (2) provide electronic notice of the policy or this clause to its employees not less than annually.
- d. **Notification of Violations.** The Grantee's obligations pursuant to these provisions are ongoing from the effective date and through the termination date of the agreement. Accordingly, the Grantee shall notify the Commonwealth if, at any time during the term of this agreement, it becomes aware of any actions or occurrences that would result in violation of these provisions.
- e. **Cancellation or Termination of Agreement.** The Commonwealth may cancel or terminate this agreement and all money due or to become due under this agreement may be forfeited for a violation of the terms and conditions of these Nondiscrimination/Sexual Harassment provisions. In addition, the granting agency may proceed with debarment or suspension and may place the Grantee in the Contractor Responsibility File.
- f. **Subgrant Agreements, Contracts, and Subcontracts.** The Grantee shall include these Nondiscrimination/Sexual Harassment provisions in its subgrant agreements, contracts, and subcontracts with all subgrantees, contractors, and subcontractors providing goods or services under this agreement. The incorporation of these provisions in the Grantor's subgrants, contracts, or subcontracts does not create privity of contract between the Commonwealth and any subgrantee, contractor, or subcontractor, and no third-party beneficiaries are created by those provisions. If the Grantee becomes aware of a subgrantee's, contractor's, or subcontractor's violation of these provisions, the Grantee shall use its best efforts to ensure the subgrantee's, contractor's, or subcontractor's compliance with these provisions.

4. GRANTEE INTEGRITY

a. **Definitions.** For purposes of these Grantee Integrity Provisions, the following definitions apply:

- i. “Affiliate” means two or more entities where (a) a parent entity owns more than 50% of the voting stock of each of the entities; (b) a common shareholder or group of shareholders owns more than 50% of the voting stock of each of the entities; or (c) the entities have a common proprietor or general partner.
- ii. “Grantee” means the individual or entity, that has entered into this agreement with the Commonwealth.
- iii. “Grantee Related Parties” means any Affiliates of the Grantee and the Grantee’s executive officers, Pennsylvania officers and directors, or owners of five percent or more interest in the Grantee.
- iv. “Financial Interest” means ownership of more than a five percent interest in any business or holding a position as an officer, director, trustee, partner, employee, or holding any position of management.
- v. “Gratuity” means tendering, giving, or providing anything of more than nominal monetary value including, but not limited to, cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, services, employment, or contracts of any kind. The exceptions set forth in the [Governor’s Code of Conduct, Executive Order 1980-18](#), as may be amended, 4 Pa. Code §7.153(b), apply.
- vi. “Non-Solicitation Award Process” means a method of awarding grants based on predetermined criteria, without the solicitation of grant applications.

b. **Representations and Warranties.**

- i. **Grantee Representation and Warranties.** The Grantee represents, to the best of its knowledge and belief, and warrants that within the last five years neither the Grantee nor Grantee Related Parties have:
 1. been indicted or convicted of a crime involving moral turpitude or business honesty or integrity in any jurisdiction;
 2. been suspended, debarred, or otherwise disqualified from entering into any contract with any governmental agency;
 3. had any business license or professional license suspended or revoked;
 4. had any sanction or finding of fact imposed as a result of a judicial or administrative proceeding related to fraud, extortion, bribery, bid rigging, embezzlement, misrepresentation or anti-trust; and
 5. been, and are not currently, the subject of a criminal investigation by any federal, state, or local prosecuting or investigative agency or civil anti-trust investigation by any federal, state, or local prosecuting or investigative agency.

- ii. **Grantee Explanation.** If the Grantee cannot make the representations and warranties set forth above at the time of its submission of its grant application or if the agreement is awarded pursuant to a Non-Solicitation Award Process at the time of the execution of the agreement, the Grantee shall submit a written explanation outlining the reasons why it cannot make those representations and warranties. The Commonwealth may, based on its evaluation of the explanation provided, determine whether it is in the Commonwealth's best interest to execute the agreement.
 - iii. **Further Representations.** By submitting any bills, invoices, or requests for payment pursuant to the agreement, the Grantee further represents that it has not violated any of these Grantee Integrity Provisions during the term of the agreement.
 - iv. **Notice.** The Grantee shall immediately notify the Commonwealth, in writing, if at any time during the term of the agreement it becomes aware of any event that would cause the Grantee's certification or explanation to change. The Grantee acknowledges that the Commonwealth may, in its sole discretion, terminate the agreement for cause if it learns that any of the certifications made in these Grantee Integrity Provisions are currently false or misleading due to intervening factual circumstances or were false or misleading or should have been known to be false or misleading when entering into the agreement.
- c. **Grantee Responsibilities.** During the term of this agreement, the Grantee shall:
- i. maintain the highest standards of honesty and integrity.
 - ii. take no action in violation of any applicable laws, regulations, or other requirements applicable to the Grantee that govern Commonwealth contracting or grant administration.
 - iii. establish and implement a written business integrity policy that includes, at a minimum, the requirements of these Grantee Integrity Provisions as they relate to the Grantee's activity with the Commonwealth and Commonwealth employees and ensure that its employees comply with the policy.
 - iv. not accept, agree to give, offer, confer, agree to confer, or promise to confer, directly or indirectly, any gratuity or pecuniary benefit to any person, or to influence or attempt to influence any person in violation of any federal or state law, regulation, executive order, statement of policy, management directive, or bulletin applicable to the award of grants or the administration of this agreement.
 - v. not have a financial interest in any other subgrantee, contractor, subcontractor, or supplier providing services, labor, or material under this agreement, unless the financial interest is disclosed to the Commonwealth in writing and the Commonwealth consents to Grantee's financial interest. The Grantee must disclose the financial interest to the Commonwealth at the time of submission of its grant application, or if a Non-Solicitation Award Process is used, no later than the date the Grantee signs the agreement. The Commonwealth shall be deemed to

have consented if the required disclosure is received and all of the required Commonwealth signatures are affixed.

- vi. comply with the requirements of the Lobbying Disclosure Act (65 Pa.C.S. § 13A01 et seq.) regardless of the method of award.
- vii. comply with the requirements of Section 1641 of the Pennsylvania Election Code (25 P.S. § 3260a) if this agreement was awarded pursuant to a Non-Solicitation Award Process.
- viii. immediately notify the Commonwealth or the Office of the State Inspector General, in writing, when the Grantee has reason to believe that any breach of ethical standards as set forth in law, the Governor's Code of Conduct, or these Grantee Integrity Provisions has occurred or may occur, including, but not limited to, contact by a Commonwealth officer or employee, which, if acted upon, would violate the ethical standards.

d. **Investigations.** If a State Inspector General investigation is initiated, the Grantee shall:

- i. reimburse the Commonwealth for the reasonable costs of investigation incurred by the Office of the State Inspector General for investigations of the Grantee's compliance with the terms of this or any other agreement between the Grantee and the Commonwealth that results in the suspension or debarment of the Grantee. The Grantee shall not be responsible for investigative costs for investigations that do not result in the Grantee's suspension or debarment.
- ii. cooperate with the Office of the State Inspector General in its investigation of any alleged Commonwealth agency or employee breach of ethical standards and any alleged Grantee non-compliance with these Grantee Integrity Provisions and make identified Grantee employees and volunteers available for interviews at reasonable times and places.
- iii. upon the inquiry or request of an Inspector General, provide, or if appropriate, make promptly available for inspection or copying, any information of any type or form deemed relevant by the Office of the State Inspector General to Grantee's integrity and compliance with these provisions. This information may include, but is not be limited to, the Grantee's business or financial records, documents or files of any type or form that refer to or concern this agreement.

e. **Termination.** For violation of any of these Grantee Integrity Provisions, the Commonwealth may terminate this agreement and any other contract with the Grantee, claim liquidated damages in an amount equal to the value of anything received in breach of these Grantee Integrity provisions, claim damages for all additional costs and expenses incurred in obtaining another grantee to complete performance under this agreement, and debar and suspend the Grantee from doing business with the Commonwealth. These rights and remedies are cumulative, and the use or non-use of any one does not preclude the use of all or any other. These rights and remedies are in addition to those the Commonwealth may have under law, statute, regulation, or otherwise.

f. **Subcontracts.** The Grantee shall include these Grantee Integrity Provisions in its subgrant agreements, contracts, and subcontracts with all subgrantees, contractors, and

subcontractors providing goods or services under this agreement. The incorporation of this provision in the Grantee's subgrant agreements, contracts, and subcontracts shall not create privity of contract between the Commonwealth and any subgrantee, contractor, or subcontractor, and no third-party beneficiaries are created by the inclusion of these provisions. If the Grantee becomes aware of a subgrantee's, contractor's, or subcontractor's violation of these provisions, the Grantee shall use its best efforts to ensure their compliance with these provisions.

5. CONTRACTOR RESPONSIBILITY

- a. **Definition.** For the purpose of these provisions, the term "Contractor" means as any person, including, but not limited to, a bidder, offeror, loan recipient, grantee or lessor, who has furnished or performed or seeks to furnish or perform, goods, supplies, services, leased space, construction or other activity, under a contract, grant, lease, purchase order or reimbursement agreement with the Commonwealth. The term also includes a permittee, licensee, or any agency, political subdivision, instrumentality, public authority, or other public entity in the Commonwealth.
- b. **Contractor Representations.**
 - i. The Contractor represents for itself and its subgrantees, contractors, and subcontractors required to be disclosed or approved by the Commonwealth, that as of the date of its execution of this agreement, that neither the Contractor, nor any of its subgrantees, contractors, and subcontractors, are under suspension or debarment by the Commonwealth or any governmental entity, instrumentality, or authority and, if the Contractor cannot make this representation, the Contractor shall submit, along with the agreement, a written explanation of why the certification cannot be made.
 - ii. The Contractor represents that, as of the date of its execution of this agreement, it has no tax liabilities or other Commonwealth obligations, or has filed a timely administrative or judicial appeal, if any liabilities or obligations exist, or is subject to a duly approved deferred payment plan if any liabilities exist.
- c. **Notification.** The Contractor shall notify the Commonwealth if, at any time during the term of the agreement, it becomes delinquent in the payment of taxes, or other Commonwealth obligations, or if it or, to the best of its knowledge, any of its subgrantees, contractors, or subcontractors are suspended or debarred by the Commonwealth, the federal government, or any other state or governmental entity. The Contractor shall provide this notification within 15 days of the date of suspension or debarment.
- d. **Default.** The Contractor's failure to notify the Commonwealth of its suspension or debarment by the Commonwealth, any other state, or the federal government constitutes an event of default of the agreement with the Commonwealth.
- e. **Reimbursement.** The Contractor shall reimburse the Commonwealth for the reasonable costs of investigation incurred by the Office of State Inspector General for investigations of the Contractor's compliance with the terms of this agreement or any other agreement between the Contractor and the Commonwealth that results in the suspension or

debarment of the Contractor. These costs include, but are not limited to, salaries of investigators, including overtime; travel and lodging expenses; and expert witness and documentary fees. The Contractor shall not be responsible for investigative costs for investigations that do not result in the Contractor's suspension or debarment.

- f. **Suspension and Debarment List.** The Contractor may obtain a current list of suspended and debarred Commonwealth contractors by visiting the eMarketplace website at <http://www.emarketplace.state.pa.us> and clicking the Debarment list tab.

6. AMERICANS WITH DISABILITIES ACT

- a. **No Exclusion.** Pursuant to the Americans with Disabilities Act, 42 U.S. Code § 12101, et seq., no qualified individual with a disability may, on the basis of the disability, be excluded from participation in this agreement or from activities provided for under this agreement.
- b. **Compliance.** For all goods and services provided pursuant to this agreement, the Grantee shall comply with Title II of the Americans with Disabilities Act, the "General Prohibitions Against Discrimination" set forth in 28 C. F. R. § 35.130, and all other regulations promulgated under Title II of the Americans with Disabilities Act that apply to state and local governments.
- c. **Indemnification.** The Grantee shall indemnify the Commonwealth against all third-party claims, suits, demands, losses, damages, costs, and expenses, including without limitation, litigation expenses, attorneys' fees, and liabilities, arising out of or in connection with the Grantee's failure or its employee's or agent's failure to comply with the provisions of paragraph a, as determined by the Commonwealth in its sole discretion.

7. APPLICABLE LAW AND FORUM

This agreement is governed by and must be interpreted and enforced in accordance with the laws of the Commonwealth of Pennsylvania (without regard to any conflict of laws provisions) and the decisions of the Pennsylvania courts. The Grantee consents to the jurisdiction of any court of the Commonwealth of Pennsylvania and any federal courts in Pennsylvania and waives any claim or defense that such forum is not convenient or proper. Any Pennsylvania court or tribunal has in personam jurisdiction over the Grantee, and the Grantee consents to service of process in any manner authorized by Pennsylvania law. This provision may not be interpreted as a waiver or limitation of the Commonwealth's rights or defenses.

8. RIGHT TO KNOW LAW

- a. **Applicability.** The Pennsylvania Right-to-Know Law, 65 P.S. §§ 67.101-3104, ("RTKL") applies to this agreement.
- b. **Grantee Assistance.** If the Commonwealth needs the Grantee's assistance in any matter arising out of the RTKL related to this agreement, the Commonwealth shall notify the Grantee that it requires the Grantee's assistance, and the Grantee shall provide to the Commonwealth:
 - i. access to, and copies of, any document or information in the Grantee's possession (Requested Information) arising out of this agreement that the

Commonwealth reasonably believes is a public record under the RTKL, within ten calendar days after receipt of written notification; and

- ii. any other assistance as the Commonwealth may reasonably request, in order to comply with the RTKL with respect to this agreement.
- c. **Trade Secret or Confidential Proprietary Information.** If the Grantee considers the Requested Information to include a Trade Secret or Confidential Proprietary Information, as those terms are defined by the RTKL, or other information that the Grantee considers exempt from production under the RTKL, the Grantee shall notify the Commonwealth and provide, within seven calendar days of receipt of the written notice a written statement, signed by a representative of the Grantee, that explains why the requested material is exempt from public disclosure under the RTKL. If the Commonwealth determines that the Requested Information is clearly not exempt from disclosure, the Grantee shall provide the Requested Information to the Commonwealth within five business days of receipt of written notice of the Commonwealth's determination.
- d. **Reimbursement**
 - i. **Commonwealth Reimbursement.** If the Grantee fails to provide the Requested Information and the Commonwealth is ordered to produce the Requested Information, the Grantee shall reimburse the Commonwealth for any damages, penalties, or costs that the Commonwealth may incur as a result of the Grantee's failure, including any statutory damages assessed against the Commonwealth.
 - ii. **Grantor Reimbursement.** The Commonwealth will reimburse the Grantee for any costs that the Grantee incurs as a direct result of complying with these provisions only to the extent allowed under the fee schedule established by the Office of Open Records or as otherwise provided by the RTKL.
- e. **Challenges of Commonwealth Release.** The Grantee may file a legal challenge to any Commonwealth decision to release a record to the public with the Office of Open Records, or in the Pennsylvania Courts, however, the Grantee shall reimburse the Commonwealth for any legal expenses incurred by the Commonwealth as a result of the challenge, including any damages, penalties or costs that the Commonwealth may incur as a result of the Grantee's legal challenge, regardless of the outcome.
- f. **Waiver.** As between the parties, the Grantee waives all rights or remedies that may be available to it as a result of the Commonwealth's disclosure of Requested Information pursuant to the RTKL.
- g. **Survival.** The Grantee's obligations contained in this Section survive the termination or expiration of this agreement.

9. OFFSET

The Commonwealth may set off the amount of any state tax liability or other obligation of the Grantee, or its subsidiaries, owed to the Commonwealth against any payments due the Grantee under any contract between the Commonwealth and Grantee.

10. AUTOMATED CLEARING HOUSE (ACH) PAYMENTS

- a. **Payment Method.** The Commonwealth shall make payments to the Grantee through the Automated Clearing House (ACH). Within 10 days of the grant award, the Grantee must submit or must have submitted its ACH information within its user profile in the Commonwealth's Master Database. The Grantee may enroll to receive remittance information via electronic addenda and email (e-Remittance). ACH and e-Remittance information is available at the following:

<https://www.budget.pa.gov/Services/ForVendors/Pages/Direct-Deposit-and-e-Remittance.aspx>

- b. **Unique Identifier.** The Grantee must submit a unique invoice number with each invoice submitted. The Commonwealth shall list the Grantee's unique invoice number on its ACH remittance advice to enable the Grantee to properly apply the state agency's payment to the respective invoice or program.
- c. **ACH Information in the Commonwealth's Master Database.** The Grantee shall ensure that the ACH information contained in Commonwealth's Master Database is accurate and complete. The Grantee's failure to maintain accurate and complete information may result in delays in payments.

11. WORKER PROTECTION AND INVESTMENT

The Grantee shall comply with all applicable Pennsylvania state labor laws and worker safety laws including, but not limited to, the following:

- a. Construction Workplace Misclassification Act;
- b. Employment of Minors Child Labor Act;
- c. Minimum Wage Act;
- d. Prevailing Wage Act;
- e. Equal Pay Law;
- f. Employer to Pay Employment Medical Examination Fee Act;
- g. Seasonal Farm Labor Act;
- h. Wage Payment and Collection Law;
- i. Industrial Homework Law;
- j. Construction Industry Employee Verification Act;
- k. Act 102: Prohibition on Excessive Overtime in Healthcare;
- l. Apprenticeship and Training Act; and
- m. Inspection of Employment Records Law.

**RE: Cobbs Creek Interceptor Stabilization
Contract No. SS-50 (Re-Bid)**

Dear Mr. Burman:

Attached herewith is a tabulation of the bids received on Friday, August 30, 2024, at 10:00 a.m. for the above referenced contract. The low bidder was BrightFields, Inc of Wilmington, DE with a base bid of \$95,800.00 and add alternate deduct of \$5,525.00. Since we have not worked with BrightFields, Inc in the past, we contacted some of the references provided. All of the references contacted indicated their work to be satisfactory.

Based upon the above, we recommend that the Township award the contract to BrightFields, Inc in the base bid amount of \$95,800.00 contingent upon execution of the contract and supply of the required bonds and insurance.

Should you have any questions or comments, please do not hesitate to contact the undersigned.

Sincerely,
PENNONI

David Pennoni, PE
Township Engineer

**RE: Darby Creek Trail
Southern Extension – Phase II
Contract No. REC-31**

Dear Mr. Burman:

Attached herewith is a tabulation of the bids received on Friday, August 30, 2024, at 10:00 a.m. for the above referenced contract. The low bidder was Frania, Inc. of Aston, PA with a base bid of \$264,500.00 and add alternate of \$20,000.00. Since we have not worked with Frania, Inc. in the past, we contacted some of the references provided. All of the references contacted indicated their work to be satisfactory.

Based upon the above, we recommend that the Township award the base bid plus add alternate to Frania, Inc. in the amount of \$284,500.00 contingent upon execution of the contract and supply of the required bonds and insurance.

Should you have any questions or comments, please do not hesitate to contact the undersigned.

Sincerely,
PENNONI

**RE: Haverford Township Police Parking Upgrades
for Electric Vehicle Charging Stations
Contract No. REC-32**

Dear Mr. Burman:

Attached herewith is a tabulation of the bids received on Wednesday, September 4, 2024, at 12:00 p.m. for the above referenced contract. The low bidder was Hobbs and Company, Inc. of Boothwyn, PA 19061 in the amount of \$89,500.00. Since we have not worked with Hobbs and Company in the past, we contacted some of the references provided. All references contacted indicated their work to be satisfactory.

Based upon the above, we recommend that the Township award the contract to Hobbs and Company, Inc. in the low bid amount of \$89,500.00 contingent upon execution of the contract and supply of the required bonds and insurance.

Should you have any questions or comments, please do not hesitate to contact the undersigned.

Sincerely,

Comments:

Pricing as per the State of Pennsylvania Costars 13 Contract

2024 Ford F550 4x4 chassis with a cost of \$60,995 delivered to Haverford Township. Pricing is for one unit.

The payment would be due when the 2024 Ford F550 4x4 chassis is ready for delivery.

[Hondru Ford Costars Contract Number is 013-E23-280](#) [Hondru Ford Costars Vendor Number is 125126](#).

PRICE REFLECTS CURRENT PRICING AND GOV'T DISCOUNTS. MANUFACTURER CAN INCREASE PRICING AND DECREASE ALLOWANCES AT ANY TIME WITHOUT PRIOR NOTICE.

Upfit pricing can change depending on time it takes to build.

PRICING MUST BE VERIFIED PRIOR TO ORDERING

Due to constraints and manufacturer build capacity orders do not guarantee build availability.

Haverford Township Parks and Recreation Department Memorandum

(Formatted for Accessibility)

Date: August 27, 2024

To: David R. Burman, Township Manager

From: Brian Barrett, Director of Parks and Recreation

Subject: Jack McDonald Field Lights and Brookline Park Surfacing

Attached is a quote for the replacement of the field lights at Jack McDonald Field. Darby Creek Trail extension now runs along the road side of the field and the existing lights needed to be removed to site the trail. Denney Electric will install the lights for fall sports. Denney Electric is Costars with vendor #018-E22-017. The total cost is \$20,600.00 and will be paid with capital funds.

Also attached is a quote for safety surfacing for the playground equipment at Brookline Park. General Recreation will do the installation. They are Costars #122659. The total cost is \$94,255.00 and will be paid for with ARPA funds.

If there are any questions I will be on hand for the Board of Commissioner Work Session on September 3, 2024.

Adjourn

Haverford Township Board of Commissioners Regular Meeting Minutes

Meeting: Tuesday, October 15, 2024

Location: Commissioners Meeting Room
1014 Darby Road
Havertown, PA 19083

President of the Board, Larry Holmes, opened the meeting and announced that the Board met in Executive Session to discuss litigation immediately prior to this meeting and immediately prior to the Board's worksession held October 7, 2024.

Roll Call - All Commissioners were present at roll call: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta and Holmes.

Also present were Township Manager David R. Burman, Township Solicitor John Walko, Esq., Assistant Township Manager Aimee M. Cuthbertson, CPA, Chief of Police John Viola, Paramedics Chief Jim McCans, Director of Community Development Jaime Jilozian, Parks and Recreation Director Brian Barrett, and David Pennoni, Pennoni Associates.

Chief Viola led the Pledge of Allegiance.

Proclamations:

Haverford Skatium 50th Anniversary

Commissioner Gondek presented a proclamation honoring the Haverford Skatium on its 50th anniversary, highlighting its historical significance and contributions to the community.

Friends of the Library

Commissioner Forste-Grupp presented a proclamation for the contributions of the Friends of the Library, recognizing October 20-26 as Friends of Libraries Week.

Citizens' Forum:

Al Delmonte of Colfax Road addressed the Board about the noise from pickleball courts at Paddock Park and how it has negatively impacted his quality of life.

Paul Kelly spoke in opposition to the pickleball courts and expressed his concern that the noise from the pickleball courts is a violation of the Township's noise regulations.

Jim DeMarco of Colfax Road expressed opposition to the pickleball courts at Paddock Park and his opinion that an acceptable compromise is not possible. He based his opinions on engineering reports that indicate noise levels exceed legal limits with no solutions on the horizon.

Jeff Day of Preston Avenue spoke about the Safe Streets For All Resolution and specifically noted the intersection of Haverford Road and Buck Lane.

William Hitchcock of Tenby Road spoke on behalf of a subcommittee of the EAC and was pleased to see that many of their comments had already been included in the proposed amendment to the Stormwater Management Ordinance. Mr. Hitchcock offered written comments and asked that they be considered prior to adoption of the proposed amendment.

Peter Puglione commented on the proposed amendment to the Stormwater Management Ordinance.

Mike Lee offered his understanding that the Safe Streets For All Ordinance may be tabled this evening.

Kathleen Rowe of East Manoa Road thanked the Board of Commissioners on behalf of the Friends of the Library. There are 60 members of their group and they are actively trying to increase their membership.

Bureau of Fire Update:

Commissioner Gondek reported for September of 2024. Total incidents were 70: 47 in the Township and 13 out of the Township. The average personnel per call are 20. There were 1,335 personnel hours committed to incidents. 500 personnel hours committed to training, and the Havertown County Bureau of Fire provided mutual aid to 3 working fires within Delaware County and 1 working fire in Lower Merion Township during September.

Township Auditor Update

Township Auditor Anderson reported that he has reviewed the warrants and expenditures, found no irregularities, and all of his questions were answered to his satisfaction.

Township Manager Update

Township Manager Burman provided updates on various township activities, including the upcoming tree planting event and the 50th-anniversary project for the Haverford Skatium.

Approval of Minutes:

Commissioner Quinn moved to approve the Regular Meeting Minutes of September 9, 2024. Commissioner Gondek seconded. There were no comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner McCloskey moved to approve the following warrant #10-2024 totaling \$9,842,427.34:

Commissioner Trombetta moved to appoint Chris Whiting to the Haverford Township Naming Committee. Commissioner Quinn seconded the motion. Commissioner McCloskey moved to appoint Jamie Hawthorn to the Haverford Township Naming

Committee. Commissioner Forste-Grupp seconded the motion. Nominations were closed. Six Commissioners voted for Chris Whiting: Commissioners Gondek, Quinn, Hart, McCollum, Trombetta, Holmes. Three Commissioner voted for Jamie Hawthorn: Commissioners Forste-Grupp, McCloskey, Cavender.

Commissioner Trombetta moved to appoint Jamie Hawthorn to the Haverford Township Naming Committee. Commissioner Forste-Grupp seconded the motion. Commissioner Quinn moved to appoint Pat Boyle to the Haverford Township Naming Committee. Commissioner Hart seconded the motion. Nominations were closed. Five Commissioners voted for Jamie Hawthorn: Commissioners Forste-Grupp, McCloskey, Cavender, Trombetta, Holmes. Four Commissioners voted for Pat Boyle: Commissioner Gondek, Quinn, Hart, McCollum.

President Holmes reported that Alan Letofsky would serve as the 6th Ward representative to the Senior Citizens Advisory Committee.

Continuation of Citizen's Forum for Non-Agenda Items:

Paul Kelly expressed continued concerns about the noise from the pickleball courts at Paddock Park.

Peter Puglionese expressed additional opinions with regard to the proposed Stormwater Management Ordinance.

Camille Demarco expressed concerns regarding pickleball noise.

Todd Hall of Country Club Lane expressed concerns with noise generated by gas powered leaf blowers, and provided suggestions with regard to hours of parking at the Township Building for those using the Pennsy Trail.

Mike Lee expressed concerns about the Safe Streets for All Study and requested that it be posted on the Township's website.

New Business: None.

Other Business:

Under other business, each of the Commissioners offered their comments as follows:

Commissioner Gondek thanked all the various township employees and departments for putting together yet another spectacular Haverford Township Day. Commissioner Gondek also announced the leaf collection schedule. A Halloween event hosted by the

Westgate Civic Association would take place at Westgate Park on October 20th at noon. Commissioner Gondek asked everyone to remember that no matter what happens with the election, there are going to be people that are happy, and there are going to be people that are unhappy. But we all are going to be around the next day. We are all Americans.

Commissioner Forste-Grupp reported that the Chatham Park Daisy group recently visited the Township Building and earned their civic badges. The Commissioner thanked the Police Department and Township Administration for the tour. Commissioner Forste-Grupp related a touching story about voting and related issues, reminding everyone that we are all citizens of the United States.

Commissioner McCloskey reiterated some of the comments about the election. He reported that the library's Dewey Decimal Run fundraiser takes place on November 2nd. The Preliminary Budget for 2025 will be presented on November 18th.

Commissioner Cavender took a moment to recognize all of the employees and volunteers who work long hours at the polls on Election Day. She encouraged everyone to vote and make your voice heard.

Commissioner Quinn thanked everyone for a wonderful Haverford Township Day. He really enjoyed walking as a group with the other Commissioners. Commissioner Quinn reminded everyone that we are all friends, and we remain friends, after the election.

Commissioner Hart reported that the Haverford Township Historical Society's annual Oktoberfest will take place on October 25th at Nitre Hall. The Penfield Civic Association will show the Disney Pixar Movie Inside Out II under the stars at the Grange on October 26th. He thanked Manager Burman for his perseverance in getting the City Avenue sidewalk connector awarded.

Commissioner McCollum reported that the seniors Karaoke at the CREC will take place on October 28th. The Police K9 competition will take place at the Middle School on November 3rd. Commissioner McCollum thanked the Bureau of Fire members who brought forth the opportunity to donate a retired piece of apparatus to a fire company that lost all of their apparatus in flood earlier this year.

Commissioner Trombetta thanked the neighbors of Paddock Park for their continued engagement on the pickleball complaints. The senior citizens advisory board will host a health and fitness open house for older adults at the CREC on November 3rd. Commissioner Trombetta acknowledged that this October carries deep significance for the Jewish community. Recently, Rosh Hashanah was celebrated, followed by observance of Yom Kippur, the holiest day of the year. In addition, October 7th marked the 1 year anniversary of the tragic attacks on Israel. And later this a, on October 27th, we

remember the victims of the Tree of Life a shooting at Pittsburgh. She urged out State legislators to take action on four anti-hate crime bills. She thanked the people of Haverford Township for their continued support of our diverse communities. Let's continue to stand together in unity, not only in remembrance, but in action, ensuring that our community remains 1 of inclusion and respect for all.

President Holmes read aloud a heartfelt note he wrote to his son, stating that he hasn't been in this office for 19 years to hold back. It included words of observation and advice to his son as he cast his ballot in the election.

With no further business, the meeting adjourned.

National Friends of Libraries Week
Friends of the Haverford Township Free Library Proclamation
October 2024

Whereas, Friends of the Haverford Township Free Library raise money that enables our library to move from good to great -- providing the resources for additional programming, much needed equipment, support for children's summer reading, and special events throughout the year; and,

Whereas, The Friends of the Library group has been active for 21 years and have volunteered for thousands to support our library, fostering a strong partnership between the library and the community and demonstrating how volunteerism leads to positive civic engagement and the betterment of our community; and,

Whereas, The Friends of the Library understand the critical importance of well-funded libraries and advocate to ensure that our library gets the resources it needs to provide a wide variety of services to all ages including access to print and electronic materials, along with expert assistance in research, readers' advisory, and children's services; and,

Whereas, The Friends of the Library group have hosted regular book sales since its inception in 2003, generating over \$240,000 for library programs and services. Proceeds from these sales have been used to support special events, summer reading programs, author talks and children's programs, the purchase of new materials, special technology and equipment such as camcorders, digital cameras, printers, and wireless equipment, as well as expand the Library's Museum Passes collections which allows families to visit places such as the National Constitution Center, the Please Touch Museum and many more; and,

Whereas, the work of the Friends highlights on an on-going basis the fact that our library is the cornerstone of the community providing opportunities for all to engage in the joy of life-long learning and connect with the thoughts and ideas of others from ages past to the present.

Now, therefore, be it resolved that The Haverford Township Board of Commissioners proclaims October 20-26, 2024, as Friends of Libraries week in Haverford Township and urges everyone to join the Friends of the Library and thank them for all they do to make our library and community so much better.

Proclaimed this 15th day of October, 2024.

Proclamation Honoring The Haverford Skatium - Celebrating 50 Years

Whereas, the Board of Commissioners of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania wish to recognize and celebrate the 50th Anniversary of the Township of Haverford Skatium; and

Whereas, the Skatium, located in Haverford Township, Pennsylvania, has a rich history as a community hub for skating and recreational activities. Opened in 1974, it quickly became a proud symbol of Havertown and a popular destination for families and local residents; and

Whereas, the Skatium's popularity grew and its offerings expanded to include not only recreational skating but also lesson offerings, youth and adult hockey leagues, summer camps, a pro shop, a snack bar, and became an official Learn to Skate USA® program site; and

Whereas, in addition to skating, the Skatium has hosted various community events, including birthdays, fundraisers, figure skating showcases, instructional hockey clinics, the Eastern Adult Sectionals Figure Skating Competition, and the Pennsylvania State High School Hockey Championships, making it a notable venue that fosters a sense of camaraderie among its visitors. Its enduring popularity has made it a cherished part of not only Haverford Township's but of the region's recreational landscape; and

Whereas, the Skatium has been the long-time home of the Haverford Ice Hockey Club, Crossroads Figure Skating Club, the Haverford Hawks Ice Hockey Club, the ICSHL and the St Joseph's University hockey team. The Skatium has been the backdrop for the development of countless young figure skaters, hockey players, coaches, teams and leagues; and

Now, therefore, be it Proclaimed, that the Board of Commissioners and our entire community wish the Skatium a very happy 50th Anniversary with many more years as an iconic landmark in Haverford Township!

Township of Haverford

Ordinance Number P8-2024

Amending Chapter 78 – Erosion and Sediment Control – Stormwater Management

AN ORDINANCE OF THE TOWNSHIP OF HAVERFORD, DELAWARE COUNTY, AMENDING CHAPTER 78, “EROSION AND SEDIMENT CONTROL; STORMWATER MANAGEMENT”, TO PROVIDE FOR AMENDED EROSION AND SEDIMENT CONTROL PLAN, PERMIT, APPLICATION, AND INSPECTION REQUIREMENTS; TO ENSURE MUNICIPAL SEPARATE STORM SEWER SYSTEM COMPLIANCE WITH THE PENNSYLVANIA DEPARTMENT OF ENVIRONMENTAL PROTECTION INCLUDING A REDUCTION OF THE THRESHOLD FOR A CERTAIN STORMWATER REVIEWS BY THE TOWNSHIP FOR PROJECTS INVOLVING NEW IMPERVIOUS SURFACES OF 500 SQUARE FEET OR MORE, INCREASE THE FREQUENCY OF BMP INSPECTIONS, AND CHANGE THE METHOD OF STORMWATER CALCULATIONS.

WHEREAS, the Home Rule Charter of the Township of Haverford (“Township”) and the Pennsylvania First Class Township Code authorize the Haverford Township Board of Commissioners (“Board”) to make and adopt ordinances consistent with the constitution and laws of this Commonwealth and with the Haverford Township Charter (“Charter”) when necessary for the proper management, care and control of the Township and the maintenance of peace, good government, health and welfare of the Township and its citizens; and

WHEREAS, the Haverford Township Code, Chapter 78, “Erosion and Sediment Control; Stormwater Management”, provides for erosion and sedimentation control and stormwater management requirements for projects and developments in the Township to, in part, better control stormwater runoff in the Township, minimize accelerated erosion and loss of natural infiltration, and to ensure compliance with all commonwealth and federal agencies; and

WHEREAS, the Board desires to ensure that Chapter 78 complies with all revised Municipal Separate Storm Sewer System requirements from the Pennsylvania Department of Environmental Protection; and

WHEREAS, the Board desires to amend the thresholds in Chapter 78 that require differing levels of review by the Township for projects involving grading, excavation, and/or the installation of new imperious surfaces; and

WHEREAS, to protect the health, safety, and welfare of the residents and visitors of Haverford Township, and to arrange for the orderly development, zoning, and use of properties within the Township, the Board of desires to amend Chapter 78 of its Code, in its entirety, to provide revisions pertaining to erosion and sedimentation control and stormwater management plan, permit, application, and inspection requirements;

WHEREAS, the Board has met the procedural requirements of the Charter for the adoption of the proposed ordinance, including advertising and multiple readings of the ordinance at public meetings; and

NOW, THEREFORE, be it ORDAINED and ENACTED by the Haverford Township Board of Commissioners, Chapter 78 of Haverford Township Code of Ordinances shall be amended in its entirety and replaced pursuant to the articles and sections as set forth below:

SECTION I: AMENDMENTS TO CODE. The Haverford Township Code of Ordinances, Chapter 78, "Erosion and Sediment Control; Stormwater Management", is hereby amended to provide as follows:

CHAPTER 78 Erosion and Sediment Control; Stormwater Management

ARTICLE I. Erosion and Sediment Control.

§ 78-1. Short title.

This chapter shall be known and may be cited as the "Township of Haverford Erosion and Sediment Control Ordinance."

§ 78-2. Purpose and Scope.

- A. The purpose of this chapter is to regulate the modification of the natural terrain, the alteration of drainage, the maintenance of artificial structures and surfaces and to provide for certain erosion and sediment control measures within the Township of Haverford so as to assure and safeguard health, safety, ecology and general welfare in the Township of Haverford.
- B. Scope of provisions. New grading, excavations and fills or changes, additions, repairs or alterations made to existing excavations and fills shall conform to the provisions of this chapter, except that this chapter shall not apply to work performed by the Township in a public street or on public property.

§ 78-3. Erosion and sediment control plans required; exceptions.

- A. A grading permit will not be required in the following situation, but in all other respects the provisions of this chapter shall apply:
- B. An excavation which does not exceed three feet in vertical depth at its deepest point measured from the natural ground surface nor cover an area of more than 200 square feet. This exception shall not affect the applicability of this chapter nor the requirement of a grading permit for any fill or grading made with the material from such excavation.

§ 78-4. Permit required.

- A. It shall be unlawful for any person, firm or corporation to pave, fill, strip, grade or regrade any land within the Township of Haverford without first securing a permit as hereunder provided, except as otherwise stated in 78-3.
- B. It shall be unlawful for any person, firm or corporation to disturb, modify, block, divert or affect the natural overland or subsurface flow of stormwater within the Township of Haverford without first securing a permit as hereunder provided.

- C. It shall be unlawful for any person, firm or corporation to construct, erect or install any drainage dam, ditch, culvert, drainpipe, bridge or any other structure or obstruction affecting the drainage of any premises in the Township of Haverford without first securing a permit as hereunder provided.

§ 78-5. Permit Application.

- A. Any person, firm or corporation proposing to engage in an activity requiring a permit hereunder shall apply for a permit by written application on a form furnished by the Township of Haverford.
- B. A separate application shall be required for each grading permit. Two hard copies and one digital copy of the proposed plan, including specifications and timing schedules, shall be submitted with each application for a permit.
- C. Applications for review required under this chapter shall be accompanied by a review fee as fixed by resolution of the Board of Commissioners, which may be amended from time to time.
- D. All applications for a permit involving an area of disturbance greater than 500 square feet shall be accompanied by a escrow deposit, to the benefit of the Township of Haverford in an amount as provided by Township resolution.

§ 78-6. Submission of property plan; information required.

The application for a permit shall be accompanied by a plan of the property showing:

A boundary line survey of the site on which the work is to be performed, showing the existing and proposed contours of the land and the proposed contours after completion of proposed grading.

- A. A description of the features, existing and proposed, surrounding the site which are of importance to the proposed development, including the nature of fill material and trees to be removed as a result of the proposed construction
- B. Description of the type and classification of the soil.
- C. Details and location of any proposed drainage structures and pipes.
- D. The lowest floor elevation of any proposed building based upon North American Vertical Datum of 1988 and the elevation of the one-hundred-year flood.
- E. The location and description of existing and future manmade features of importance to the proposed development, i.e., cuts and fills, buildings, roads, etc.
- F. Plans and specifications of soil erosion and sediment control measures in accordance with standards and specifications of the Delaware County Conservation District or the Township of Haverford.
- G. A time schedule indicating the anticipated starting and completion dates of the development sequence and the time of exposure of each area prior to the completion of effective erosion and sediment control measures.
- H. All plans and specifications accompanying applications for permits shall include

provisions for both interim (temporary) and ultimate (permanent) erosion and sediment control.

- (1) The design, installation and maintenance of erosion and sediment control measures shall be accomplished in accordance with standards and specifications established by the Delaware County Conservation District as adapted from standards and specifications of the Soil Conservation Service, United States Department of Agriculture.
- (2) Technical standards for the design and installation of erosion and sediment control measures are on file with the Township of Haverford office, the office of the Delaware, County Conservation District and other governmental agency offices.
- (3) Standards and specifications adopted for the purposes of this chapter and by the Delaware County Conservation District include but are not limited to the following basic conservation measures:
 - (a) Temporary cover on critical areas.
 - (b) Permanent grass and cover on critical areas on prepared seedbed.
 - (c) Permanent grass and cover on critical areas on unprepared seedbed.
 - (d) Sodding.
 - (e) Mulching.
 - (f) Temporary diversion.
 - (g) Permanent diversion.
 - (h) Grassed waterway or outlet.
 - (i) Grade stabilization structure.
 - (j) Debris basin.
 - (k) Drain.
 - (l) Drainage, main or lateral.

§ 78-7. Submission of drainage study; contents; disposal of stormwater runoff; soils investigation report.

A. Stormwater management plans shall be as required in this chapter.

- (1) The application for a permit shall be accompanied by a plan of the property showing the location of all present and proposed ditches, streams, pipes and other drainage structures and proposed cuts and fills. In addition to showing present elevations and dimensions and location and extent of all proposed grading and/or drainage, the plan shall clearly indicate all buildings, parking areas and driveways. Further, the plan shall indicate the present and proposed sources, storage and disposition of water being channeled through or across the premises, together with elevations, gradients and maximum flow rates. The application shall describe

the work to be performed, the materials to be used and the manner or method of performance, including provisions for protecting and maintaining existing drainage facilities whether on public or private property. The applicant shall supply data supporting the plan developed by a registered professional civil engineer or an engineer qualified in hydrology.

(2) Stormwater management plans shall be prepared in accordance with this chapter.

B. The following provisions apply to the carrying and disposal of stormwater runoff:

(1) The applicant shall agree to the granting and recording of easements for drainage facilities, including acceptance of the discharge of water on the property of others, provisions for maintenance of slopes and swales and access for the maintenance of anti-erosion facilities.

C. If load-bearing fill is proposed, a soils investigation report shall be submitted, which shall consist of test borings, laboratory testings and engineering analysis to correlate surface and subsurface conditions with the proposed grading plan. The results of the investigation shall be presented in a report by a registered professional soils engineer or geologist, which shall include data regarding the nature, distribution and supporting ability of existing soils and rocks on the site, conclusions and recommendations to ensure stable soil conditions and groundwater control, as applicable. The Township of Haverford may require such supplemental reports and data as it deems necessary. Recommendations included in such reports and approved by the Township of Haverford shall be incorporated in the plan or specifications.

(1) Fills toeing out on natural slopes steeper than four horizontal to one vertical shall not be made unless approved by the Township of Haverford after receipt of a report, deemed acceptable by the Township of Haverford Engineer, by a registered professional soils engineer certifying that he has investigated the property, made soil tests and that, in his opinion, such steeper slopes will safely support the proposed fill.

(2) Natural and/or existing slopes exceeding five horizontal to one vertical shall be benched or continuously stepped into competent materials prior to placing all classes of fill.

§ 78-8. Issuance of permit.

Upon the submission of an application which conforms to the provisions of this chapter, the Director of Code Enforcement or their designee, after consultation with the Township of Haverford Engineer, shall issue the necessary permit.

§ 78-9. Performance standards.

A. Notwithstanding any provision of this chapter or any condition of the permit, the permittee is responsible for the prevention of damage to other property or personal injury which may be affected by the activity requiring a permit.

B. No person, firm or corporation shall modify, fill, excavate, pave, grade or regrade land in any manner so close to a property line as to endanger or damage any adjoining

street, sidewalk, alley or any other public or private property without supporting and protecting such property from settling, cracking, erosion, sediment or other physical damage or personal injury which might result.

- C. No person, firm or corporation shall deposit or place any debris or any other material whatsoever or to cause such to be thrown or placed in any drainage ditch or drainage structure in such a manner as to obstruct free flow.
- D. No person, firm or corporation shall fail to adequately maintain in good operating order any drainage facility on his premises. All drainage ditches, culverts, drainpipes and drainage structures shall be kept open and free-flowing at all times.
- E. The owner of any property on which any work has been done pursuant to a permit granted under this chapter shall continuously maintain and repair all graded surfaces and antierosion devices, retaining walls, drainage structures or means and other protective devices, plantings and ground cover installed or completed.
- F. All graded surfaces shall be seeded, sodded and/or planted or otherwise protected from erosion within 60 days and shall be watered, tended and/or maintained until growth, in the case of vegetation, is well established. The disturbed area and duration of exposure shall be kept to a practical minimum.
- G. All trees in the area of extreme grade change shall be removed unless protected with suitable tree wells. However, extreme precautions shall be taken to prevent the unnecessary removal of trees.
- H. When required, adequate provisions shall be made for dust control measures as are deemed acceptable by the Township of Haverford.
- I. A quality control program is critical for fills, therefore, whenever fill material is to be used, each layer of compacted fill should be tested to determine its dry density as per ASTM D 1556. The density of each layer should not be less than 95% of maximum dry density as determined by ASTM D 1557.
 - (1) Inspection procedure shall follow the general procedure as stated in § 78-10.
 - (2) Compaction test reports shall be kept on file at the site and shall be subject to review at all times.
 - (3) The degree of compaction required shall be determined by the Township of Haverford Engineer following the guidelines in Subsection J above.
 - (4) Where the provisions of Subsection J are determined to be inapplicable, they may be waived by the Township of Haverford Engineer.

§ 78-10. Inspections; availability and inspection of as-built plans; issuance of occupancy permit.

- A. The Township Engineer shall, when requested by the Director of Code Enforcement or their designee, make inspections hereinafter required and shall either approve that portion of the work which has been completed or notify the permit holder wherein the same fails to comply with the provisions of this chapter. Where it is found by inspection that the conditions are not as stated or shown in the application, the Township

Engineer may refuse to approve further work until approval is obtained for a revised grading plan.

- B. Plans for the grading work shall be approved by the Township Engineer and shall be maintained at the site during the progress of the grading work and until the work has been approved.
- C. The permit holder shall notify the Township Engineer in order to obtain inspections, in accordance with the following schedule, at least 48 hours before the inspection is to be made:
 - (1) Initial inspection. When work on the excavation or fill is about to be commenced.
 - (2) Rough grading. When all rough grading has been completed.
 - (3) Drainage facilities. When drainage facilities are to be installed and before such facilities are backfilled.
 - (4) Special structures. When excavations are complete for retaining and crib walls, and when reinforcing steel is in place and before concrete is poured.
 - (5) Final inspection. When all work, including the installation of all drainage and other structures, has been completed.
- D. If at any of the work the Township Engineer shall determine by inspection that the nature of the grading is not in accordance with the approved permit or is not functioning as designed and/or is likely to endanger property or streets or alleys or create hazardous conditions, the Township Engineer may require, as a condition to allowing the work to be done, that such reasonable safety precautions be taken as the Township Engineer considers advisable to avoid such likelihood of danger. Safety precautions may include but shall not be limited specifying a flatter exposed slope, construction or additional drainage facilities, berms, terracing, compaction or cribbing.
- E. Any and all as-built plans shall be available on the site at all times and be subject to inspection and inquiry.
- F. Satisfactory compliance with this chapter shall be necessary before issuance of an occupancy permit.

§ 78-11. Payment of inspection costs by applicant; deposit of sum to cover costs required.

All applicants shall bear all cost of inspections required hereunder and shall deposit with the Director of Finance such sum as the Director of Code Enforcement shall determine to be necessary to guarantee payment of the cost of such inspections.

§ 78-12. Violations and penalties.

Any person, firm or corporation violating any provision of this article shall, upon summary conviction before any District Justice of the Peace, pay a fine not exceeding \$1,000 and costs of prosecution; and in default of one payment of the fine and costs, the violator may be sentenced to the county jail for a term of not more than 90 days. Each and every day in which any person, firm or corporation shall be in violation of this article shall constitute a

separate offense.

Article II

Stormwater Management General Provisions

§ 78-13. Short Title.

This Ordinance shall be known and may be cited as the “Township of Haverford Stormwater Management Ordinance.”

§ 78-14. Statement of Findings.

The Board of Commissioners of Haverford Township finds that:

- A. Inadequate management of accelerated runoff of stormwater resulting from development throughout a watershed increases runoff volumes, flows and velocities, contributes to erosion and sedimentation, overtaxes the carrying capacity of streams and storm sewers, greatly increases the cost of public facilities to carry and control stormwater, undermines flood plain management and flood control efforts in upstream and downstream communities, infiltration, threatens public health and safety, and increases nonpoint source pollution of water resources.
- B. Inadequate planning and management of stormwater runoff resulting from land development throughout a watershed can also harm surface water resources by changing the natural hydrologic patterns, accelerating stream flows (which increase scour and erosion of streambeds and streambanks, thereby elevating sedimentation), destroying aquatic habitat, and elevating aquatic pollutant concentrations and loadings such as sediments, nutrients, heavy metals, and pathogens. Groundwater resources are also impacted through loss of recharge.
- C. A comprehensive program of stormwater management (SWM), including minimization of impacts of development, redevelopment, and activities causing accelerated runoff, is fundamental to the public health, safety, and welfare and the protection of people of the Commonwealth, their resources, and the environment.
- D. Stormwater is an important water resource by providing infiltration for water supplies and supports the base flow of streams, which also protects and maintains surface water quality.
- E. Impacts from stormwater runoff can be minimized by using project designs that maintain the natural hydrologic regime and sustain high water quality, infiltration, stream baseflow, and aquatic ecosystems. The most cost-effective and environmentally advantageous way to manage stormwater runoff is through nonstructural project design that minimizes impervious surfaces and sprawl, avoids sensitive areas (i.e., stream buffers, floodplains, steep slopes), and considers topography and soils to maintain the natural hydrologic regime.
- F. Public education on the control of pollution from stormwater is an essential component in successfully addressing stormwater.
- G. Federal and state regulations require certain municipalities to implement a program

of stormwater controls. These municipalities are required to obtain a permit for stormwater discharges from their separate storm sewer systems under the National Pollutant Discharge Elimination System (NPDES) program.

- H. Nonstormwater discharges to municipal separate storm sewer systems can contribute to pollution of waters of the commonwealth by Haverford Township.
- I. The use of green infrastructure and low impact development (LID) are intended to address the root cause of water quality impairment by using systems and practices which use or mimic natural processes to: 1) infiltration and recharge, 2) evapotranspire, and/or 3) harvest and use precipitation near where it falls to earth. Green infrastructure practices, LID, and Cluster Development (CD) contribute to the restoration or maintenance of pre-development hydrology.

§ 78-15. Purpose.

The purpose of this ordinance is to promote the public health, safety, and general welfare, property, and water quality by implementing drainage and stormwater management practices, criteria, and provisions included herein for land development, construction, and Earth Disturbance Activities, to achieve the following throughout the Township:

- A. Promote alternative project designs and layouts that minimize the impacts on surface and groundwater.
- B. Promote nonstructural best management practices (BMPs).
- C. Minimize increases in runoff stormwater volume.
- D. Minimize impervious surfaces.
- E. Manage accelerated stormwater runoff and erosion and sedimentation problems and stormwater runoff impacts at their source by regulating activities that cause these problems.
- F. Provide review procedures and performance standards for stormwater planning and management.
- G. Utilize and preserve existing natural drainage systems as much as possible.
- H. Manage stormwater impacts close to the runoff source, requiring a minimum of structures and relying on natural processes.
- I. Focus on infiltration of stormwater to maintain base flow, to prevent degradation of surface and groundwater quality, and to otherwise protect water resources.
- J. Protect base flows and quality of streams and watercourses, where possible.
- K. Meet legal water quality requirements under state law, including regulations at 25 Pennsylvania Code Chapter 93 to protect, maintain, reclaim, and restore the existing and designated uses of the Waters of the Commonwealth.
- L. Address the quality and quantity of stormwater discharges from the development site.
- M. Provide standards to meet certain NPDES MS4 permit requirements.

- N. Implement an illicit discharge detection and elimination program that addresses non-stormwater discharges into the Municipality's separate storm sewer system (MS4).
- O. Preserve the flood-carrying capacity of streams.
- P. Protect water quality by removing and/or treating pollutants prior to discharge to ground- and surface waters throughout Haverford Township, and to protect, restore, and maintain the chemical, physical, and biological quality of ground and surface waters.
- Q. Reduce flooding impacts and prevent a significant increase in surface runoff rates and volumes, pre-development to post-development, which could worsen flooding downstream in the watershed, enlarge floodplains, erode stream banks, and create other flood-related health, welfare or property losses; in general, to preserve and restore the natural flood-carrying capacity of streams and their floodplains.
- R. Prevent accelerated scour, erosion and sedimentation of stream channels.
- S. Provide performance standards and design criteria based on watershed-wide stormwater management planning.
- T. Provide proper operation and maintenance of all permanent stormwater management facilities and BMPs that are implemented within the Township.
- U. Implement the requirements of Total Maximum Daily Loads (TMDLs) where applicable to waters within or impacted by the Township.

§ 78-16. Statutory Authority.

The Township is empowered or required to regulate land use activities that affect runoff and surface and groundwater quality and quantity by the authority of:

- A. Act of October 4, 1978, 32 P.S., P.L. 864 (Act 167) § 680.1 et seq., as amended, the "Stormwater Management Act" (hereinafter referred to as "the Act");
- B. Water Resources Management Act of 2002, as amended;
- C. First Class Township Code, 53, Section 55101 et seq;
- D. Act of July 31, 1968, P.L. 805, No. 247, Pennsylvania Municipalities Planning Code, Act 247, as amended.

§ 78-17. Applicability/regulated activities.

All regulated activities and all activities that may affect stormwater runoff, including but not limited to land development, redevelopment, and earth disturbance activity located within the municipality, are subject to regulation by this Ordinance.

- A. This article shall apply to all areas of Haverford Township.
- B. This article shall only apply to permanent structural and nonstructural stormwater management BMPs constructed as part of any of the regulated activities listed in this section.
- C. This article contains only the stormwater management performance standards and design criteria that are necessary or desirable from a watershed-wide perspective.

Local stormwater management design criteria (e.g., inlet spacing, inlet type, collection system design and details, outlet structure design, etc.) shall continue to be regulated by the applicable municipal ordinances and applicable state regulations.

D. The following activities are defined as "regulated activities" and shall be regulated by this article unless exempted by § 78-18:

1. Land development.
2. Subdivisions.
3. Alteration of the natural hydrologic regime.
4. Construction or reconstruction of or addition of new impervious surfaces (i.e., driveways, parking lots, roads, etc.).
5. Construction of new buildings or additions to existing buildings.
6. Redevelopment.
7. Diversion piping or encroachments in any natural or man-made channel.
8. Nonstructural and structural stormwater management BMPs or appurtenances thereto.
9. Earth disturbance activities of greater than 5,000 square feet.
10. Earth disturbances within 50 feet of other sensitive environmental features, such as streams, ponds, lakes and wetlands.
11. Any of the above regulated activities which were approved more than five years prior to the effective date of this article and resubmitted for municipal approval.

Table 105.1 summarizes the applicability requirements of the ordinance. "Regulated impervious surface" in Table 105.1 includes new, additional, or replacement impervious surface/cover. Repaving existing surfaces without reconstruction does not constitute "replacement."

§ 78-18. Exemptions.

Exemptions for land use activities. An exemption shall not relieve the Applicant from implementing the requirements of the municipal Ordinance or from implementing such measures as are necessary to protect public health, safety, and property. An exemption shall not relieve the Applicant from complying with the special requirements for watersheds draining to identified high quality (HQ) or exceptional value (EV) waters or any other current or future state or municipal water quality protection requirements. If a drainage problem is documented or known to exist downstream of, or is expected from the proposed activity, then the Municipality may withdraw exemptions listed in Table 105.1 and require the Applicant to comply with all requirements of this Ordinance. Even though the Applicant is exempt, he is not relieved from complying with other municipal ordinances or regulations.

Table 105.1 summarizes the exemptions from certain provisions of this Ordinance.

Exemptions are for the items noted in Table 105.1 only, and shall not relieve the Applicant from other applicable sections of this Ordinance.

Any regulated activity that is exempt from some provisions of the Ordinance is exempt only from those provisions. If development is to take place in phases, the developer is responsible for implementing the requirements of the Ordinance as the impervious cover/earth disturbance threshold is met. The date of the municipal Ordinance adoption shall be the starting point from which to consider tracts as “parent tracts” in which future subdivisions and respective impervious area and earth disturbance computations shall be cumulatively considered. Exemption shall not relieve the applicant from implementing such measures as are necessary to protect health, safety, and property. For example:

If a property owner proposed a 150 square foot shed after adoption of the municipal stormwater management ordinance, that property owner be exempted from the water quality and quantity requirements of the ordinance as noted in Table 105.1 of the ordinance. If, at a later date, the property owner proposes to construct a 499 square foot room addition, the applicant would be required to comply with the requirements for the Simplified Method for the full 649 square feet of impervious cover created since adoption of the municipal ordinance. If an additional 700 square foot swimming pool/patio is proposed later, the property owner would be required implement the full stormwater quantity and quality control submission requirements of this ordinance for the total 1, 349 square feet of additional impervious surface added to the original property since adoption of the municipal ordinance.

A. Exemptions for land use activities. The following land use activities are exempt from the SWM site plan submission requirements of this article:

(1) Use of land for gardening for home consumption.

(2) Agriculture when operated in accordance with a conservation plan, nutrient management plan, or erosion and sedimentation control plan approved by the County Conservation District, including activities such as growing crops, rotating crops, tilling of soil, and grazing animals. Installation of new or expansion of existing farmsteads, animal housing, waste storage, and production areas having impervious surfaces that result in a net increase in earth disturbance of greater than 5,000 square feet shall be subject to the provisions of this article.

(3) High Tunnel if:

a. The High Tunnel or its flooring does not result in an impervious surface exceeding 25% of all structures located on the Landowner’s total contiguous land area; and

b. The High Tunnel meets one of the following:

i. The High Tunnel is located at least 100 feet from any perennial stream or watercourse, public road, or neighboring property line.

ii. The High Tunnel is located at least 35 feet from any perennial stream or watercourse, public road or neighboring property line and located on land with a slope not greater than 7%.

- iii. The High Tunnel is supported with a buffer or diversion system that does not directly drain into a stream or other watercourse by managing stormwater runoff in a manner consistent with the requirements of Pennsylvania Act 167.

(4) Forest management operations which are following the Department of Environmental Protection's (DEP) management practices contained in its publication "Soil Erosion and Sedimentation Control Guidelines for Forestry" and are operating under an approved erosion and sedimentation plan and must comply with the stream buffer requirements in § 78-42.

(4) Road replacement, development, or redevelopment that has less than 1,000 square feet of new, additional, or replaced impervious surface/cover, or in the case of earth disturbance only, less than 5,000 square feet of disturbance, is exempt from this article.

(5) Repaving without reconstruction.

(6) Construction, development, redevelopment, road replacement, or other operations of or by the Township.

B. Exemptions for land development activities.

(1) The following land development and earthmoving activities are exempt from the SWM site plan submission requirements of this article.

- (a) A maximum of 500 square feet of new, additional, or replacement proposed impervious surface.

- (b) Up to a maximum of 5,000 square feet of disturbed earth.

(2) These criteria shall apply to the total development even if the development is to take place in phases. The date of the municipal ordinance adoption shall be the starting point from which to consider tracts as "parent tracts" upon which future subdivisions and respective earth disturbance computations shall be cumulatively considered.

The activities exempted above are still encouraged to implement the stormwater management practices as indicated in Appendix B.

(3) The developer should first determine if the proposed activity will result in the introduction of 500 square feet or more of new, additional, or replacement impervious surface. If not, the developer should next determine if the proposed activity will involve earthmoving of over 5,000 square feet. If not, then the project is exempt from the SWM site plan requirements. Examples:

- (a) A project introducing 500 square feet of impervious cover, but only 4,900 square feet of earthmoving is regulated by this article.

- (b) A project involving 5,100 square feet of earthmoving, but resulting in 400 square feet of impervious cover is regulated.

- (c) A project introducing 400 square feet of impervious cover and involving 4,900 square feet of earthmoving is exempt from the SWM site plan requirements of this article.

C. Additional exemption criteria:

- (1) Exemption responsibilities. An exemption shall not relieve the applicant from implementing such measures as are necessary to protect public health, safety, and property.
- (2) HQ and EV streams. An exemption shall not relieve the applicant from meeting the special requirements for watersheds draining to identified high quality (HQ) or exceptional value (EV) waters and source water protection areas (SWPA) and requirements for nonstructural project design sequencing (§ 78-33).
- (3) Drainage problems. If a drainage problem is documented or known to exist downstream of or is expected from the proposed activity, then Haverford Township may require the applicant to comply with this article.
- (4) Emergency exemption. Emergency maintenance work performed for the protection of public health, safety, and welfare. A written description of the scope and extent of any emergency work performed shall be submitted to the Township of Haverford within two calendar days of the commencement of the activity. If the Township of Haverford finds that the work is not an emergency, then the work shall cease immediately, and the requirements of this article shall be addressed as applicable.
- (5) Maintenance exemption. Any maintenance to an existing stormwater management system made in accordance with plans and specifications approved by the Township Engineer or the Township of Haverford.
- (6) Even though the developer is exempt, they are not relieved from complying with other regulations.

§78-19. Repealer.

Any other ordinance provision(s) or regulation of the municipality inconsistent with any of the provisions of this Ordinance is hereby repealed to the extent of the inconsistency only.

§ 78-20. Severability.

In the event that a court of competent jurisdiction declares any section or provision of this ordinance invalid, such decision shall not affect the validity of any of the remaining provisions of this Ordinance.

§ 78-21. Compatibility with other ordinances or legal requirements.

- A. Approvals issued and actions taken under this Ordinance do not relieve the applicant of the responsibility to secure required permits or approvals for activities regulated by any other code, law, regulation or ordinance.
- B. To the extent that this article imposes more rigorous or stringent requirements for stormwater management, the specific requirements contained in this article shall be followed.
- C. Nothing in this article shall be construed to affect any of Haverford Township's requirements regarding stormwater matters that do not conflict with the provisions of this article, such as local stormwater management design criteria (e.g., inlet

spacing, inlet type, collection system design and details, outlet structure design, etc.). Conflicting provisions in other municipal ordinances or regulations shall be construed to retain the requirements of this article addressing state water quality requirements. The requirements of this Ordinance shall supersede any conflicting requirements in other municipal ordinances or regulations.

§ 78-22. Erroneous Permit.

Any permit or authorization issued or approved based on false, misleading or erroneous information provided by an applicant is void without the necessity of any proceedings for revocation. Any work undertaken or use established pursuant to such permit or other authorization is unlawful. No action may be taken by a board, agency or employee of the Township purporting to validate such a violation.

§ 78-23. Waivers.

- A. If the Township determines that any requirement under this Ordinance cannot be achieved for a particular regulated activity, the Township may, after an evaluation of alternatives, approve measures other than those in this Ordinance, subject to Section § 78-22, Waivers; paragraphs B and C.
- B. Waivers or modifications of the requirements of this Ordinance may be approved by the Township if enforcement will exact undue hardship because of peculiar conditions pertaining to the land in question, provided that the modifications will not be contrary to the public interest and that the purpose of the Ordinance is preserved. Cost or financial burden shall not be considered a hardship. Modification may be considered if an alternative standard or approach will provide equal or better achievement of the purpose of the Ordinance. A request for modifications shall be in writing and accompany the Stormwater Management Site Plan submission. The request shall provide the facts on which the request is based, the provision(s) of the Ordinance involved and the proposed modification.
- C. No waiver or modification of any regulated stormwater activity involving earth disturbance greater than or equal to one acre may be granted by the Township unless that action is approved in advance by the Department of Environmental Protection (DEP) or the Delaware County Conservation District.

§ 78-24. Word Usage.

For the purposes of this article, certain terms and words used herein shall be interpreted as follows:

- A. Words used in the present tense include the future tense; the singular number includes the plural, and the plural number includes the singular; words of masculine gender include feminine gender or nonbinary; and words of feminine gender include masculine gender or nonbinary.
- B. The word "includes" or "including" shall not limit the term to the specific example but is intended to extend its meaning to all other instances of like kind and character.
- C. The word "person" includes an individual, firm, association, organization, partnership, trust, company, corporation, unit of government, or any other similar entity.

- D. The words "shall" and "must" are mandatory; the words "may" and "should" are permissive.
- E. The words "used" or "occupied" include the words "intended, designed, maintained, or arranged to be used, occupied, or maintained."

As used in this article, the following terms shall have the meanings indicated:

ACCELERATED EROSION

The removal of the surface of the land through the combined action of man's activity and the natural processes at a rate greater than would occur because of the natural process alone.

AGRICULTURAL ACTIVITY

Activities associated with agriculture such as agricultural cultivation, agricultural operation, and animal heavy use areas. This includes the work of producing crops including tillage, land clearing, plowing, disking, harrowing, planting, harvesting crops or pasturing and raising of livestock and installation of conservation measures. Construction of new buildings or impervious area is not considered an agricultural activity.

ALTERATION

As applied to land, a change in topography as a result of the moving of soil and rock from one location or position to another; also the changing of surface conditions by causing the surface to be more or less impervious; land disturbance.

APPLICANT

A landowner, developer, or other person who has filed an application to the municipality for approval to engage in any regulated activity at a project site in the municipality. The Township shall not be considered an Applicant under this Ordinance.

AS-BUILT DRAWINGS

Engineering or site drawings maintained by the contractor as he constructs the project and upon which he documents the actual locations of the building components and changes to the original contract documents. These documents, or a copy of same, are turned over to the municipal Engineer at the completion of the project.

BANKFULL

The channel at the top-of-bank or point from where water begins to overflow onto a floodplain.

BASEFLOW

Portion of stream discharge derived from groundwater; the sustained discharge that does not result from direct runoff or from water diversions, reservoir releases, piped discharges, or other human activities.

BEST MANAGEMENT PRACTICES (BMP)

Activities, facilities, designs, measures, or procedures used to manage stormwater impacts

from regulated activities, to meet state water quality requirements, to promote infiltration, and to otherwise meet the purposes of this Ordinance. Stormwater BMPs are commonly grouped into one of two broad categories or measures: “structural” or “nonstructural.” In this Ordinance, nonstructural BMPs or measures include certain low impact development practices used to minimize the contact of pollutants with stormwater runoff. These practices aim to limit the total volume of stormwater runoff and manage stormwater at its source by techniques such as protecting natural systems and incorporating existing landscape features. Nonstructural BMPs include, but are not limited to, low impact development practices such as the protection of sensitive and special value features such as wetlands and riparian areas, the preservation of open space while clustering and concentrating development, the reduction of impervious cover, and the disconnection of rooftops from storm sewers. Structural BMPs are those that consist of a physical to capture and treat stormwater runoff. Structural BMPs include, but are not limited to, a wide variety of practices and devices, from large-scale retention ponds and constructed wetlands to small-scale underground treatment systems, infiltration facilities, filter strips, bioretention, wet ponds, permeable paving, grassed swales, riparian buffers, sand filters, detention basins, and manufactured devices. Structural and nonstructural stormwater BMPs are permanent appurtenances to the project site.

BIORETENTION

A stormwater retention area that utilizes woody and herbaceous plants and soils to remove pollutants before infiltration occurs.

BUFFER

See “Riparian Buffer”.

CHANNEL

An open drainage feature through which stormwater flows. Channels include, but shall not be limited to, natural and man-made drainageways, swales, streams, ditches, canals, and pipes flowing partly full.

CHANNEL EROSION

The widening, deepening, or headward cutting of channels and waterways caused by stormwater runoff or bankfull flows.

CISTERN

An underground reservoir or tank for storing rainwater.

CONSERVATION DISTRICT

The Delaware County Conservation District.

CONVEYANCE

A natural or manmade, existing, or proposed Stormwater Management Facility, feature or

channel used for the transportation or transmission of stormwater from one place to another. For the purposes of this Ordinance, Conveyance shall include pipes, drainage ditches, channels, and swales (vegetated and other), gutters, stream channels, and like facilities or features.

CULVERT

A structure with its appurtenant works which carries water under or through an embankment or fill.

DAM

A man-made barrier, together with its appurtenant works, constructed for the purpose of impounding or storing water or another fluid or semifluid. A dam may include a refuse bank, fill, or structure for highway, railroad, or other purposes which impounds or may impound water or another fluid or semifluid.

DEPARTMENT

The Pennsylvania Department of Environmental Protection. Also referred to as "DEP", "PA DEP" or "PADEP".

DESIGNEE

The agent of the Delaware County Planning Department, Delaware County Conservation District, and/or agent of the governing body involved with the administration, review, or enforcement of any provisions of this article by contract or memorandum of understanding.

DESIGN PROFESSIONAL (QUALIFIED)

A Pennsylvania-registered professional engineer, registered landscape architect, or registered professional land surveyor trained to develop stormwater management plans, or any person licensed by the Pennsylvania Department of State or qualified by law to perform the work required by the ordinance.

DESIGN STORM

The magnitude and temporal distribution of precipitation from a storm event measured in probability of occurrence (e.g., a five-year storm) and duration (e.g., 24 hours), used in the design and evaluation of stormwater management systems. Also see Return Period.

DETENTION BASIN

An impoundment designed to collect and retard stormwater runoff by temporarily storing the runoff and releasing it at a predetermined rate. Detention basins are designed to drain completely soon after a rainfall event and become dry until the next rainfall event.

DETENTION VOLUME

The volume of runoff that is captured and released into the waters of the Commonwealth at a controlled rate.

DEVELOPER

A person, or company, or organization who seeks to undertake any regulated earth disturbance activities at a project site in Haverford Township. The Township shall not be considered a Developer under this Ordinance.

DEVELOPMENT, LAND

Any human-induced change to improved or unimproved real estate, whether public or private, including but not limited to land development, construction, installation, or expansion of a building or other structure, land division, street construction, drilling, and site alteration, such as embankments, dredging, grubbing, grading, paving, parking or storage facilities, excavation, filling, stockpiling, or clearing. As used in this article, development encompasses both new development and redevelopment.

DEVELOPMENT SITE (SITE)

See Project Site.

DIAMETER AT BREAST HEIGHT (DBH)

The outside bark diameter at breast height which is defined as 4.5 feet (1.37m) above the forest floor on the uphill side of the tree.

DIFFUSED DRAINAGE DISCHARGE

Drainage discharge that is not confined to a single point location or channel, including sheet flow or shallow concentrated flow.

DISCHARGE

- A. (verb) To release water from a project, site, aquifer, drainage basin, or other point of interest;
- B. (noun) The rate and volume of flow of water such as in a stream, generally expressed in cubic feet per second (see "peak discharge").

DISCHARGE POINT

The point of discharge for a stormwater facility.

DISTURBED AREAS

An unstabilized land area where an earth disturbance activity is occurring or has occurred.

DITCH

A man-made waterway constructed for irrigation or stormwater conveyance purposes.

DOWNSLOPE PROPERTY LINE

That portion of the property line of the lot, tract, or parcels of land being developed, located such that overland or pipe flow from the project site would be directed towards it by gravity.

DRAINAGE CONVEYANCE FACILITY

A stormwater management facility designed to transport stormwater runoff that includes channels, swales, pipes, conduits, culverts, and storm sewers.

DRAINAGE EASEMENT

A right granted by a landowner to a grantee allowing the use of private land for stormwater management purposes.

EARTH DISTURBANCE ACTIVITY

A construction or other human activity which disturbs the surface of the land, including, but not limited to: clearing and grubbing; grading; excavations; embankments; road maintenance; building construction; and the moving, depositing, stockpiling, or storing of soil, rock, or earth materials.

EMERGENCY SPILLWAY

A conveyance area that is used to pass peak discharge greater than the maximum design storm controlled by the stormwater facility.

ENCROACHMENT

A structure or activity that changes, expands or diminishes the course, current, or cross-section of a watercourse, floodway or body of water.

EROSION

The natural process by which the surface of the land is worn away by water, wind or chemical action.

EROSION AND SEDIMENT (E&S) CONTROL PLAN

A plan that is designed to minimize accelerated erosion and sedimentation. Said plan must be submitted to and approved by the appropriate conservation district before construction can begin.

EVAPOTRANSPIRATION (ET)

The combined processes of evaporation from the water or soil surface and transpiration of water by plants.

EXCEPTIONAL VALUE WATERS

Surface waters of high quality which satisfy Pennsylvania Code Title 25 Environmental Protection, Chapter 93, Water Quality Standards, § 93.4b(b) (relating to anti-degradation).

EXISTING CONDITIONS

The dominant land cover during the 5-year period immediately preceding a proposed regulated activity.

FEMA

Federal Emergency Management Agency.

FINANCIAL HARDSHIP

A situation where the greatest possible profit cannot be fully realized from development/redevelopment on a given parcel of land due to added costs or burdens

associated with the design, construction, and/or maintenance of stormwater structures, facilities, buffers and/or setbacks.

FLOOD

A temporary condition of partial or complete inundation of land areas from the overflow of streams, rivers, and other waters of this commonwealth.

FLOODPLAIN

Any land area susceptible to inundation by water from any natural source or delineated by applicable Department of Housing and Urban Development, Federal Emergency Management Agency (FEMA) maps and studies as being a special flood hazard area.

FLOODWAY

The channel of the watercourse and those portions of the adjoining floodplains that are reasonably required to carry and discharge the 100-year flood (also called the base flood or one percent (1%) annual chance flood). Unless otherwise specified, the boundary of the floodway is as indicated on maps and flood insurance studies provided by FEMA. In an area where no FEMA maps or studies have defined the boundary of the 100-year floodway, it is assumed--absent evidence to the contrary--that the floodway extends from the stream to 50 feet from the top of the bank of the stream.

FLUVIAL GEOMORPHOLOGY

The study of landforms associated with river channels and the processes that form them.

FOREST MANAGEMENT/TIMBER OPERATIONS

Planning and activities necessary for the management of forestland. These include conducting a timber inventory, preparation of forest management plans, silvicultural treatment, cutting budgets, logging road design and construction, timber harvesting, site preparation, and reforestation.

FREEBOARD

A vertical distance between the elevation of the design high water and the top of a dam, levee, tank, basin, swale, or diversion berm. The space is required as a safety margin in a pond or basin.

GRADE

A. (noun) A slope, usually of a road, channel or natural ground specified in percent and shown on plans as specified herein.

B. (verb) To finish the surface of a roadbed, the top of an embankment, or the bottom of an excavation.

GRASSED WATERWAY

A natural or man-made waterway, usually broad and shallow, covered with erosion-resistant grasses used to convey surface water.

GREEN INFRASTRUCTURE

Systems and practices that use or mimic natural processes to infiltrate, evapotranspire, or reuse stormwater on the site where it is generated. Also referred to as Green Stormwater Infrastructure (GSI).

GROUNDWATER

Water beneath the earth's surface that supplies wells and springs and is often between saturated soil and rock.

GROUNDWATER RECHARGE

The replenishment of existing natural underground water supplies from rain or overland flow.

HEC-HMS

The U.S. Army Corps Of Engineers, Hydrologic Engineering Center (HEC) – Hydrologic Modeling System (HMS). This model was used to model the Darby-Cobbs and Crum Creek watersheds during the Act 167 plan development and was the basis for the standards and criteria of this article.

HIGH QUALITY WATERS

Surface waters having quality which exceeds levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water by satisfying Pennsylvania Code Title 25 Environmental Protection, Chapter 93, Water Quality Standards, § 93.4b(a).

HIGH TUNNEL

A structure which meets the following:

1. Is used for the production, processing, keeping, storing, sale or shelter of an agricultural commodity as defined in section 2 of the Act of December 19, 1974 (P.L. 973, No. 319), known as the “Pennsylvania Farmland and Forest Land Assessment Act of 1974,” or the storage of agricultural equipment or supplies; and
2. Is constructed with all the following:
 - a. has a metal, wood, or plastic frame;
 - b. when covered, has a plastic, woven textile, or other flexible covering; and
 - c. has a floor made of soil, crushed stone, matting, pavers, or a floating concrete slab.

HOTSPOTS

Areas where land use or activities generate highly contaminated runoff, with concentrations of pollutants in excess of those typically found in stormwater.

HYDROGRAPH

A graph representing the discharge of water versus time for a selected point in the drainage system.

HYDROLOGIC REGIME

The hydrologic cycle or balance that sustains quality and quantity of stormwater, baseflow, storage and groundwater supplies under natural conditions.

HYDROLOGIC SOIL GROUP (HGS)

Infiltration rates of soils vary widely and are affected by subsurface permeability as well as surface intake rates. Soils are classified into four HSGs (A, B, C, and D) according to their minimum infiltration rate, which is obtained for bare soil after prolonged wetting. The NRCS defines the four groups and provides a list of most of the soils in the United States and their group classification. The soils in the area of the development site may be identified from a soil survey report that can be obtained from local NRCS offices or conservation district offices. Soils become less pervious as the HSG varies from A to D (NRCS1,2).

IMPERVIOUS SURFACE (IMPERVIOUS AREA)

Impervious surfaces shall include, but are not limited to, streets, sidewalks, swimming pool surface, pavements, additional indoor living spaces, patios, garages, storage sheds, and similar structures, driveway areas, or roofs, tennis or other paved courts. For the purposes of determining compliance with this Ordinance, compacted soils or stone surfaces used for vehicle parking and movement shall be considered impervious. Uncompacted gravel areas with no vehicular traffic shall be considered pervious per review by the Township Engineer. Surfaces that were designed to allow infiltration (i.e. pavers and areas of porous pavement) are not to be considered impervious surface if designed to function as a BMP per review by the Township Engineer. Additionally, for the purposes of determining compliance with this Ordinance, the total horizontal projection area of all ground-mounted and free-standing solar collectors, including solar photovoltaic cells, panels, and arrays, shall be considered pervious so long as the Township Engineer determines that the area underneath the solar photovoltaic cells, panels, and arrays is maintained as a vegetated pervious surface.

IMPOUNDMENT

A retention or detention basin designed to retain stormwater runoff and release it at a controlled rate.

INFILL

Development that occurs on smaller parcels that remain undeveloped but are within or in very close proximity to urban or densely developed areas. Infill development usually relies on existing infrastructure and does not require an extension of water, sewer, or other public utilities.

INFILTRATION

Movement of surface water into the soil, where it is absorbed by plant roots, evaporated into the atmosphere, or percolated downward to recharge groundwater.

INFILTRATION STRUCTURES

A structure designed to direct runoff into the underground water (e.g., French drains, seepage pits, or seepage trenches).

INFLOW

The flow entering the stormwater management facility and/or BMP.

INLET

The upstream end of any structure through which water may flow.

INTERMITTENT STREAM

A stream that flows only part of the time. Flow generally occurs for several weeks or months in response to seasonal precipitation or groundwater discharge.

INVERT

The lowest surface, the floor or bottom of a culvert, drain, sewer, channel, basin, BMP, or orifice.

KARST

A type of topography or landscape characterized by surface depressions, sinkholes, rock pinnacles/uneven bedrock surface, underground drainage, and caves. Karst is formed on carbonate rocks, such as limestone or dolomite.

LAND DEVELOPMENT (DEVELOPMENT)

Inclusive of any or all of the following meanings:

- i. The improvement of one lot or two or more contiguous lots, tracts, or parcels of land for any purpose involving:
 - a. A group of two or more buildings or
 - b. The division or allocation of land or space between or among two or more existing or prospective occupants by means of, or for the purpose of streets, common areas, leaseholds, condominiums, building groups, or other features;
- ii. Any subdivision of land;
- iii. Development in accordance with Section 503(1.1) of the PA Municipalities Planning Code

LIMITING ZONE

A soil horizon or condition in the soil profile or underlying strata that includes one of the following:

- A. A seasonal high water table, whether perched or regional, determined by direct observation of the water table or indicated by soil mottling.
- B. A rock with open joints, fracture or solution channels, or masses of loose rock fragments, including gravel, with insufficient fine soil to fill the voids between the fragments.
- C. A rock formation, other stratum, or soil condition that is so slowly permeable that it effectively limits downward passage of water.

LOT

A designated parcel, tract, or area of land established by a plat or otherwise as permitted by law and to be used, developed, or built upon as a unit.

LOW IMPACT DEVELOPMENT (LID)

Site design approaches and small-scale stormwater management practices that promote the use of natural systems for infiltration, evapotranspiration, and reuse of rainwater. LID can be applied to new development, urban retrofits, and revitalization projects. LID utilizes design techniques that infiltrate, filter, evaporate, and store runoff close to its source. Rather than rely on costly large-scale conveyance and treatment systems, LID addresses stormwater through a variety of small, cost-effective landscape features located on-site.

MAIN STEM (MAIN CHANNEL)

Any stream segment or other runoff conveyance used as a reach in watershed-specific hydrologic models.

MANAGED RELEASE CONCEPT (MRC)

A post-construction stormwater management (PCSM) strategy that comprises the collection, management, and filtration of captured runoff from the contributing drainage area through a best management practice (BMP) that is preferably vegetated and includes release of a portion of the captured runoff through an underdrain within the BMP. If the MRC BMP is not vegetated, then pretreatment is required to meet water quality requirements. MRC is intended to be used for project areas or subareas where infiltration is considered infeasible to meet regulatory requirements. Refer to the "Managed Release Concept" Version 1.2 (August 25, 2020) guidance document or latest guidance from PA DEP.

MANNING EQUATION (MANNING FORMULA)

A method for calculation of velocity of flow (e.g., feet per second) and flow rate (e.g., cubic feet per second) in open channels based upon channel shape, roughness, depth of flow, and slope. "Open channels" may include closed conduits so long as the flow is not under pressure.

MAXIMUM DESIGN STORM

The maximum (largest) design storm that is controlled by the stormwater facility.

MUNICIPAL ENGINEER or TOWNSHIP ENGINEER

A professional engineer licensed as such in the Commonwealth of Pennsylvania, duly appointed as the Engineer for a municipality, planning agency, or joint planning commission.

MUNICIPALITY or TOWNSHIP

Haverford Township, Delaware County, Pennsylvania.

NATURAL CONDITION

Predevelopment condition.

NATURAL HYDROLOGIC REGIME

See "Hydrologic Regime."

NATURAL RECHARGE AREA

Undisturbed surface area or depression where stormwater collects and a portion of which infiltrates and replenishes the underground and groundwater.

NONPOINT SOURCE POLLUTION

Pollution that enters a water body from diffuse origins in the watershed and does not result from discernible, confined, or discrete conveyances.

NONSTORMWATER DISCHARGES

Water flowing in stormwater collection facilities, such as pipes or swales, which is not the result of a rainfall event or snowmelt.

NONSTRUCTURAL BEST MANAGEMENT PRACTICES (BMPs)

Methods of controlling stormwater runoff quantity and quality, such as innovative site planning, impervious area and grading reduction, protection of natural depression areas, temporary ponding on site, and other techniques.

NPDES

National Pollutant Discharge Elimination System, the federal government's system for issuance of permits under the Clean Water Act, which is delegated to DEP in Pennsylvania.

NRCS

Natural Resource Conservation Service (previously SCS).

OPEN CHANNEL

A conveyance channel that is not enclosed.

OUTFALL

"Point source," as described in 40 CFR § 122.2, at the point where Haverford Township's storm sewer system discharges to surface waters of the commonwealth.

OUTFLOW

The flow exiting the stormwater management facility and/or BMP.

OUTLET

Points of water disposal to a stream, river, lake, tidewater, or artificial drain.

PARENT TRACT

The parcel of land from which a land development or subdivision originates, determined from the date of municipal adoption of this article.

PARKING LOT STORAGE

Involves the use of parking areas as temporary impoundments with controlled release rates during rainstorms.

PEAK DISCHARGE

The maximum rate of stormwater runoff from a specific storm event.

PENN STATE RUNOFF MODEL

The computer-based hydrologic model developed at Pennsylvania State University.

PENNSYLVANIA STORMWATER BEST MANAGEMENT PRACTICES MANUAL

(Document Number 363-0300-002) (December 2006, and as subsequently amended) - The Best Management Practices Manual published by the Pennsylvania Department of Environmental Protection. The manual is to supplement federal and state regulations and the Department of Environmental Protection's Comprehensive Stormwater Management Policy that emphasizes effective site planning as the preferred method of managing runoff while also providing numerous examples of BMPs that can be employed in Pennsylvania to further avoid and minimize flooding and water resource problems.

PERVIOUS AREA

Any area not defined as impervious.

PIPE

A culvert, closed conduit, or similar structure (including appurtenances) that conveys stormwater.

PLANNING COMMISSION

The Planning Commission of Haverford Township.

POINT SOURCE

Any discernible, confined, and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel or conduit from which stormwater is or may be discharged, as defined in state regulations at 25 Pennsylvania Code § 92.1.

POSTCONSTRUCTION

Period after construction during which disturbed areas are stabilized, stormwater controls are in place and functioning, and all proposed improvements in the approved land development plan are completed.

PRECONSTRUCTION

Prior to commencing construction activities.

PREDEVELOPMENT CONDITION

Undeveloped/natural condition.

PRETREATMENT

Techniques employed in stormwater BMPs to provide storage or filtering to trap coarse materials and other pollutants before they enter the system, but not necessarily designed to meet the water quality volume requirements of § 78-37.

PROJECT SITE

The specific area of land where any regulated activities in Haverford Township are planned, conducted or maintained.

QUALIFIED PROFESSIONAL

Any person licensed by the Pennsylvania Department of State or otherwise qualified by law to perform the work required by this Ordinance.

RATIONAL FORMULA

A rainfall-runoff relation used to estimate peak flow.

REACH

Any stream segment or other runoff conveyance used in the watershed-specific hydrologic models.

RECHARGE

The replenishment of groundwater through the infiltration of rainfall, other surface waters, or land application of water or treated wastewater.

RECONSTRUCTION

Demolition and subsequent rebuilding of impervious surface.

RECORD DRAWINGS

Original documents revised to suit the as-built conditions and subsequently provided by the engineer to the client. The engineer reviews the contractor's as-builts against their own records for completeness, then either turns these over to the client or transfers the information to a set of reproducible, in both cases for the client's permanent records.

REDEVELOPMENT

Any development that requires demolition or removal of existing structures or impervious surfaces at a site and replacement with new impervious surfaces. Maintenance activities such as top-layer grinding and repaving are not considered to be redevelopment. Interior remodeling projects and tenant improvements are also not considered to be redevelopment.

REGULATED ACTIVITIES

Any earth disturbance activities or any activities that involve the alteration or development of land in a manner that may affect stormwater runoff. Actions or proposed actions that have an impact on stormwater runoff quality or quantity and that are specified in § 78-17 of this article.

REGULATED EARTH DISTURBANCE ACTIVITY

Activity involving earth disturbance subject to regulation under 25 Pa. Code 92, 25 Pa. Code 102, or the Clean Streams Law. Defined under NPDES Phase II regulations as earth disturbance activity of one acre or more with a point source discharge to surface waters or Haverford Township's storm sewer system or five acres or more regardless of the planned runoff. This includes earth disturbance on any portion of, part, or during any stage of a larger common plan of development.

REGULATED IMPERVIOUS SURFACE

Proposed impervious surface as part of a current proposed activity and all existing impervious surfaces installed after February 15, 2005 as part of a previous activity.

RELEASE RATE

The percentage of existing conditions' peak rate of runoff from a site or subarea to which the proposed conditions' peak rate of runoff must be reduced to protect downstream areas.

REPAVING

Replacement of the impervious surface that does not involve reconstruction of an existing paved (impervious) surface.

REPLACEMENT PAVING

Reconstruction of and full replacement of an existing paved (impervious) surface.

RETENTION BASIN

A structure in which stormwater is stored and not released during the storm event. Retention basins are designed for infiltration purposes and do not have an outlet. The retention basin must infiltrate stored water in four days or less.

RETENTION VOLUME/REMOVED RUNOFF

The volume of runoff that is captured and not released directly into the surface waters of this Commonwealth during or after a storm event.

RETURN PERIOD

The average interval, in years, within which a storm event of a given magnitude can be expected to occur one time. For example, the 25-year return period rainfall would be expected to occur on average once every 25 years; or stated in another way, the probability of a 25-year storm occurring in any one year is 0.04 (i.e., a 4% chance).

RIPARIAN

Pertaining to anything connected with or immediately adjacent to the banks of a stream or other body of water.

RIPARIAN BUFFER

An area of land adjacent to a body of water and managed to maintain the integrity of stream channels and shorelines to 1) reduce the impact of upland sources of pollution by trapping,

filtering, and converting sediments, nutrients, and other chemicals, and 2) supply food, cover and thermal protection to fish and other wildlife.

RISER

A vertical pipe extending from the bottom of a pond that is used to control the discharge rate from the pond for a specified design storm.

ROAD MAINTENANCE

Earth disturbance activities within the existing road cross section, such as grading and repairing existing unpaved road surfaces, cutting road banks, cleaning or clearing drainage ditches, and other similar activities.

ROOF DRAINS

A drainage conduit or pipe that collects water runoff from a roof and leads it away from the structure.

ROOFTOP DETENTION

The temporary ponding and gradual release of stormwater falling directly onto flat roof surfaces using controlled-flow roof drains in building designs.

RUNOFF

Any part of precipitation that flows over the land surface.

SALDO

Subdivision and Land Development Ordinance.

SEDIMENT

Soils or other materials transported by surface water as a product of erosion.

SEDIMENT BASIN

A barrier, dam, or retention or detention basin located and designed in such a way as to retain rock, sand, gravel, silt, or other material transported by water during construction.

SEDIMENT POLLUTION

The placement, discharge, or any other introduction of sediment into the waters of the commonwealth.

SEDIMENTATION

The process by which mineral or organic matter is accumulated or deposited by the movement of water or air.

SEEPAGE PIT/SEEPAGE TRENCH

An area of excavated earth filled with loose stone or similar coarse material into which surface water is directed for infiltration into the underground water.

SEPARATE STORM SEWER SYSTEM

A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains) primarily used for collecting and conveying stormwater runoff.

SHALLOW CONCENTRATED FLOW

Stormwater runoff flowing in shallow, defined ruts prior to entering a defined channel or waterway.

SHEET FLOW

A flow process associated with broad, shallow water movement on sloping ground surfaces that is not channelized or concentrated.

SOIL COVER COMPLEX METHOD

A method of runoff computation developed by NRCS that is based on relating soil type and land use/cover to a runoff parameter called curve number (CN).

SOURCE WATER PROTECTION AREAS (SWPA)

The zone through which contaminants, if present, are likely to migrate and reach a drinking water well or surface water intake.

SPECIAL PROTECTION SUBWATERSHEDS

Watersheds that have been designated by DEP as EV or HQ waters.

SPILLWAY

A conveyance that is used to pass the peak discharge of the maximum design storm that is controlled by the stormwater facility.

STATE WATER QUALITY REQUIREMENTS

The regulatory requirements to protect, maintain, reclaim, and restore water quality under Title 25 of the Pennsylvania Code and the Clean Streams Law.

STORAGE INDICATION METHOD

A reservoir routing procedure based on solution of the continuity equation (inflow minus outflow equals the change in storage) with outflow defined as a function of storage volume and depth.

STORM FREQUENCY

The number of times that a given storm "event" occurs or is exceeded on the average in a stated period of years (see "return period").

STORM SEWER

A system of pipes and/or open channels that conveys intercepted runoff and stormwater from other sources but excludes domestic sewage and industrial wastes.

STORMWATER

Drainage runoff from the surface of the land resulting from precipitation or snow or ice melt.

STORMWATER CONTROL MEASURE

Physical features used to effectively control, minimize, and treat stormwater runoff. Also may be referred to as Stormwater Management Practice (SMP). [See Best Management Practice (BMP)].

STORMWATER MANAGEMENT DISTRICT

Those subareas of a watershed in which some type of detention is required to meet the plan requirements and the goals of Act 167.

STORMWATER MANAGEMENT FACILITY

Any structure, natural or man-made, that, due to its condition, design, or construction, conveys, stores, or otherwise affects stormwater runoff quality, rate, or quantity, including Best Management Practices and Stormwater Control Measures. Typical stormwater management facilities include, but are not limited to: detention and retention basins, open channels, storm sewers, pipes, and infiltration facilities.

STORMWATER MANAGEMENT PERMIT (SWM PERMIT)

A permit issued by Haverford Township after the SWM Site plan has been approved.

STORMWATER MANAGEMENT PLAN

The watershed plan, known as the "Darby and Cobbs Creeks Watershed Act 167 Stormwater Management Plan," for managing those land use activities that will influence stormwater runoff quality and quantity and that would impact the Darby and Cobbs Creeks watershed adopted by Delaware County, Chester County, Montgomery County and Philadelphia County as required by the Act of October 4, 1978, P.L. 864 (Act 167).

STORMWATER MANAGEMENT SITE PLAN (SWM SITE PLAN)

The plan prepared by the developer or his representative indicating how stormwater runoff will be managed at the development site in accordance with this Ordinance. Stormwater Management Site Plan will be designated as SWM Site Plan throughout this Ordinance.

STREAM

A natural watercourse.

STREAM BUFFER

The land area adjacent to each side of a stream essential to maintaining water quality (see "buffer").

STREAM ENCLOSURE

A bridge, culvert, or other structure in excess of 100 feet in length upstream to downstream which encloses a regulated water of the commonwealth.

SUBAREA (SUBWATERSHED)

The smallest drainage unit of a watershed for which stormwater management criteria have

been established in the stormwater management plan.

SUBDIVISION

As defined in The Pennsylvania Municipalities Planning Code, Act of July 31, 1968, P.L. 805, No. 247; The division or redivision of a lot, tract, or parcel of land by any means into two or more lots, tracts, parcels, or other divisions of land including changes in existing lot lines for the purpose, whether immediate or future, of lease, partition by the court for distribution to heirs or devisees, transfer of ownership, or building or lot development; provided, however, that the subdivision by lease of land for agricultural purposes into parcels of more than 10 acres not involving any new street or easement of access or any residential dwelling shall be exempted.

SURFACE WATERS OF THE COMMONWEALTH

Any and all rivers, streams, creeks, rivulets, ditches, watercourses, storm sewers, lakes, dammed water, wetlands, ponds, springs, and all other bodies or channels of conveyance of surface waters, or parts thereof, whether natural or artificial, within or on the boundaries of the commonwealth.

SWALE

A low-lying stretch of land that gathers or carries surface water runoff.

TIMBER OPERATIONS

See "Forest Management."

TIME-OF-CONCENTRATION (T_c)

The time required for surface runoff to travel from the hydraulically most distant point of the watershed to a point of interest within the watershed. This time is the combined total of overland flow time and flow time in pipes or channels, if any.

TOP-OF-BANK

Highest point of elevation in a stream channel cross section at which a rising water level just begins to flow out of the channel and over the floodplain.

UNDEVELOPED CONDITION

Natural condition (see also "Predevelopment Condition").

USDA

United States Department of Agriculture

VERNAL POND

Seasonal depressional wetlands that are covered by shallow water for variable periods from winter to spring but may be completely dry for most of the summer and fall.

WATERCOURSE

A channel or conveyance of surface water having a defined bed and banks, whether natural or artificial, with perennial or intermittent flow.

WATERS OF THIS COMMONWEALTH

Any and all rivers, streams, creeks, rivulets, impoundments, ditches, watercourses, storm sewers, lakes, dammed water, wetlands, ponds, springs, and all other bodies or channels of conveyance of surface and underground water, or parts thereof, whether natural or artificial, within or on the boundaries of this Commonwealth.

WATERSHED

Region or area drained by a river, watercourse, or other surface water of this Commonwealth.

WELLHEAD

- A. A structure built over a well;
- B. The source of water for a well.

WELLHEAD PROTECTION AREA

The surface and subsurface area surrounding a water supply well, well field, or spring supplying a public water system through which contaminants are reasonably likely to move toward and reach the water source.

WET BASIN

Pond for urban runoff management that is designed to detain urban runoff and always contains water.

WETLAND

Areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions, including swamps, marshes, bogs, and similar areas.

WOODS

A natural ground cover with more than one viable tree of a DBH of six inches or greater per 1,500 square feet which existed within three years of application; a cover condition for which SCS curve numbers have been assigned or to which equivalent rational method runoff coefficients have been assigned.

§ 78-25. General Requirements.

For any of the activities regulated by this article, the preliminary or final approval of subdivision and/or land development plans, the issuance of any building or occupancy permit, or the commencement of any earth disturbance activity may not proceed until the property owner or applicant or their agent has received written approval of a SWM site plan from Haverford Township and an adequate erosion and sediment control plan review by the Conservation District.

§ 78-26. SWM site plan contents.

The SWM site plan shall consist of a general description of the project including sequencing items described in § 78-35 [Nonstructural project design (sequencing to minimize stormwater impacts)], calculations, maps, and plans. A note on the maps shall refer to the associated computations and erosion and sediment control plan by title and date. The cover sheet of the computations and erosion and sediment control plan shall refer to the associated maps by title and date. All SWM site plan materials shall be submitted to Haverford Township in a format that is clear, concise, legible, neat, and well organized; otherwise, the SWM Site plan shall not be accepted for review and shall be returned to the applicant. The following items shall be included in the SWM site plan:

A. General.

1. General description of the project including those areas described in § 78-35 [Nonstructural project design (sequencing to minimize stormwater impacts)].
2. General description of proposed permanent stormwater management techniques, including construction specifications of the materials to be used for stormwater management facilities.
3. Complete hydrologic, hydraulic, and structural computations for all stormwater management facilities.
4. An erosion and sediment control plan, including all reviews and letters of adequacy from the Conservation District.
5. A general description of proposed nonpoint source pollution controls.
6. A justification must be included in the SWM Site Plan if BMPs other than green infrastructure methods and LID practices are proposed to achieve the volume, rate, and water quality controls under this Ordinance.
7. The SWM Site Plan Application and completed fee schedule form and associated fee (Appendix C-1).
8. The SWM Site Plan Checklist (Appendix C-2).

B. Maps or Plan Sheets. Map(s) or plan sheets of the project area shall be submitted on twenty-four-inch by thirty-six-inch sheets and/or shall be prepared in a form that meets the requirements for recording at the offices of the Recorder of Deeds of Delaware County. If the SALDO has more stringent criteria than this article, then the more stringent criteria shall apply. The contents of the map(s) shall include, but not be limited to:

1. The location of the project relative to highways, municipal boundaries, or other identifiable landmarks.
2. Existing contours at intervals of two feet.
3. Existing streams, lakes, ponds, or other waters of the commonwealth within the project area.
4. Other physical features including flood hazard boundaries, stream buffers, existing drainage courses, areas of natural vegetation to be preserved, and the total extent

of the upstream area draining through the site.

5. The locations of all existing and proposed utilities, sanitary sewers, and water lines within 50 feet of property lines.
6. An overlay showing soil names and boundaries.
7. Limits of earth disturbance, including the type and amount of impervious area that would be added.
8. Proposed structures, roads, paved areas, and buildings.
9. Final contours at intervals of two feet.
10. The name of the development, the name and address of the owner of the property, and the name of the individual or firm preparing the plan.
11. The date of submission.
12. A graphic and written scale of one-inch equals no more than 50 feet; for tracts of 20 acres or more, the scale shall be one inch equals no more than 100 feet.
13. A north arrow.
14. The total tract boundary and size with distances marked to the nearest foot and bearings to the nearest degree.
15. Existing and proposed land use(s).
16. A key map showing all existing man-made features beyond the property boundary that would be affected by the project.
17. Location of all open channels.
18. Overland drainage patterns and swales.
19. A fifteen-foot-wide access easement around all stormwater management facilities that would provide ingress to and egress from a public right-of-way.
20. The location of all erosion and sediment control facilities.
21. A note on the plan indicating the location and responsibility for maintenance of stormwater management facilities that would be located off site. All off-site facilities shall meet the performance standards and design criteria specified in this article
22. A statement, signed by the applicant, acknowledging that any revision to the approved SWM site plan must be approved by Haverford Township, and that a revised erosion and sediment control plan must be submitted to the Conservation District for a determination of adequacy.
23. The following signature block signed and sealed by the qualified Licensed Professional responsible for the preparation of the SWM site plan:

"I, (Licensed Professional), on this date (date of signature), hereby certify that the SWM site plan meets all design standards and criteria of the Haverford Township

Stormwater Management Code."

24. The following signature block for the Municipality:

"On behalf of Haverford Township, (Municipal Official or Designee), on this date (date of signature), has reviewed and hereby certifies to the best of my knowledge that the SWM Site Plan meets all design standards and criteria of the Haverford Township Stormwater Management Ordinance."

C. Supplemental information to be submitted to Haverford Township.

1. A written description of the following information shall be submitted by the applicant and shall include:
 - a. The overall stormwater management concept for the project designed in accordance with § 78-35, Nonstructural project design (sequencing to minimize stormwater impacts).
 - b. Stormwater runoff computations as specified in this article.
 - c. Stormwater management techniques to be applied both during and after development.
 - d. Expected project time schedule.
 - e. Development stages or project phases, if so proposed.
 - f. An operations and maintenance plan in accordance with § 78-48, Responsibilities for operations and maintenance of stormwater controls and BMPs of this article.
2. An erosion and sediment control plan.
3. A description of the effect of the project (in terms of runoff volumes and peak flows) on adjacent properties and on any existing municipal stormwater collection system that may receive runoff from the project site.
4. A declaration of adequacy and highway occupancy permit from the Pennsylvania Department of Transportation (PennDOT) District office when utilization of a PennDOT storm drainage system is proposed.

D. Stormwater management facilities.

1. All stormwater management facilities must be located on a plan and described in detail.
2. The locations of existing and proposed septic tank infiltration areas and wells must be shown.
3. All calculations, assumptions, and criteria used in the design of the stormwater management facilities must be shown.

§ 78-27. SWM Site Plan submission.

Haverford Township shall require receipt of a complete SWM site plan, as specified in this

article.

- A. Proof of application or documentation of required permit(s) or approvals for the programs listed below shall be part of the plan:
 - 1. NPDES permit for stormwater discharges from construction activities.
 - 2. DEP joint permit application.
 - 3. PennDOT highway occupancy permit.
 - 4. Chapter 105 (Dam Safety and Waterway Management).
 - 5. Chapter 106 (Floodplain Management).
 - 6. Any other permit under applicable state or federal regulations.
- B. The plan shall be coordinated with the state and federal permit process and the municipal SALDO review process. The process implementing the provisions in this article is illustrated in Appendixes D-1 and D-2.
- C. For projects that require SALDO approval, the SWM site plan shall be submitted by the applicant as part of the preliminary plan submission where applicable for the regulated activity.
- D. For regulated activities that do not require SALDO approval, see § 78-26, SWM site plan requirements.
- E. Six (6) copies of the SWM site plan shall be submitted and distributed as follows:
 - 1. Two copies to Haverford Township accompanied by the requisite municipal review fee, as specified in this article.
 - 2. Two copies to the County Conservation District.
 - 3. One copy to the municipal Engineer.
 - 4. One copy to the County Planning Commission/Department.
- F. Any submissions to the agencies listed above that are found to be incomplete shall not be accepted for review and shall be returned to the applicant with a notification in writing of the specific manner in which the submission is incomplete.

§ 78-28. Stormwater Management (SWM) Site Plan Review.

- A. The municipal Engineer shall review the SWM site plan for consistency with this article and the respective Act 167 stormwater management plan. Any plan found incomplete shall not be accepted for review and shall be returned to the applicant.
- B. The municipal Engineer shall review the SWM site plan for any subdivision or land development against the municipal SALDO provisions not otherwise superseded by this article.
- C. The Conservation District, in accordance with established criteria and procedures, shall review the SWM site plan for consistency with stormwater management and erosion and sediment pollution control requirements and provide comments to Haverford Township.

The applicant shall respond to the Conservation District comments on the SWM site plan prior to being considered for final approval by the Township.

- D. For activities regulated by this article, the municipal Engineer shall notify the applicant and Haverford Township in writing whether the SWM site plan is consistent with the stormwater management plan ordinance.
 - (1) If the municipal Engineer determines that the SWM site plan is consistent with the stormwater management ordinance, the Municipal Engineer shall forward a letter of consistency to the Township who will then forward a copy to the applicant.
 - (2) If the Municipal Engineer determines that the SWM site plan is inconsistent or noncompliant with the stormwater management ordinance, the municipal Engineer shall forward a letter to the Township with a copy to the applicant citing the reason(s) and specific Code sections for the inconsistency or noncompliance. Inconsistency or noncompliance may be due to inadequate information to make a reasonable judgment as to compliance with the stormwater management plan. Any SWM site plans that are inconsistent or noncompliant may be revised by the applicant and resubmitted when consistent with this article.
- E. For regulated activities specified in § 78-17, Applicability and Regulated Activities of this article that require a building permit, the Municipal Engineer shall notify the Municipal Building Permit Officer in writing whether the SWM site plan is consistent with the stormwater management ordinance. The Municipal Building Permit Officer shall forward a copy of the consistency/inconsistency letter to the applicant. Any SWM site plan deemed inconsistent may be revised by the applicant and resubmitted consistent with this article.
- F. For regulated activities under this article that require an NPDES permit application, the applicant shall forward a copy of the Township Engineer's letter stating that the SWM site plan is consistent with the stormwater management ordinance to the Conservation District. DEP and the Conservation District may consider the Township Engineer's review comments in determining whether to issue a permit.
- G. Haverford Township shall not grant preliminary or final approval to any subdivision or land development for regulated activities specified in § 78-17, Applicability and Regulated Activities, of this article if the SWM site plan has been found by the Township Engineer to be inconsistent with the stormwater management ordinance. All required permits from DEP must be obtained prior to approval of any subdivision or land development.
- H. No building permits for any regulated activity specified in § 78-17, Applicability and Regulated Activities of this article shall be approved by Haverford Township if the SWM site plan has been found to be inconsistent with the stormwater management plan, as determined by the Township Engineer and Conservation District, or without considering the comments of the Township Engineer and Conservation District. All required permits from DEP must be obtained prior to issuance of a building permit.
- I. The Applicant shall be responsible for completing record drawings of all stormwater management facilities included in the approved SWM site plan. The record drawings and an explanation of any discrepancies with the design plans shall be submitted to

the Township Engineer for final approval. In no case shall Haverford Township approve the record drawings until Haverford Township receives a copy of an approved declaration of adequacy and/or highway occupancy permit from the PennDOT District office, NPDES permit, and any other applicable permits or approvals from DEP or the Conservation District. The above permits and approvals must be based on the record drawings.

- J. Haverford Township's approval of a SWM site plan shall be valid for a period not to exceed five years commencing on the date that Haverford Township signs the approved SWM site plan. If stormwater management facilities included in the approved SWM site plan have not been constructed, or if constructed, record drawings of these facilities have not been approved within this five-year time period, then Haverford Township may consider the SWM site plan inconsistent or noncompliant and may revoke any and all permits. SWM site plans that are determined to be inconsistent or noncompliant by Haverford Township shall be resubmitted in accordance with § 78-30, Resubmission of Inconsistent or Noncompliant SWM Site Plans, of this article.

§ 78-29. Revision of SWM Site Plans.

- A. A revision to a submitted SWM site plan under review by Haverford Township for a development site that involves the following shall require a resubmission to Haverford Township of a revised SWM site plan consistent with § 78-26 of this article and be subject to review as specified in § 78-28 of this article:
 - (1) Change in stormwater management facilities or techniques;
 - (2) Relocation or redesign of stormwater management facilities; or
 - (3) Is necessary because soil or other conditions are not as stated on the SWM site plan as determined by the Municipal Engineer.
- B. A revision to an already approved or inconsistent or noncompliant SWM site plan shall be submitted to Haverford Township, accompanied by the applicable municipal review and inspection fee. A revision to a SWM site plan for which a formal action has not been taken by Haverford Township shall be submitted to Haverford Township accompanied by the applicable municipal review and inspection fee.

§ 78-30. Resubmission of inconsistent or noncompliant SWM site plans.

An inconsistent or noncompliant SWM site plan may be resubmitted with the revisions addressing the Township Engineer's concerns documented in writing. It must be addressed to Haverford Township in accordance with § 78-27 contents of this article, distributed accordingly, and be subject to review as specified in § 78-28 of this article. The applicable Township review and inspection fee must accompany a resubmission of an inconsistent or noncompliant SWM site plan.

§78-31. General Requirements for stormwater management.

- A. Applicants proposing regulated activities in Haverford Township which do not fall under the exemption criteria shown in §78-18 shall submit a stormwater management site plan consistent with this ordinance and the applicable watershed stormwater management plan to Haverford Township for review. The stormwater management

criteria of this Ordinance shall apply to the total proposed development even if development is to take place in stages.

- B. The applicant is required to design the site to minimize surface discharge of stormwater and the creation of impervious surfaces in order to maintain, as much as possible, the natural hydrologic regime.
- C. The SWM site plan must be designed consistent with the sequencing provisions of §78-35 to ensure maintenance of the natural hydrologic regime, to promote infiltration, and to protect groundwater and surface water quality and quantity. The SWM site plan designer must proceed sequentially in accordance with this Ordinance.
- D. Stormwater drainage systems shall be designed in order to preserve natural flow conditions to the maximum extent practicable.
- E. Alteration of existing drainage discharge onto adjacent property shall only be proposed in accordance with PADEP guidance document “Chapter 102 Off-Site Discharges of Stormwater to Non-Surface Waters – Frequently Asked Questions (FAQ)” dated January 2, 2019, or latest guidance document from PADEP. Such discharge shall be subject to any applicable discharge criteria specified in this Ordinance and still must meet the requirements of Act 167.
- F. Areas of existing diffused drainage discharge, whether proposed to be concentrated or maintained as diffused drainage areas, shall be subject to any applicable discharge criteria in the general direction of existing discharge, except as otherwise provided by this Ordinance. If diffused drainage discharge is proposed to be concentrated and discharged onto adjacent property, the Applicant must document that adequate downstream conveyance facilities exist to safely transport the concentrated discharge or otherwise prove that no erosion, sedimentation, flooding, or other impacts will result from the concentrated discharge.
- G. Where a development site is traversed by a stream, drainage easements shall be provided on either side of, and conform to the line of such streams. The terms of the easement shall conform to the stream buffer requirements contained in §78-42.
- H. Any stormwater management facilities regulated by this article that would be located in or adjacent to waters of the commonwealth or delineated wetlands shall be subject to approval by DEP through the joint permit application or the environmental assessment approval process or, where deemed appropriate, by the DEP general permit process. When there is a question as to whether wetlands may be involved, it is the responsibility of the applicant or his agent to show that the land in question cannot be classified as wetlands; otherwise, approval to work in the area must be obtained from DEP
- I. Any proposed stormwater management facilities regulated by this article that would be located on state highway rights-of-way shall be subject to approval by PennDOT.
- J. Minimization of impervious surfaces and infiltration of runoff through seepage beds, infiltration trenches, etc., is encouraged where soil conditions permit in order to reduce the size or eliminate the need for detention facilities or other structural BMPs.
- K. Rooftop runoff may go directly to an infiltration BMP or be evapotranspired.

- L. All regulated activities within the Municipality shall be designed, implemented, operated, and maintained to meet the purposes of this Ordinance, through these two elements:
 - 1. Erosion and sediment control during earth disturbance activities (e.g., during construction), and
 - 2. Water quality protection measures after completion of earth disturbance activities (i.e., after construction), including operations and maintenance.
- M. No regulated activity within the Municipality shall commence until the Municipality issues approval of a SWM plan, which demonstrates compliance with the requirements of this ordinance.
- N. The BMPs shall be designed, implemented, and maintained to meet state water quality requirements and any other more stringent requirements as determined by the Township. Applicants shall utilize the Pennsylvania Stormwater Best Management Practices Manual (PA BMP Manual), as amended, or other sources acceptable to the Township Engineer, for testing and design standards for BMPs, and where there is a conflict with the provisions of this Ordinance, the most restrictive applies.
- O. Post-construction water quality protection shall be addressed as required by §78-37.
- P. Operations and maintenance of permanent stormwater BMPs shall be addressed as required by this article.
- Q. All BMPs used to meet the requirements of this Ordinance shall conform to the state water quality requirements and any more stringent requirements as set forth by Haverford Township.
- R. Techniques described in Appendix E (Low Impact Development) of this Ordinance shall be considered because they reduce the costs of complying with the requirements of this Ordinance and the state water quality requirements.
- S. In selecting the appropriate BMPs or combinations thereof, the Applicant shall consider the following:
 - 1. Total contributing drainage area.
 - 2. Permeability and infiltration rate of the site's soils.
 - 3. Slope and depth to bedrock.
 - 4. Seasonal high water table.
 - 5. Proximity to building foundations and wellheads.
 - 6. Erodibility of soils.
 - 7. Land availability and configuration of the topography.
 - 8. Peak discharge and required volume control.
 - 9. Stream bank erosion.

10. Efficiency of the BMPs to mitigate potential water quality problems.

11. The volume of runoff that will be effectively treated.

12. The nature of the pollutant being removed.

13. Maintenance requirements.

14. Creation/protection of aquatic and wildlife habitat.

15. Recreational value.

16. Enhancement of aesthetic and property values.

R. The design of all stormwater management facilities shall incorporate sound engineering principles and practices in a manner that does not aggravate existing stormwater problems. The Township reserves the right to disapprove any design that would result in construction in or continuation of a stormwater problem area.

S. The applicant may meet the stormwater management criteria through off-site stormwater management measures as long as the proposed measures are in the same subwatershed as shown in Ordinance Appendix A.

U. The following standards for protection of adjacent and downgradient properties from off-site conveyance must be accomplished:

For any location where a new concentrated discharge of stormwater from any frequency rainfall event, up to and including the 100-year storm and the volume of runoff up to and including the 2-year storm onto or through adjacent property(ies) or downgradient property(ies), the following are required:

1. A drainage easement (or other legal agreement/approval) must be obtained for conveyance of discharges onto or through adjacent properties per the PADEP guidance document "Chapter 102 Off-Site Discharges of Stormwater to Non-Surface Wasters - Frequently Asked Questions (FAQ)" dated January 2, 2019, or latest guidance document from PADEP.

2. The conveyance must be designed to avoid erosion, flooding, or other damage to the properties through which it is being conveyed.

3.

§ 78-32. Authorization to Construct and Term of Validity.

Haverford Township's approval of an SWM Site Plan authorizes the regulated activities contained in the SWM Site Plan for a maximum term of validity of 5 years following the date of approval. The Township may specify a term of validity shorter than 5 years in the approval for any specific SWM Site Plan. Terms of validity shall commence on the date the Municipality signs the approval for an SWM Site Plan. If an approved SWM Site Plan is not completed according to Section § 78-33, Permit requirements by other governmental entities; As-Built Plans, Completion Certificate, and Final inspection, within the term of validity, then the Municipality may consider the SWM Site Plan disapproved and may revoke any and all permits. SWM Site Plans that are considered disapproved by the shall be resubmitted in accordance with Section § 78-30 of this Ordinance.

§ 78-33. Permit requirements by other governmental entities.

The following permit requirements may apply to certain regulated earth disturbance activities and must be met prior to commencement of regulated earth disturbance activities, as applicable:

- A. All regulated earth disturbance activities subject to permit requirements by DEP under regulations at 25 Pennsylvania Code Chapter 102.
- B. Work within natural drainageways subject to permit by DEP under 25 Pennsylvania Code Chapter 105.
- C. Any stormwater management facility that would be located in or adjacent to surface waters of the commonwealth, including wetlands, subject to permit by DEP under 25 Pennsylvania Code Chapter 105.
- D. Any stormwater management facility that would be located on a state highway right-of-way or require access from a state highway shall be subject to approval by PennDOT.
- E. Culverts, bridges, storm sewers, or any other facilities which must pass or convey flows from the tributary area and any facility which may constitute a dam, subject to permit by DEP under 25 Pennsylvania Code Chapter 105.

§ 78-34. Erosion and sediment control during regulated earth disturbance activities.

- A. No regulated earth disturbance activities within Haverford Township shall commence until Haverford Township receives an approval from the Conservation District of an erosion and sediment control plan for construction activities.
- B. DEP has regulations that require an erosion and sediment control plan for any earth disturbance activity of 5,000 square feet or more, under 25 Pennsylvania Code § 102.4(b).
- C. In addition, under 25 Pennsylvania Code Chapter 92, a DEP "NPDES construction activities" permit is required for regulated earth disturbance activities. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate DEP regional office or County Conservation District must be provided to Haverford Township.
- D. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate PA DEP regional office or County Conservation District must be provided to the Township. The issuance of an NPDES construction permit (or permit coverage under the statewide General Permit (PAG-2)) satisfies the requirements of §78-33.
- E. A copy of the erosion and sediment control plan and any required permit, as required by DEP regulations, shall be available on the project site at all times.
- F. Additional erosion and sediment control design standards and criteria are recommended to be applied where infiltration BMPs are proposed. They shall include the following:
 - (1) Areas proposed for infiltration BMPs shall be protected from sedimentation and compaction during the construction phase to maintain maximum infiltration

capacity.

- (2) Infiltration BMPs shall not be constructed nor receive runoff until the entire drainage area contributory to the infiltration BMP has achieved final stabilization.

§ 78-35. Nonstructural project design (sequencing to minimize stormwater impacts).

A. The design of all regulated activities shall include the following to minimize stormwater impacts.

- (1) The applicant shall find practicable alternatives to the surface discharge of stormwater, such as those listed in Appendix F, Table F-5, the creation of impervious surfaces, and the degradation of waters of the commonwealth and must maintain as much as possible the natural hydrologic regime of the site.
- (2) The applicant shall apply Low Impact Development (LID) methods such as those listed in Appendix E, provided that use of this method does not conflict with other local codes.
- (3) An alternative is practicable if it is available and capable of implementation after taking into consideration existing technology and logistics in light of overall project purposes and other municipal requirements.
- (4) All practicable alternatives to the discharge of stormwater are presumed to have less adverse impact on quantity and quality of waters of the commonwealth unless otherwise demonstrated.

B. The applicant shall demonstrate that the regulated activities were designed in the following sequence. The goal of the sequence is to minimize the increases in stormwater runoff and impacts to water quality resulting from the proposed regulated activity:

- (1) Prepare an existing resource and site analysis map (ERSAM) showing environmentally sensitive areas, including but not limited to, steep slopes, ponds, lakes, streams, wetlands, hydric soils, vernal pools, stream buffers and hydrologic soil groups. Land development, any existing recharge areas, and other requirements outlined in the municipal SALDO shall also be included.
- (2) Establish a stream buffer according to § 78-42.
- (3) Prepare a draft project layout avoiding sensitive areas identified in Subsection B(1).
- (4) Identify site-specific existing conditions drainage areas, discharge points, recharge areas, and hydrologic soil groups A and B (areas conducive to infiltration).
- (5) Evaluate nonstructural stormwater management alternatives:
 - (a) Minimize earth disturbance.
 - (b) Minimize impervious surfaces.
 - (c) Break up large impervious surfaces.
- (6) Satisfy the infiltration volume requirements (§ 78-36) and provide for stormwater pretreatment prior to infiltration.

- (7) Provide for water quality protection in accordance with § 78-37 water quality requirements.
- (8) Provide streambank erosion protection in accordance with § 78-38 streambank erosion requirements.
- (9) Determine into what management district the site falls (Appendix A) and conduct an existing conditions runoff analysis.
- (10) Prepare final project design to maintain existing conditions drainage areas and discharge points, to minimize earth disturbance and impervious surfaces and, to the maximum extent possible, to ensure that the remaining site development has no surface or point discharge.
- (11) Conduct a proposed conditions runoff analysis based on the final design that meets the management district requirements (§ 78-39).
- (12) Manage any remaining runoff prior to discharge through detention, bioretention, direct discharge or other structural control.

§ 78-36. Infiltration Volume Requirements

Providing for infiltration consistent with the natural hydrologic regime is required. Design of the infiltration facilities shall consider infiltration to compensate for the reduction in the recharge that occurs when the ground surface is disturbed or impervious surface is created. It is recommended that roof runoff be directed to infiltration BMPs that may be designed to compensate for the runoff from parking areas. These measures are required to be consistent with § 78-17 and to take advantage of utilizing any existing recharge areas. Infiltration may not be feasible on every site due to site-specific limitations such as soil type. If it cannot be physically accomplished, then the design professional shall be responsible to show that this cannot be physically accomplished.

If it cannot be physically accomplished, then the design professional shall be responsible for demonstrating to the satisfaction of the municipality that this cannot be physically accomplished on the site (e.g., shallow depth to bedrock or limiting zone, open voids, steep slopes, etc. per the PA BMP Manual. A financial hardship as defined in §78-24 is not acceptable to avoid implementing infiltration facilities. If infiltration can be physically accomplished, the volume of runoff to be infiltrated shall be determined from §78-36.A(2) depending on demonstrated site conditions, and shall be the greatest volume that can be physically infiltrated or alternative methods consistent with the PA BMP Manual (as amended) or other PADEP guidance, such as the Managed Release Concept, may be used to manage this volume with approval from the Municipal Engineer. For example:

- Any applicant (developer or redeveloper) shall first attempt to infiltrate the volume required in §78-36.A(2)[a].
- If the §78-36.A(2)[a] requirement cannot be physically accomplished, then the applicant is required to attempt to infiltrate the volume required in §78-36.A(2)[b].
- Finally, if the §78-36.A(2)[b] infiltration volume cannot be physically accomplished, the applicant must, at a minimum, infiltrate the volume required in §78-36.A(2)[c].

A. Infiltration BMPs shall meet the following minimum requirements:

1. Infiltration BMPs intended to receive runoff from developed areas shall be selected based on suitability of soils and site conditions and shall be constructed on soils that have the following characteristics:
 - a. A minimum depth of 24 inches between the bottom of the BMP and the top of the limiting zone unless bioretention is used.
 - b. An infiltration rate sufficient to accept the additional stormwater load and dewater completely as determined by field tests conducted by the applicant's design professional.
 - c. The infiltration facility shall be capable of completely infiltrating the retention (infiltration) volume (Re_v) below grade within four days (96 hours).
 - d. Pretreatment shall be provided prior to infiltration.

2. The size of the infiltration facility shall be based upon the following volume criteria:

- a. Modified Control Guideline One (MCG-1) of the PA BMP Manual – The retention (infiltration) volume (Re_v) to be captured and infiltrated shall be the net 2-year 24-hour volume. The net volume is the difference between the post-development runoff volume and the pre-development runoff volume. The post-development total runoff volume for all storms equal to or less than the 2-year 24-hour duration precipitation shall not be increased. For modeling purposes, existing (pre-development) non-forested pervious areas must be considered meadow in good condition or its equivalent, and twenty (20) percent of existing impervious area, when present, shall be considered meadow in good condition.
- b. Infiltrating the entire Re_v volume in Section §78-36.A(2)[a] (above) may not be feasible on every site due to site-specific limitations such as shallow depth to bedrock or the water table. If it cannot be physically accomplished, then the following criteria from Modified Control Guideline Two (MCG-2) of the PA BMP Manual must be satisfied:

At least the first one-inch (1.0") of runoff from new or replacement impervious surfaces shall be infiltrated.

$$Re_v = 1 \text{ (inch)} * \text{impervious area (square feet)} \div 12 \text{ (inches)} = \text{cubic feet (cf)}$$

An asterisk (*) in equations denotes multiplication.

- c. Only if infiltrating the entire Re_v volume in §78-36.A(2)[b] cannot be physically accomplished, then the following minimum criteria from Modified Control Guideline Two (MCG-2) of the PA BMP Manual must be satisfied:

Wherever possible, infiltration facilities should be designed to accommodate infiltration of the entire water quality volume (WQ_v) in §78-36.A(2)[a]; however, in all cases at least the first one-half inch (0.5") of the WQ_v shall be infiltrated. The minimum infiltration volume (Re_v) required would, therefore, be computed as:

$$\text{Rev} = I * \text{impervious area (square feet)} \div 12 \text{ (inches)} = \text{cubic feet (cf)}$$

An asterisk (*) in equations denotes multiplication.

Where:

I = The maximum equivalent infiltration amount (inches) that the site can physically accept or 0.50 inch, whichever is greater.

The retention volume values derived from the methods in §78-36.A(2)[a], §78-36.A(2)[b], or §78-36.A(2)[c] is the minimum volume the Applicant must control through an infiltration BMP facility. If site conditions preclude capture of runoff from portions of the impervious area, the infiltration volume for the remaining area should be increased an equivalent amount to offset the loss.

Only if the minimum of 0.50 inch of infiltration requirement cannot be physically accomplished, a waiver from §78-36, Infiltration Volume Requirements, is required from the Municipality.

B. Soils. A detailed soils evaluation of the project site shall be required to determine the suitability of infiltration facilities. The evaluation shall be performed by a qualified design professional and at a minimum address soil permeability, depth to bedrock, and subgrade stability. The general process for designing the infiltration BMP shall be:

1. Analyze hydrologic soil groups as well as natural and man-made features within the site to determine general areas of suitability for infiltration practices. In areas where development on fill material is under consideration, conduct geotechnical investigations of subgrade stability; infiltration may not be ruled out without conducting these tests.
2. Provide field tests such as required in the PA BMP Manual.
3. Design the infiltration structure for the required retention (Rev) volume based on field-determined capacity at the level of the proposed infiltration surface.
4. If on-lot infiltration structures are proposed by the applicant's design professional, it must be demonstrated to Haverford Township that the soils are conducive to infiltrate on the lots identified.

C. Stormwater hotspots.

(1) Below is a list of examples of designated hotspots. If a site is designated as a hotspot, it has important implications for how stormwater is managed. First and foremost, untreated stormwater runoff from hotspots shall not be allowed to recharge into groundwater where it may contaminate water supplies. Therefore, the groundwater recharge requirement shall NOT be applied to development sites that fit into the hotspot category (the entire WQv must still be treated). Second, a greater level of stormwater treatment shall be considered at hotspot sites to prevent pollutant wash off after construction. The Environmental Protection Agency's (EPA) NPDES stormwater program requires some industrial sites to prepare and implement a stormwater pollution prevention plan. Stormwater runoff from hotspots shall be pretreated prior to surface or groundwater infiltration to prevent pollutant runoff. Industrial sites referenced in 40 CFR 125 are examples of hotspots.

(a) Examples of hotspots:

Vehicle salvage yards and recycling facilities

Vehicle fueling stations

Vehicle service and maintenance facilities

Vehicle and equipment cleaning facilities

Fleet storage areas (bus, truck, etc.)

Industrial sites based on Standard Industrial Codes

Marinas (service and maintenance)

Outdoor liquid container storage

Outdoor loading/unloading facilities

Public works storage areas

Facilities that generate or store hazardous materials

Commercial container nursery

Contaminated sites/brownfields

Other land uses and activities as designated by an appropriate review authority

(b) The following land uses and activities are not normally considered hotspots:

Residential streets and rural highways

Residential development

Institutional development

Office developments

Nonindustrial rooftops

Pervious areas, except golf courses and nurseries [which may need an integrated pest management (IPM) plan].

(2) While large highways [average daily traffic volume (ADT) greater than 30,000] are not designated as stormwater hotspots, it is important to ensure that highway stormwater management plans adequately protect groundwater.

(3) The Environmental Protection Agency's (EPA) NPDES stormwater program requires some industrial sites to prepare and implement a stormwater pollution prevention plan.

D. Infiltration facilities should, to the greatest extent practicable, be located to avoid introducing contaminants via groundwater, and be in conformance with an approved

source water protection assessment or source water protection plan.

- E. Roadway drainage systems should provide an opportunity to capture accidental spills. Road de-icing material storage facilities shall be designed to avoid salt and chloride runoff from entering waterways and infiltration facilities. The qualified design professional shall evaluate the possibility of groundwater contamination from the proposed infiltration facility and perform a hydrologic justification study if possible.
- F. Extreme caution shall be exercised where infiltration is proposed in SWPAs as defined by the local municipality or water authority.
- G. Infiltration facilities shall be used in conjunction with other innovative or traditional BMPs, stormwater control facilities, and nonstructural stormwater management alternatives.
- H. Extreme caution shall be exercised where salt or chloride (municipal salt storage) would be a pollutant since soils do little to filter this pollutant, and it may contaminate the groundwater. The qualified design professional shall evaluate the possibility of groundwater contamination from the proposed infiltration facility and perform a hydrogeologic justification study if necessary.
- I. The antidegradation analysis found in Chapter 93 shall be applied in HQ or EV streams.
- J. An impermeable liner will be required in detention basins where the possibility of groundwater contamination exists. A detailed hydrogeologic investigation may be required by Haverford Township.
- K. Haverford Township shall require the applicant to provide safeguards against groundwater contamination for land uses that may cause groundwater contamination should there be a mishap or spill.

§ 78-37. Water quality requirements.

The applicant shall comply with the following water quality requirements of this article.

- A. No regulated earth disturbance activities within Haverford Township shall commence until approval by Haverford Township of a plan which demonstrates compliance with postconstruction state water quality requirements.
- B. The BMPs shall be designed, implemented, and maintained to meet state water quality requirements and any other more stringent requirements as determined by Haverford Township.
- C. To control post-construction stormwater impacts from regulated activities and conform to state water quality requirements, BMPs which replicate pre-development stormwater infiltration and runoff conditions must be provided in the site design such that post-construction stormwater discharges do not degrade the physical, chemical, or biological characteristics of the receiving waters. The green infrastructure and Low Impact Development (LID) practices provided in the PA BMP Manual, as well as the guidance on green infrastructure and LID provided in Appendix E shall be utilized for all regulated activities wherever possible. This may be achieved by the following:

- (1) Infiltration: replication of preconstruction stormwater infiltration conditions;
- (2) Treatment: use of water quality treatment BMPs to ensure filtering out of the chemical and physical pollutants from the stormwater runoff; and
- (3) Streambank and streambed protection: management of volume and rate of postconstruction stormwater discharges to prevent physical degradation of receiving waters (e.g., from scouring).

D. Developed areas shall provide adequate storage and treatment facilities necessary to capture and treat stormwater runoff. The infiltration volume computed under § 78-36 may be a component of the water quality volume if the applicant chooses to manage both components in a single facility. If the infiltration volume is less than the water quality volume, the remaining water quality volume may be captured and treated by methods other than infiltration BMPs. The required water quality volume (WQv) is the storage capacity needed to capture and treat a portion of stormwater runoff from the developed areas of the site.

- (1) To achieve this goal, the following criterion is established:

The Post-construction total runoff volume shall not exceed the Predevelopment total runoff volume for all storms equal to or less than the two-year, 24-hour duration precipitation (design storm). If the Township Engineer concurs that this criterion cannot be met, a minimum of one half (0.5)-inches of runoff from all Regulated Impervious Surfaces shall be managed. For modeling purposes, existing (pre-development) non-forested pervious areas must be considered meadow in good condition or its equivalent, and twenty (20) percent of existing impervious area, when present, shall be considered meadow in good condition.

This volume requirement can be managed by the permanent volume of a wet basin or the detained volume from other BMPs. Where appropriate, wet basins shall be utilized for water quality control and shall follow the guidelines of the PA BMP Manual referenced in Appendix G.

Release of water can begin at the the start of the storm (i.e. the invert of the water quality orifice is at the inver of the facility). The design of the facility shall provide for protection from clogging and unwanted sedimentation.

E. For areas within defined special protection subwatersheds that include EV and HQ waters, the temperature and quality of water and streams shall be maintained through the use of temperature-sensitive BMPs and stormwater conveyance systems.

F. To accomplish the above, the applicant shall submit original and innovative designs to the Township engineer for review and approval. Such designs may achieve the water quality objectives through a combination of different BMPs.

G. Evapotranspiration may be quantified and credited towards meeting volume requirements according to the PADEP Post Construction Stormwater Management (PCSM) Spreadsheet and Instructions (December 2020) or the most recent guidance from PADEP.

H. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate DEP regional office must be provided to Haverford Township.

§ 78-38. Streambank erosion requirements.

A. In addition to the control of water quality volume (in order to minimize the impact of stormwater runoff on downstream streambank erosion), the primary requirement is to design a BMP to detain the proposed conditions two-year, twenty-four-hour design storm to the existing conditions one-year flow using the SCS Type II distribution. Additionally, provisions shall be made (such as adding a small orifice at the bottom of the outlet structure) so that the proposed conditions one-year storm takes a minimum of 24 hours to drain from the facility from a point where the maximum volume of water from the one-year storm is captured (i.e., the maximum water surface elevation is achieved in the facility). Release of water can begin at the start of the storm (i.e., the invert of the water quality orifice is at the invert of the facility).

B. The minimum orifice size in the outlet structure to the BMP shall be three inches in diameter where possible, and a trash rack shall be installed to prevent clogging. On sites with small drainage areas contributing to this BMP that do not provide enough runoff volume to allow a twenty-four-hour attenuation with the three-inch orifice, the calculations shall be submitted showing this condition. Orifice sizes less than three inches can be utilized, provided that the design will prevent clogging of the intake.

C. In "Conditional Direct Discharge Districts" (District C) only (see § 78-39), the objective is not to attenuate the storms greater than the two-year recurrence interval. This can be accomplished by configuring the outlet structure not to control the larger storms or by a bypass channel that diverts only the two-year stormwater runoff into the basin or conversely, diverts flows in excess of the two-year storm away from the basin.

§ 78-39. Stormwater peak rate control and management districts.

A. The Darby and Cobbs Creeks watershed has been divided into stormwater management districts as shown on the Management District Map in Appendix A. In addition to the requirements specified in Table 408.1 below, the erosion and sedimentation control (§ 78-34), the nonstructural project design (§ 78-35), the infiltration volume requirements (§ 78-36), the water quality (§ 78-37), and the streambank erosion (§ 78-38) requirements shall be implemented.

(1) Standards for managing runoff from each subarea in the Darby and Cobbs Creeks watershed for the two-, five-, ten-, twenty-five-, fifty-, and one-hundred-year design storms are shown in Table 408.1. Development sites located in each of the management districts must control proposed conditions runoff rates to existing conditions runoff rates for the design storms in accordance with Table 408.1.

TABLE 408.1

C	Conditional Direct Discharge District	

(2) In District C, development sites that can discharge directly to the Darby-Cobbs Creek main channel, major tributaries, or indirectly to the main channel through an existing stormwater drainage system (i.e., storm sewer or tributary) may do so without control of the proposed conditions peak rate of runoff greater than the five-year storm. Sites in District C will still have to comply with the groundwater recharge and infiltration volume requirement criteria, the water quality criteria, and streambank erosion criteria. If the proposed conditions runoff is intended to be conveyed by an existing stormwater drainage system to the main channel, assurance must be provided that such system has adequate capacity to convey the flows greater than the two-year existing conditions peak flow or will be provided with improvements to furnish the required capacity. When adequate capacity in the downstream system does not exist and will not be provided through improvements, the proposed conditions peak rate of runoff must be controlled to the existing conditions peak rate as required in District A provisions (i.e., ten-year proposed conditions flows to ten-year existing conditions flows) for the specified design storms.

B. General. Proposed conditions rates of runoff from any regulated activity shall not exceed the peak release rates of runoff from existing conditions for the design storms specified

on the Stormwater Management District Watershed Map (Appendix A) and this section of the article.

- C. District boundaries. The boundaries of the stormwater management districts are shown on an official map that is available for inspection at the municipal and County Planning offices. A copy of the official map at a reduced scale is included in Appendix A. The exact location of the stormwater management district boundaries as they apply to a given development site shall be determined by mapping the boundaries using the two-foot topographic contours (or most accurate data required) provided as part of the SWM site plan.
- D. Sites located in more than one district. For a proposed development site located within two or more stormwater management district category subareas, the peak discharge rate from any subarea shall meet the management district criteria for which the discharge is located. The calculated peak discharges shall apply regardless of whether the grading plan changes the drainage area by subarea. An exception to the above may be granted if discharges from multiple subareas recombine in proximity to the discharge site. In this case, peak discharge in any direction may follow Management District A criteria, provided that the overall site discharge meets the management district criteria for which the discharge is located.
- E. Off-site areas. Off-site areas that drain through a proposed development site are not subject to release rate criteria when determining allowable peak runoff rates. However, on-site drainage facilities shall be designed to safely convey off-site flows through the development site.
- F. Site areas. Where the site area to be impacted by a proposed development activity differs significantly from the total site area, only the proposed impact area utilizing stormwater management measures shall be subject to the management district criteria. In other words, unimpacted areas bypassing the stormwater management facilities would not be subject to the management district criteria.
- G. "No harm" option. For any proposed development site not located in a Conditional Direct Discharge District, the applicant has the option of using a less-restrictive runoff control (including no detention) if the applicant can prove that "no harm" would be caused by discharging at a higher runoff rate than that specified by the stormwater management plan. The "no harm" option is used when an Applicant can prove that the proposed conditions hydrographs can match existing conditions hydrographs and if it can be proved that the proposed conditions will not cause increases in peaks at all points downstream. Proof of "no harm" must be shown based upon the following downstream impact evaluation which shall include a downstream hydraulic capacity analysis consistent with Subsection H to determine if adequate hydraulic capacity exists. The applicant shall submit to Haverford Township this evaluation of the impacts due to increased downstream stormwater flows in the watershed.
 - (1) The hydrologic regime of the site must be maintained.
 - (2) The downstream impact evaluation shall include hydrologic and hydraulic calculations necessary to determine the impact of hydrograph timing modifications due to the proposed development upon a dam, highway, structure, natural point of restricted streamflow, or any stream channel section established with the

concurrence of the municipality.

- (3) The evaluation shall continue downstream until the increase in flow diminishes due to additional flow from tributaries and/or stream attenuation.
- (4) The peak flow values to be used for downstream areas for the design return period storms (two-, five-, ten-, fifty-, and one-hundred-year) shall be the values from the calibrated model for the respective watershed. These flow values can be obtained from the original Act 167 watershed stormwater management plans.
- (5) Applicant-proposed runoff controls which would generate increased peak flow rates at storm drainage problem areas would, by definition, be precluded from successful attempts to prove "no-harm," except in conjunction with proposed capacity improvements for the problem areas consistent with Subsection H.
- (6) Financial distress shall not constitute grounds for the municipality to approve the use of the "no-harm" option.
- (7) Capacity improvements to conveyance facilities or obstructions may be provided as necessary to implement the "no harm" option as long as it can be demonstrated through the downstream hydraulic capacity analysis that the improvements would not create any harm downstream.
- (8) Any "no harm" justifications shall be submitted by the applicant as part of the drainage plan submission per this article.

H. Downstream hydraulic capacity analysis. Any downstream hydraulic capacity analysis conducted in accordance with this article shall use the following criteria for determining adequacy for accepting increased peak flow rates:

- (1) Natural or man-made channels or swales must be able to convey the increased runoff associated with a two-year return period event within their banks at velocities consistent with protection of the channels from erosion. Acceptable velocities shall be based upon criteria included in the DEP Erosion and Sediment Pollution Control Program Manual.
- (2) Natural or man-made channels or swales must be able to convey increased twenty-five-year return period runoff without creating any hazard to persons or property.
- (3) Culverts, bridges, storm sewers, or any other facilities which need to pass or convey flows from the tributary area must be designed in accordance with DEP Chapter 105 regulations (if applicable) and, at minimum, pass the increased twenty-five-year return period runoff.
- (4) Water quality requirements as defined in §78-37.
- (5) Post-construction peak rates shall not exceed the existing peak rates for the respective sub-area.

I. Alternate criteria for redevelopment sites. For redevelopment sites, one of the following minimum design parameters shall be accomplished, whichever is most appropriate for the given site conditions as determined by Haverford Township;

- (1) Meet the full requirements specified by Table 408.1 and Stormwater peak rate control and management districts, § 78-39 ; or
- (2) Reduce the total pre-development impervious surface on the site by at least 20% based upon a comparison of existing impervious surface to regulated impervious surface. In this case, calculations must be provided that show the peak rate has not increased.

§ 78-40. Calculation Methodology.

A. Stormwater runoff from all development sites with a drainage area of greater than five (5) acres shall be calculated using a generally accepted calculation technique that is based on the NRCS soil cover complex method. Table 409.1 summarizes acceptable computation methods, and the method selected by the design professional shall be based on the individual limitations and suitability of each method for a particular site.

Credits providing an automatic reduction in impervious area and a corresponding reduction in stormwater impacts for the reduction of design volume, peak rate, and channel protection are available for protecting existing trees as well as revegetating and reforestation are outlined in Appendix E. No more than 25% of the Volume Reduction may be met through Nonstructural BMP credits.

Haverford Township may allow the use of the Rational Method to estimate peak discharges from drainage areas that contain less than five (5) acres. The use of the Rational Method to estimate peak discharges for drainage areas greater than five (5) acres shall be permitted only upon approval of the Township engineer.

TABLE 409.1

ACCEPTABLE COMPUTATION METHODOLOGIES
FOR STORMWATER MANAGEMENT PLANS

Method	Developed By	Applicability
TR-20 (or commercial computer package based on TR-20)	USDA NRCS	Applicable where use of full hydrology computer model is desirable or necessary.
TR-55 (or commercial computer package based on TR-55)	USDA NRCS	Applicable for land development plans where limitations described in TR-55.
HEC-1/HEC-HMS	US Army Corps of Engineers	Applicable where use of a full hydrologic computer is desirable or necessary.
PSRM	Penn State University	Applicable where use of a hydrologic model is desirable or necessary; simpler than TR-20 or HEC-1.

TABLE 409.1

Other methods	Varies	Other computation methodologies approved by the municipality and/or municipal Engineer.
HEC RAS	US Army Corp of Engineers	"No harm" option

- B. All calculations consistent with this article using the soil cover complex method shall use the appropriate design rainfall depths for the various return period storms. Rainfall depths shall be according to NOAA Atlas 14 values consistent with a partial duration series. When stormwater calculations are performed for routing procedures or water quality functions, the duration of rainfall shall be twenty-four (24) hours.
- C. The following criteria shall be used for runoff calculations:
- (1) For development sites not considered redevelopment, the ground cover used in determining the existing conditions flow rates shall be as follows:
 - (a) Wooded sites shall use a ground cover of "woods in good condition." Portions of a site having more than one viable tree of a DBH of six inches or greater per 1,500 square feet shall be considered "wooded" where such trees existed within three years of application.
 - (b) The undeveloped portion of the site including agriculture, bare earth and fallow ground, shall be considered as "meadow in good condition," unless the natural ground cover generates a lower curve (CN) number or Rational "c" value (i.e., woods) as listed in Tables F-2 or F-3 in Appendix F of this article.
 - (2) For development and redevelopment sites, the ground cover used in determining the existing conditions flow rates for the developed portion of the site shall be based upon actual land cover conditions.
- D. All calculations using the Rational Method shall use rainfall intensities consistent with appropriate times of concentration (duration) and storm events with rainfall intensities obtained from NOAA Atlas 14 partial duration series estimates, or the latest version of the PennDOT Drainage Manual (PDM Publication 584). Times of concentration shall be calculated based on the methodology recommended in the respective model used. Times of concentration for channel and pipe flow shall be computed using a minimum of five (5) minutes.
- E. Runoff curve numbers (CN) for both existing and proposed conditions to be used in the soil cover complex method shall be obtained from Table F-2 in Appendix F of this article.
- F. Runoff coefficients (c) for both existing and proposed conditions for use in the rational method shall be obtained from Table F-3 in Appendix F of this article.
- G. Hydraulic computations to determine the capacity of pipes, culverts, and storm sewers shall be consistent with methods and computations contained in the Federal Highway

Administration Hydraulic Design Series Number 5 (Publication No. FWHA-NHI-01-020 HDS No. 5). Hydraulic computations to determine the capacity of open channels shall be consistent with methods and computations contained in the Federal Highway Administration Hydraulic Engineering Circular Number 15 (Publication No. FHWA-BHI-05-114 HEC 15). Values for Manning's roughness coefficient (n) shall be consistent with Table F-4 in Appendix F.

- H. Outlet structures for stormwater management facilities shall be designed to meet the performance standards of this article using any generally accepted hydraulic analysis technique or method.
- I. The design of any stormwater detention facilities intended to meet the performance standards of this article shall be verified by routing the design storm hydrograph through these facilities using the storage-indication method. The design storm hydrograph shall be computed using a calculation method that produces a full hydrograph. Haverford Township may approve the use of any generally accepted full hydrograph approximation technique that shall use a total runoff volume that is consistent with the volume from a method that produces a full hydrograph.

§ 78-41. Other requirements.

- A. Any stormwater facility located on state highway rights-of-way shall be subject to approval by PennDOT.
- B. All wet basin designs shall incorporate biologic controls consistent with the West Nile Guidance found in Appendix H, PADEP document 363-0300-001 "Design Criteria – Wetlands Replacement/Monitoring," or contact the Pennsylvania State Cooperative Wetland Center (www.wetlands.psu.edu/) or the Penn State Cooperative Extension Office (www.extension.psu.edu/extmap.html).
- C. Any stormwater management facility (i.e., detention basin) required or regulated by this article designed to store runoff and requiring a berm or earthen embankment shall be designed to provide an emergency spillway to handle flow up to and including the one-hundred-year proposed conditions. The height of embankment must provide a minimum 1.0 foot of freeboard above the maximum pool elevation computed when the facility functions for the one-hundred-year proposed conditions inflow. Should any stormwater management facility require a dam safety permit under DEP Chapter 105, the facility shall be designed in accordance with Chapter 105 and meet the regulations of Chapter 105 concerning dam safety. Chapter 105 may be required to pass storms larger than the one-hundred-year event.
- D. Any facilities that constitute water obstructions (e.g., culverts, bridges, outfalls, or stream enclosures) and any work involving wetlands governed by DEP Chapter 105 regulations (as amended or replaced from time to time by DEP) shall be designed in accordance with Chapter 105 and will require a permit from DEP.
- E. Any other drainage conveyance facility that does not fall under Chapter 105 regulations must be able to convey, without damage to the drainage structure or roadway, runoff from the twenty-five-year design storm with a minimum 1.0 foot of freeboard measured below the lowest point along the top of the roadway. Any facility that constitutes a dam as defined in DEP Chapter 105 regulations may require a permit under dam safety

regulations. Any facility located within a PennDOT right-of-way must meet PennDOT minimum design standards and permit submission requirements. The larger events (50 year and 100 year) must also be safely conveyed in the direction of natural flow without creating additional damage to any drainage structures, nearby structures, or roadways.

- F. Any drainage conveyance facility and/or channel not governed by Chapter 105 regulations must be able to convey, without damage to the drainage structure or roadway, runoff from the twenty-five-year design storm. Conveyance facilities to or exiting from stormwater management facilities (i.e., detention basins) shall be designed to convey the design flow to or from that structure. Roadway crossings located within designated floodplain areas must be able to convey runoff from a one-hundred-year design storm. Any facility located within a PennDOT right-of-way must meet PennDOT minimum design standards and permit submission requirements.
- G. Conveyance facilities transporting flow to or exiting from stormwater management facilities (i.e. detention basins) shall be designed to convey the 100-year frequency storm.
- H. Roadway crossings or structures located within designated floodplain areas must be able to convey runoff from a 100-year design storm consistent with FEMA Floodplain Management requirements.
- I. Adequate erosion protection shall be provided along all open channels and at all points of discharge.
- J. The design of all stormwater management facilities shall incorporate sound engineering principles and practices. Haverford Township reserves the right to disapprove any design that would result in construction in or continuation of a stormwater problem area.

§78-42. Riparian Buffers

- A. Except as required by Chapter 102, if a perennial or intermittent stream passes through, or a waterbody (i.e., lake, pond, wetland) is present on the site, the Applicant shall create a Riparian Buffer extending a minimum of 50 feet, to either side of the top-of-bank of the channel, lake, or wetland
- B. The Riparian Buffer shall be planted with native vegetation and maintained in a vegetated state (Refer to Appendix B, Pennsylvania Native Plant List, contained in the PA BMP Manual or latest guidance document from PADEP).
 - 1. The following provisions also apply to Riparian Buffers on lots in existence at the time of adoption of this Ordinance:
 - a. If the applicable rear or side yard setback is less than 50 feet, the buffer width may be reduced to twenty-five (25) percent of the setback or twenty-five (25) feet, whichever is greater.
 - b. If a stream traverses a site in a manner that significantly reduces the use of the site, the buffer may be either:
 - i. Reduced to twenty-five (25) feet on either side, with municipal approval, or
 - ii. Reduced to ten (10) feet with municipal waiver

2. Permitted uses within the Riparian Buffer include the following, subject to municipal approval and provided that they comply with all federal, state, and local regulations:
 - a. Recreational trails. See Ordinance Appendix J Riparian Buffer Trail Guidelines.
 - b. Utility rights-of-way
 - c. Bridges
 - d. Other uses subject to Township approval.
3. If an existing buffer is legally prescribed (i.e., deed, covenant, easement, etc.) and it exceeds the requirements of this Ordinance, the existing buffer shall be maintained.

§ 78-43. Inspections.

- A. The Municipal Engineer or his municipal designee shall inspect all phases of the installation of the permanent BMPs and/or stormwater management facilities as deemed appropriate by the municipal Engineer.
- B. During any stage of the work, if the municipal Engineer or his municipal designee determines that the permanent BMPs and/or stormwater management facilities are not being installed in accordance with the approved stormwater management plan, the municipality shall revoke any existing permits or other approvals and issue a cease and desist order until a revised SWM site plan is submitted and approved, as specified in this article, and until the deficiencies are corrected.
- C. A final inspection of all BMPs and/or stormwater management facilities shall be conducted by the municipal Engineer or his municipal designee to confirm compliance with the approved SWM site plan prior to the issuance of any occupancy permit.

§78-44. As-Built Plans, Completion Certificate, and Final Inspection

- A. The developer shall be responsible for providing as-built plans of all SWM BMPs included in the approved SWM site plan for activities involving regulated impervious surfaces 1,000 sq. ft. or greater and for earth disturbances 5,000 sq. ft. or greater. The as-built plans and all explanation of any discrepancies with the construction plans shall be submitted to the Municipality within three (3) months of the completion of construction of the SWM BMPs.
- B. As-built plans shall show the location (including latitude and longitude coordinates) and as-built conditions of all SWM BMPs and include the following information: impervious surfaces included in the approved SWM site plan; topographic contours; and existing, proposed, and built impervious surfaces shown in the as-built drawings.
- C. The as-built submission shall include a certification of completion signed by a Design Professional verifying that all permanent SWM BMPs have been constructed according to the approved plans and specifications.
- D. The municipality will review the as-built submission for consistency with the approved SWM site plan as well as actual conditions at the project site. After receipt of the completion certification by the Municipality, the Municipality may conduct a final inspection.

E. If an NPDES Permit for Stormwater Discharges Associated with Construction Activities was required for the Regulated Activity, a Notice of Termination (NOT) approval must be obtained upon completion of construction prior to final approval of the project by the Municipality.

§ 78-45. Municipality SWM site plan review and inspection fee.

Fees shall be established by Haverford Township to defray plan review and construction inspection costs incurred by the municipality. All fees shall be paid by the applicant at the time of SWM site plan submission. A review and inspection fee schedule shall be established by resolution of the Board of Commissioners based on the size of the regulated activity and based on the municipality's costs for reviewing SWM site plans and conducting inspections pursuant to § 78-43 Haverford Township shall periodically update the review and inspection fee schedule to ensure that review costs are adequately reimbursed.

§ 78-46 Expenses covered by fees.

A. The fees required by this article shall at a minimum cover:

- a. Administrative costs.
- b. The review of the SWM site plan by Haverford Township and the Township Engineer.
- c. The inspection of stormwater management facilities and drainage improvements during construction.
- d. The site inspections.
- e. The inspection of stormwater management facilities and drainage improvements during construction.
- f. Attendance at meetings.
- g. The final inspection upon completion of the stormwater management facilities and drainage improvements presented in the SWM site plan
- h. Any additional work required to enforce any permit provisions regulated by this article, correct violations, and assure proper completion of stipulated remedial actions.
- i. In addition, any and all costs for the review of plans and the inspection of stormwater management facilities and drainage improvements during construction by the municipal engineer, shall be deducted from the applicant's escrow account.
- j.

§ 78-47. Performance guarantee.

A. For SWM Site Plans that involve subdivision and land development, the applicant shall provide a financial guarantee to the Municipality for the timely installation and proper construction of all stormwater management controls as

(1) required by the approved SWM site plan equal to or greater than the full construction cost of the required controls; or

(2) The amount and method of payment provided for in the SALDO.

B. For other regulated activities, Haverford Township may require a financial guarantee from the applicant.

§ 78-48 Responsibilities for operations and maintenance (O&M) of stormwater controls and BMPs.

A. No regulated earth disturbance activities within Haverford Township shall commence until approval by the municipality of a stormwater control and BMP operations and maintenance plan that describes how the permanent (e.g., postconstruction) stormwater controls and BMPs will be properly operated and maintained.

B. The Township shall make the final determination on the continuing maintenance responsibilities prior to final approval of the SWM Site Plan. The municipality may require a dedication of such facilities as part of the requirements for approval of the SWM Site Plan. Such a requirement is not an indication that the municipality will accept the facilities. The Township reserves the right to accept or reject the ownership and operating responsibility for any portion of the stormwater management controls.

C. Facilities, areas, or structures used as SWM BMPs shall be enumerated as permanent real estate appurtenances and recorded as deed restrictions or conservation easements that run with the land.

A. The O&M Plan shall be recorded as a restrictive deed covenant that runs with the land.

B. The Municipality may take enforcement actions against an owner for any failure to satisfy the provisions of this Article.

D. The following items shall be included in the stormwater control and BMP operations and maintenance plan:

(1) Map(s) of the project area, in a form that meets the requirements for recording at the offices of the Recorder of Deeds of Delaware County. The contents of the maps(s) shall include, but not be limited to:

(a) Clear identification of the location and nature of permanent stormwater controls and BMPs;

(b) The location of the project site relative to highways, municipal boundaries, or other identifiable landmarks;

(c) Existing and final contours at intervals of two feet, or others as appropriate;

(d) Existing streams, lakes, ponds, or other bodies of water within the project site area;

(e) Other physical features, including flood hazard boundaries, sinkholes, streams, existing drainage courses, and areas of natural vegetation to be preserved;

(f) The locations of all existing and proposed utilities, sanitary sewers, and waterlines within 50 feet of property lines of the project site;

(g) Proposed final changes to the land surface and vegetative cover, including the

type and amount of impervious area that would be added;

- (h) Proposed final structures, roads, paved areas, and buildings; and
- (i) A fifteen-foot-wide access easement around all stormwater controls and BMPs that would provide ingress to and egress from a public right-of-way.

(2) A description of how each permanent stormwater control and BMP will be operated and maintained, and the identity and contact information associated with the person(s) responsible for operations and maintenance.

(3) The name of the project site, the name and address of the owner of the property, and the name of the individual or firm preparing the plan.

(4) A statement, signed by the landowner, acknowledging that the stormwater controls and BMPs are fixtures that can be altered or removed only after approval by Haverford Township.

C. The stormwater control and BMP operations and maintenance plan for the project site shall establish responsibilities for the continuing operation and maintenance of all permanent stormwater controls and BMPs, as follows:

(1) If a plan includes structures or lots which are to be separately owned and in which streets, sewers, and other public improvements are to be dedicated to Haverford Township, stormwater controls and BMPs may also be dedicated to and maintained by the municipality;

(2) If a plan includes operations and maintenance by a single ownership or if sewers and other public improvements are to be privately owned and maintained, then the operation and maintenance of stormwater controls and BMPs shall be the responsibility of the owner or private management entity.

§ 78-49. Municipal review of a stormwater control and BMP operations and maintenance plan.

A. The municipality shall review the stormwater control and BMP operations and maintenance plan for consistency with the purposes and requirements of this article and any permits issued by DEP.

B. The municipality shall notify the applicant in writing whether or not the stormwater control and BMP operations and maintenance plan is approved.

C. The municipality will require an as-built plan showing all constructed stormwater controls and BMPs and an explanation of any discrepancies with the approved operations and maintenance plan.

§ 78-50. Adherence to an approved stormwater control and BMP operations and maintenance plan.

It shall be unlawful to alter or remove any permanent stormwater control and BMP required by an approved stormwater control and BMP operations and maintenance plan or to allow the property to remain in a condition which does not conform to an approved stormwater control and BMP operations and maintenance plan.

§ 78-51. Operation and Maintenance Agreements for privately owned stormwater controls and BMPs.

- A. Prior to final approval of the SWM Site Plan, the property owner shall sign and record an Operation and Maintenance (O&M) Agreement as drafted by the Township (in a similar form as Appendix I, but as may be amended by the Township) covering all stormwater control facilities which are to be privately owned. The maintenance agreement shall be transferred with transfer of ownership in perpetuity.
 - a. The owner, successor and assigns shall maintain all facilities in accordance with the approved maintenance schedule in the O&M Agreement.
 - b. The owner shall convey to the Township conservation easements to assure access for periodic inspections by the Township and maintenance, as necessary.
 - c. The owner shall keep on file with the Township the name, address, and telephone number of the person or company responsible for maintenance activities; in the event of a change, new information shall be submitted by the owner to the Municipality within ten (10) working days of the change.
- B. The owner is responsible for operation and maintenance (O&M) of the SWM BMPs. If the owner fails to adhere to the O&M Agreement, the Township may perform the services required and charge the owner appropriate fees. Nonpayment of fees may result in a lien against the property.
- C. Other items may be included in the agreement where determined necessary to guarantee the satisfactory operation and maintenance of all permanent stormwater controls and BMPs. The agreement shall be subject to the review and approval of the Township.

§ 78-52. Stormwater management easements.

- A. Stormwater management easements are required for all areas used for off-site stormwater control, unless a waiver is granted by the Township.
- B. Stormwater management easements shall be provided by the applicant or property owner if necessary for access for inspections and maintenance or the preservation of stormwater runoff conveyance, infiltration, and detention areas and other stormwater controls and BMPs by persons other than the property owner. The purpose of the easement shall be specified in any agreement under § 78-51.

§ 78-53. Maintenance agreement for privately owned stormwater facilities.

- A. Prior to final approval of the site's SWM site plan, the applicant shall sign and record the Operation and Maintenance (O&M) Agreement as drafted by the Township, covering all stormwater control facilities that are to be privately owned.
- B. Other items may be included in the agreement where determined necessary to guarantee the satisfactory maintenance of all facilities. The Operation and Maintenance (O&M) Agreement shall be subject to the review and approval of the Municipal Solicitor and Board of Commissioners.

§ 78-54. Recording of an approved stormwater control and BMP operations and

maintenance plan and related agreements.

A. The owner of any land upon which permanent stormwater controls and BMPs will be placed, constructed, or implemented, as described in the stormwater control and BMP operations and maintenance plan, shall record the following documents in the Office of the Recorder of Deeds for Delaware County within 15 days of approval of the stormwater control and BMP operations and maintenance plan by the municipality:

- (1) The operations and maintenance plan, or a summary thereof,
- (2) Operations and Maintenance Agreement for Privately Owned Stormwater Controls and BMPs under § 78-51; and
- (3) Stormwater Management Easements under § 78-52.

B. The municipality may suspend or revoke any approvals granted for the project site upon discovery of failure on the part of the owner to comply with this section.

§ 78-55. Municipal Stormwater Control and BMP Operation and Maintenance Fund.

A. The Township shall inspect SWM BMPs, facilities, and/or structures installed under this Ordinance according to the following frequencies, at a minimum, to ensure the BMPs, facilities and/or structures continue to function as intended. Persons installing stormwater controls or BMPs shall be required to pay a specified amount to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to help defray costs of periodic inspections and maintenance expenses. The amount of the deposit shall be determined as follows:

(1) If the stormwater control or BMP is to be privately owned and maintained, the deposit shall cover the cost of periodic inspections performed by Haverford Township for a period of 10 years, as estimated by the municipal Engineer. After that period of time, inspections will be performed at the expense of the municipality. The following minimum inspection frequencies are required:

- 1) Annually for the first 5 years.
- 2) Once every 3 years thereafter
- 3) During or immediately after the cessation of a 25-year or greater storm, as determined by the Municipal Engineer.
- 4) The Township Engineer may request that the landowners or landowner's designee submit an inspection report after the cessation of a 10-year or greater storm event if there is reason to believe that a BMP has sustained damage that impacts its ability to function as designed and if the BMP's failure would result in damage to downgradient properties.

(2) If the stormwater control or BMP is to be owned and maintained by Haverford Township, the deposit shall cover the estimated costs for maintenance and inspections for 10 years. The municipal Engineer will establish the estimated costs utilizing information submitted by the applicant. The following minimum inspection frequencies are required:

- 1) Annually for the first 5 years.
 - 2) Once every 3 years thereafter
 - 3) During or immediately after the cessation of a 25-year or greater storm, as determined by the Municipal Engineer.
- (3) The above referenced inspections shall be conducted during or immediately following precipitation events or in dry weather conditions if the BMP design parameters include dewatering with a specified period of time. A written inspection report shall be created to document each inspection. The inspection report shall contain the date and time of the inspection, the individual(s) who completed the inspection, the location of the BMP, Stormwater Management Facility or structure inspected, observations on performance, and recommendations for improving performance, if applicable.
- (4) The amount of the deposit to the fund shall be converted to present worth of the annual series values. The municipal Engineer shall determine the present worth equivalents, which shall be subject to the approval of the governing body.
- B. If a stormwater control or BMP is proposed that also serves as a recreational facility (e.g., ball field or lake), Haverford Township may reduce or waive the amount of the maintenance fund deposit based upon the value of the land for public recreational purpose.
- C. If at some future time a stormwater control or BMP (whether publicly or privately owned) is eliminated due to the installation of storm sewers or other storage facility, the unused portion of the maintenance fund deposit will be applied to the cost of abandoning the facility and connecting to the storm sewer system or other facility. Any amount of the deposit remaining after the costs of abandonment are paid will be returned to the depositor.
- D. If stormwater controls or BMPs are accepted by Haverford Township for dedication, the municipality may require persons installing stormwater controls or BMPs to pay a specified amount to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to help defray costs of operations and maintenance activities. The amount may be determined as follows:
- (1) The amount shall cover the estimated costs for operations and maintenance for 10 years, as determined by Haverford Township.
 - (2) The amount shall then be converted to present worth of the annual series values.
- E. If a stormwater control or BMP is proposed that also serves as a recreational facility (e.g., ball field or lake), Haverford Township may adjust the amount due accordingly.
- F. Haverford Township shall require applicants to pay a fee to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to cover long-term maintenance of stormwater controls and BMPs.
- G. Haverford Township may require applicants to pay a fee to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to cover inspections, long term maintenance of stormwater BMPs and conveyances, and stormwater related problems

which may arise from the land development and earth disturbance.

§ 78-56. Prohibited Discharges and Connections.

- A. Any drain or conveyance, whether on the surface or subsurface, that allows any non-stormwater discharge including sewage, process wastewater, and wash water to enter the Township's separate storm sewer system, riparian buffers, wetlands, or other waters of this Commonwealth, and any connections to the storm drain system from indoor drains and sinks, is prohibited.
- B. No person in Haverford Township shall allow, or cause to allow, stormwater discharges into a regulated small MS4, or discharges into waters of this Commonwealth, which are not composed entirely of stormwater, except as provided in subsection C below, and discharges authorized under a state or federal permit.
- C. The following discharges are authorized unless they are determined to be significant contributors to pollution to a regulated small MS4 or to the waters of this Commonwealth:
 - a. Discharges from firefighting activities.
 - b. Discharges from potable water sources including water line flushing and fire hydrant flushing, if such discharges do not contain detectable concentrations of Total Residual Chlorine (TRC).
 - c. Non-contaminated irrigation drainage water.
 - d. Routine external building washdown (which does not use detergents or other compounds).
 - e. Non-contaminated HVAC condensation and water from geothermal systems.
 - f. Residential (i.e., not commercial) vehicle wash water where cleaning agents are not utilized.
 - g. Springs and water from crawl space pumps.
 - h. Uncontaminated water from foundation or from footing drains.
 - i. Flows from riparian habitats and wetlands.
 - j. Lawn watering.
 - k. Pavement washwaters where spills or leaks of toxic or hazardous materials have not occurred (unless all spill material has been removed) and where detergents are not used.
 - l. Uncontaminated groundwater
 - m. Non-contaminated hydrostatic test water discharges if such discharges do not contain detectable concentrations of TRC.
 - n. Diverted stream flows.
- D. In the event that the municipality determines that any of the discharges identified in

Subsection C significantly contribute pollutants to a regulated small MS4 or to the waters of this Commonwealth, or is so notified by DEP, the Township will notify the responsible person(s) to cease the discharge.

- E. Upon notice provided by the Township under §78-56.D the discharger will have a reasonable time, as determined by the Township, to cease the discharge consistent with the degree of pollution caused by the discharge.
- F. Nothing in this section shall affect a discharger's responsibilities under state law.

§ 78-57. Roof Drains and Sump Pumps.

- A. Roof drains and sump pumps shall not be connected to sanitary sewers.
- B. Roof drains and sump pumps shall not be connected to streets, storm sewers, or roadside ditches except on a case by case basis as determined by the Township.
- C. Roof drains and sump pumps shall discharge to infiltration areas or vegetative BMPs to the maximum extent practicable where advantageous to do so.

§ 78-58. Prohibited connections.

The following connections are prohibited, except as provided in § 78-56.C above:

- A. Any drain or conveyance, whether on the surface or subsurface, which allows any non-stormwater discharge including sewage, process wastewater, and wash water, to enter the separate storm sewer system, and any connections to the storm drain system from indoor drains and sinks.
- B. Any drain or conveyance connected from a commercial or industrial land use to the separate storm sewer system which has not been documented in plans, maps, or equivalent records and approved by Haverford Township.
- C. Any drain or conveyance that delivers non-stormwater discharges directly into wetlands, riparian buffers, or other waters of the Commonwealth is prohibited.

§ 78-59. Alteration of SWM BMPs

- A. No person shall modify, remove, fill, landscape, or alter any existing stormwater control or BMP unless it is part of an approved maintenance program without the written approval of Haverford Township.
- B. No person shall place any structure, fill, landscaping, or vegetation into a stormwater control or BMP or within a drainage easement which would limit or alter the functioning of the stormwater control or BMP without the written approval of Haverford Township.

§ 78-60. Right-of-entry.

- A. Upon presentation of proper credentials, the Township or its designated agent may enter at reasonable times upon any property within the municipality to inspect the condition, implementation, or operation and maintenance of all erosion and sediment controls and permanent stormwater BMPs, conveyances, or other stormwater management facilities both during and after the completion of the regulated activity, or for compliance with any

requirement of the stormwater structures and facilities in regard to any aspect regulated by this Ordinance.

- B. Stormwater control and BMP owners and operators shall allow persons working on behalf of Haverford Township ready access to all parts of the premises for the purposes of determining compliance with this article.
- C. Persons working on behalf of Haverford Township shall have the right to temporarily locate on any stormwater control or BMP in the municipality such devices as are necessary to conduct monitoring and/or sampling of the discharges from such stormwater control or BMP.
- D. Unreasonable delays in allowing the municipality access to a stormwater control or BMP is a violation of this article.
- E. If the property owner or representative does not grant access to the Municipality within 24 hours of the notification, it will be a violation of this Ordinance.

§ 78-61. Public nuisance.

- A. The violation of any provision of this article is hereby deemed a public nuisance.
- B. Each day that a violation continues shall constitute a separate violation.

§ 78-62. Enforcement generally.

- A. Whenever Haverford Township finds that a person has violated a prohibition or failed to meet a requirement of this article, the municipality may order compliance by written notice to the responsible person. Such notice may, without limitation, require the following remedies:
 - a. Performance of monitoring, analyses, and reporting;
 - b. Elimination of prohibited connections or discharges;
 - c. Cessation of any violating discharges, practices, or operations;
 - d. Abatement or remediation of stormwater pollution or contamination hazards and the restoration of any affected property;
 - e. Payment of a fine to cover administrative and remediation costs;
 - f. Implementation of stormwater controls and BMPs; and
 - g. Operation and maintenance of stormwater controls and BMPs.
- B. Such notification shall set forth the nature of the violation(s) and establish a time limit for correction of these violations(s). Said notice may further advise that, if applicable, should the violator fail to take the required action within the established deadline, the work will be done by Haverford Township or designee, and the expense thereof shall be charged to the violator.
- C. Failure to comply within the time specified shall also subject such person to the penalty provisions of this article. All such penalties shall be deemed cumulative and shall not prevent the municipality from pursuing any and all other remedies available in law or

equity.

§ 78-63. Suspension and revocation of permits and approvals.

- A. Any building, land development, or other permit or approval issued by the Township pursuant to this Ordinance may be suspended or revoked for:
 - a. Non-compliance with or failure to implement any provision of the permit.
 - b. A violation of any provision of this Ordinance or any other applicable law, ordinance, rule, or regulation relating to the regulated activity.
 - c. The creation of any condition or the commission of any act during construction or development which constitutes or creates a hazard, nuisance, pollution, or endangers the life or property of others.
- B. A suspended permit or approval may be reinstated by the Municipality when:
 - a. The Township engineer or designee has inspected and approved the corrections to the stormwater controls and BMPs or the elimination of the hazard or nuisance.
 - b. The Township is satisfied that the violation or the article, law, or rule and regulations has been corrected.
- C. A permit or approval that has been revoked by the Township cannot be reinstated. The applicant may apply for a new approval under the provisions of this Ordinance.
- D. Prior to revocation or suspension of a permit and at the request of the applicant, the governing body shall schedule a hearing to discuss the noncompliance if there is no immediate danger to life, public health, or property. The expense of a hearing shall be the applicant's responsibility.

§ 78-64. Violations and penalties.

- A. Any person violating the provisions of this article shall be guilty of a misdemeanor and upon conviction shall be subject to a fine of not more than \$1,000 for each violation, recoverable with costs, or imprisonment of not more than 90 days, or both. Each day that the violation continues shall be a separate offense.
- B. In addition, the Township, through its Solicitor, may institute injunctive, mandamus, or any other appropriate action or proceeding at law or in equity for the enforcement of this article. Any court of competent jurisdiction shall have the right to issue restraining orders, temporary or permanent injunctions, mandamus, or other appropriate forms of remedy or relief.

§ 78-65. Notification

In the event that a person fails to comply with the requirements of this article or fails to conform to the requirements of any permit issued hereunder, the Township shall provide written notification of the violation. Such notification shall state the nature of the violation(s) and establish a time limit for correction of these violation(s). Failure to comply within the time specified shall subject such person to the penalty provisions of this article. All such

penalties shall be deemed cumulative and shall not prevent the Township from pursuing any and all remedies. It shall be the responsibility of the owner of the real property on which any regulated activity is proposed to occur, is occurring, or has occurred to comply with the terms and conditions of this article.

§78- 66. Enforcement

The Board of Commissioners is hereby authorized and directed to enforce all of the provisions of this article. All inspections regarding compliance with the SWM site plan shall be the responsibility of the Township Engineer or other qualified persons designated by the Board of Commissioners.

- A. A set of design plans approved by the Township shall be on file at the site throughout the duration of the construction activity. Periodic inspections may be made by the Township or designee during construction.
- B. It shall be unlawful for any person, firm, or corporation to undertake any regulated activity under § 78-17 on any property except as provided for in the approved SWM site plan and pursuant to the requirements of this article. It shall be unlawful to alter or remove any control structure required by the SWM site plan pursuant to this article or to allow the property to remain in a condition which does not conform to the approved SWM site plan.
- C. At the completion of the project and as a prerequisite for the release of the performance guarantee, the owner or his representatives shall:
 - (1) Provide a certification of completion from an engineer, architect, surveyor or other qualified person verifying that all permanent facilities have been constructed according to the plans and specifications and approved revisions thereto.
 - (2) Provide a set of as-built (record) drawings.
- D. After receipt of the certification by Haverford Township, a final inspection shall be conducted by the municipal Engineer or designated representative to certify compliance with this article.
- E. Occupancy permit. An occupancy permit shall not be issued unless the certification of completion pursuant to § 78-66.C(1) has been secured. The occupancy permit shall be required for each lot owner and/or applicant for all subdivisions and land developments in Haverford Township.

§ 78-67. Appeals.

- A. Any person aggrieved by any action of the Township or its designee may appeal to the Board of Commissioners of Haverford Township within 30 days of that action.
- B. Any person aggrieved by any decision of the Board of Commissioners of Haverford Township may appeal to the County Court of Common Pleas in the County where the activity has taken place within 30 days of the municipal decision.

SECTION II. ATTACHMENTS TO CHAPTER 78. The following attachments, consolidated

herein and attached to this Ordinance as Exhibit "A", shall serve as the attachments/appendices to Chapter 78, as so referenced above.

Attachment 1 - Table 105.1 Applicability

Attachment 2 - Appendix A Watershed Map

Attachment 3 - Appendix B

Attachment 4 - Appendix C-1 SWM Site Plan Application

Attachment 5 - Appendix C-2 SWM Site Plan Checklist

Attachment 6 - Appendix D Review Procedure Flowchart, Darby-Cobbs Creeks Watershed Stormwater Mgmt

Attachment 7 - Appendix E LID Practices

Attachment 8 - Appendix F Design Criteria

Attachment 9 - Appendix I Operations and Management Agreement

Attachment 10 - Appendix J Riparian Buffer Trail Guidelines

SECTION III. REDLINED ORDINANCE FOR REFERENCE. For ease of reference, the majority of deletions, additions and changes to Chapter 78, and a summary of the changes to the Attachments, are attached hereto as Exhibit "B".

SECTION IV: REPEALER. All Ordinances or parts of Ordinances inconsistent herewith or in conflict with any of the specific terms enacted hereby, to the extent of said inconsistencies or conflicts, are hereby specifically repealed.

SECTION V: REVISIONS. The Haverford Township Board of Commissioners does hereby reserve the right, from time to time, to adopt modifications of, supplements to, or amendments of this Ordinance.

SECTION VI: SEVERABILITY. If any section, sentence, clause, phrase or word of this Ordinance shall be declared illegal, invalid or unconstitutional by any Court of competent jurisdiction, such declaration shall not prevent, preclude or otherwise foreclose enforcement of any of the remaining portions of this Ordinance.

SECTION VII: EFFECTIVE DATE. This amendment shall become effective upon the legal date of its adoption.

SECTION VIII: FAILURE TO ENFORCE NOT A WAIVER. The failure of Haverford Township to enforce any provision of this Ordinance shall not constitute a waiver by the Township of its rights of future enforcement hereunder

Enacted and Adopted this day of , 2024.

HAVERFORD CODE

Section	Type of Project	Proposed Impervious Surface				Earth Disturbance	
		499 square feet	500-999 square feet	1,000 square feet to 1 acre	Greater than 1 acre	5,000 square feet to 1 acre	Greater than 1 acre
Erosion and Sediment Pollution Control Plan Submission to the Conservation District	Earth Disturbance	See "earth disturbance requirements"	See "earth disturbance requirements"	See "earth disturbance requirements"	See "earth disturbance requirements"	Yes	Yes
		(Refer to municipal earth disturbance requirements, as applicable)					

Legend:

Yes - Drainage plan required with associated section provision.

N/A - Not applicable – exempt from drainage plan submission.

Exempt - Exempt from required section provision; drainage plan submission may still be required if other section provisions are applicable (yes in box).

Modified - Modified drainage plan required.

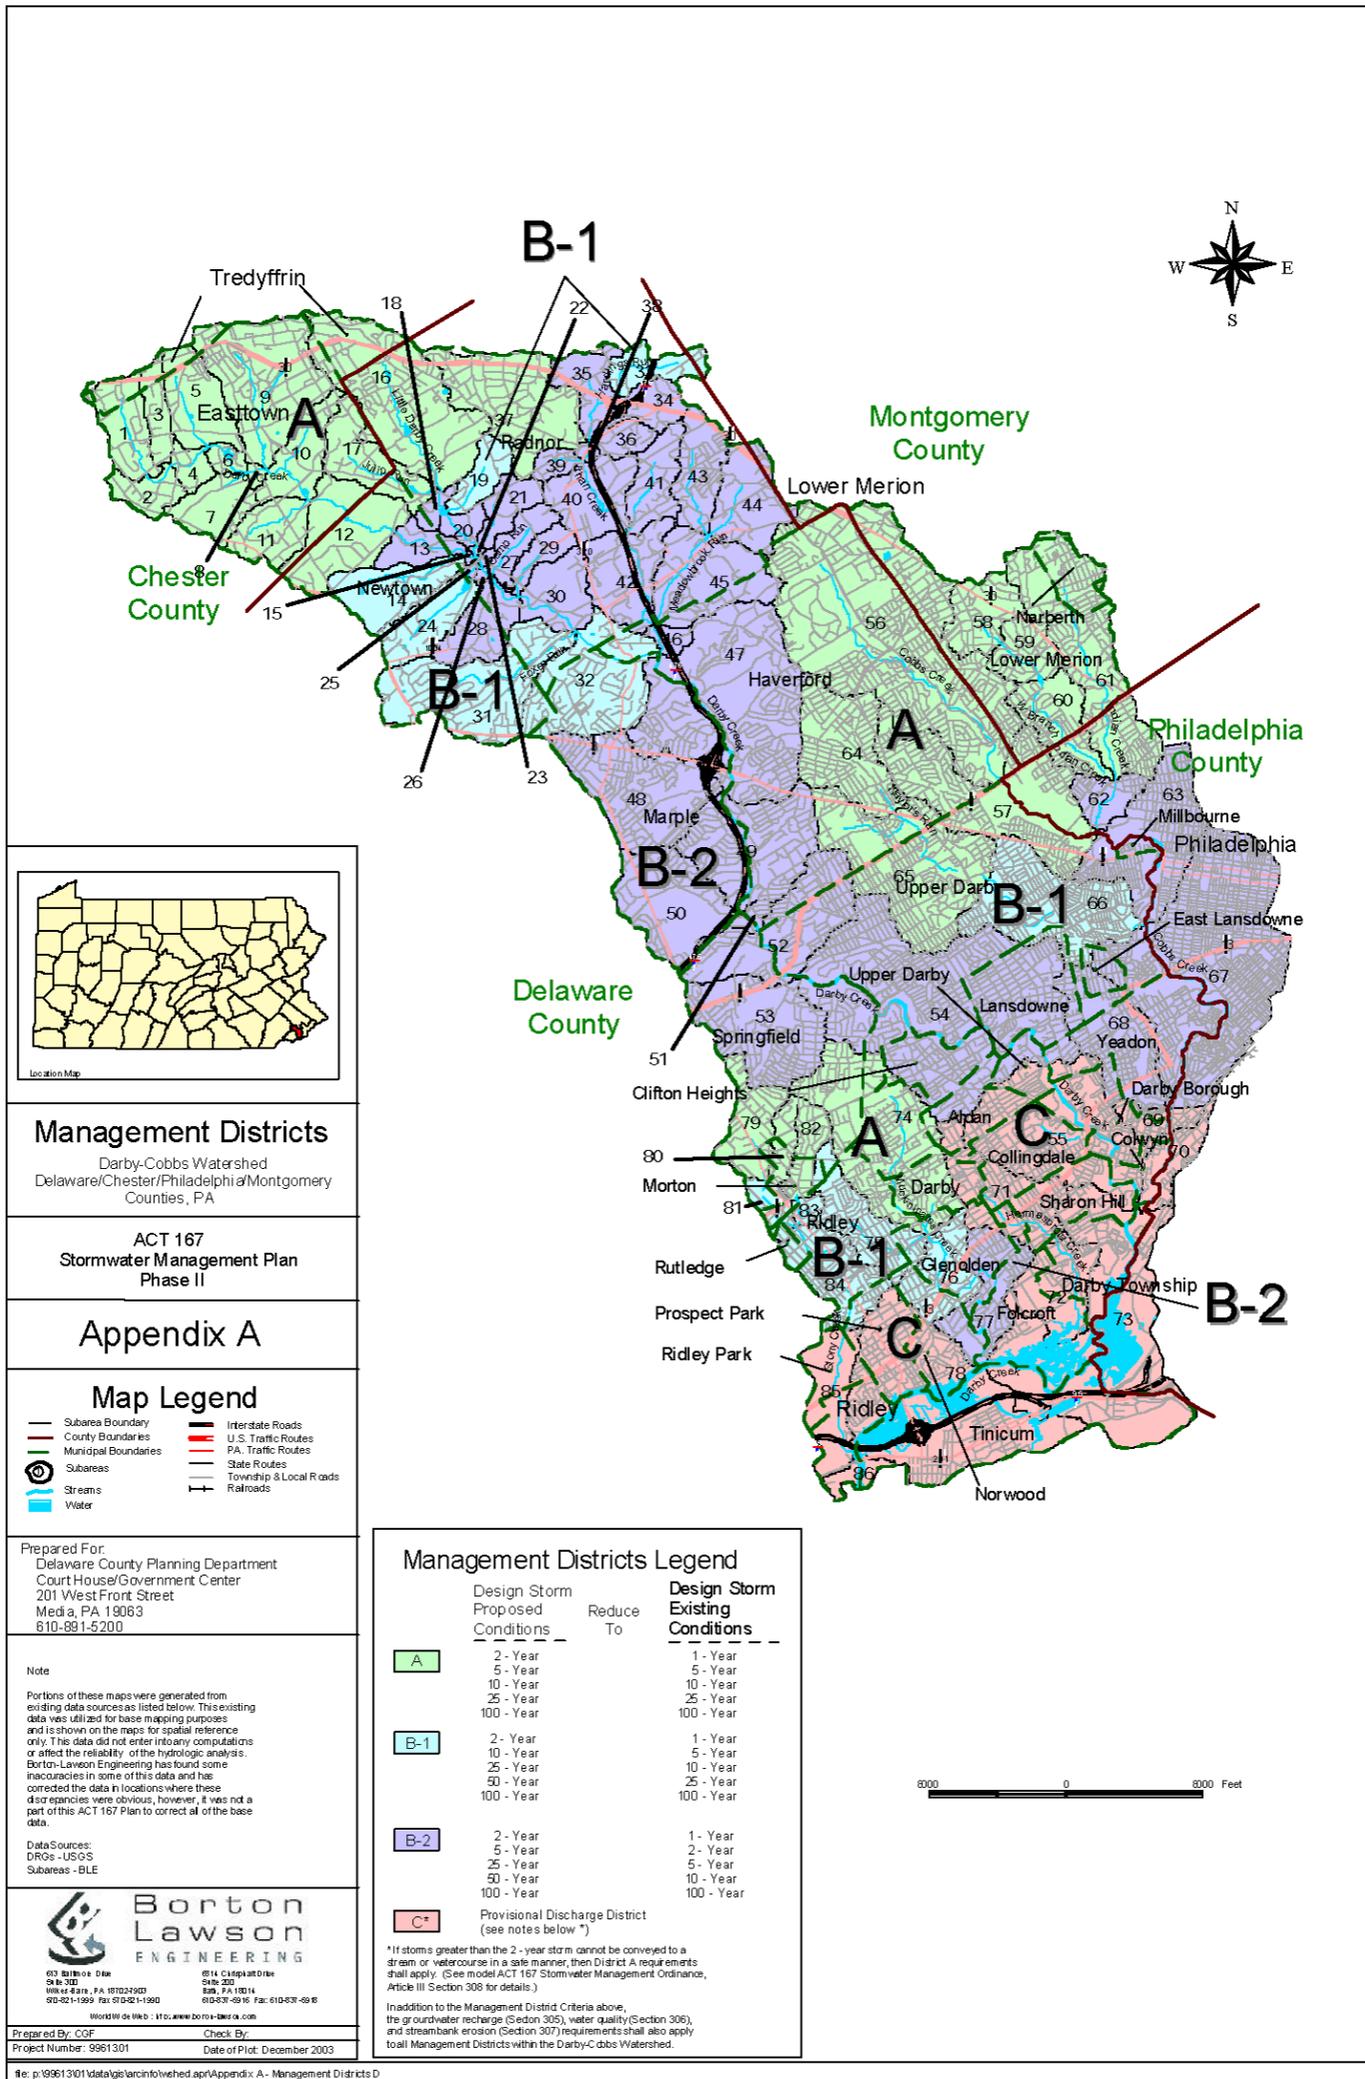

Notes:

- Sites with less than 1,000 square feet of regulated impervious surface, but between 5,000 square feet and one acre of earth disturbance must submit a drainage plan to Haverford Township which need only consist of the items in § 78-25A(2) and (4); B(7), (8), (11) and (22); and D(1) and (3) and related supportive material needed to determine compliance with §§ 78-33 and 78-37.
- Sites with more than 1,000 square feet, but less than 2,000 square feet of regulated impervious surface must submit a drainage plan; however, it need not consist of the items in §§ 78-36 and 78-37.

In addition to the Management District Criteria above, the groundwater recharge (Section 305), water quality (Section 306), and streambank erosion (Section 307) requirements shall also apply to all Management Districts within the Darby-Cobbs Watershed.

ORDINANCE APPENDIX B

Simplified Approach to Stormwater Management for Small Projects

Applicability: Stormwater management procedures for projects with between five hundred (500) square feet and (999) square feet of proposed impervious area.

SIMPLIFIED APPROACH TO STORMWATER MANAGEMENT FOR SMALL PROJECTS

Introduction

The following procedures have been developed to allow homeowners to comply with stormwater management criteria for new projects to meet the requirements of the Act 167 Stormwater Management Ordinance of the Municipality including sizing, designing, locating, and installing on-lot measures, referred to herein as “Best Management Practices” (BMPs). Pennsylvania Act 167 was authorized on October 4, 1978 (32 P.S., P.L. 864) and gave Pennsylvania municipalities the power to regulate activities that affect stormwater runoff and surface and groundwater quantity and quality.

Individual home construction projects on single-family lots which result in between 500 square feet and 999 square feet of impervious area (including the building footprint, driveway, sidewalks, and parking areas) are not required to submit formal drainage plans to the Municipality or County; however, they are still required to address water quality and infiltration goals as outlined in this Simplified Approach document. If the guidelines presented in this brochure are followed, the individual homeowner will not require professional services to comply with these water quality and infiltration goals.

Section B.1 describes requirements and a simplified method for designing a suitable BMP, and a description of what needs to be included on the simple sketch plan. Section B.2 presents definitions of key terms. Section B.3 presents options of BMPs that can be considered for on-lot stormwater management. An example of how to obtain the size and dimensions of a BMP is explained in Section B.4. Section B.5 describes the requirements to be met for the modified Operation, Maintenance, and Inspection Plan.

The Simplified Approach requires:

- The first 1” of rainfall runoff from new impervious surfaces to be captured (see definition in Section B.2).

The purpose of this is to help reduce stormwater runoff in the community, to maintain groundwater recharge, to prevent degradation of surface and groundwater quality, and to otherwise protect water resources and public safety.

What needs to be sent to the Municipality?

Even though a formal drainage plan is not required for individual lot owners, the Simplified Method worksheet found in Table B-4 and a simple sketch plan containing the features described in Step 5 of Section B.1 needs to be submitted to the Municipality, and if applicable, the contractor prior to construction. The Operation and Maintenance Agreement found in Section B.5 needs to be signed and submitted with the simple sketch plan to the Municipality for approval.

B.1 Determination of Simplified Approach Volume Requirements

All proposed impervious areas must be included in the determination of the amount of new impervious areas and the size of proposed BMPs needed to control stormwater. Proposed impervious areas on an individual residential lot include: roof area, pavement, sidewalks, driveways, patios, porches, permanent pools, or parking areas. Sidewalks, driveways, or patios that are constructed with gravel or pervious pavers that will not be converted to an impervious surface in the future need not be included in this calculation. Therefore, the amount of proposed impervious area can be reduced for proposed driveways, patios, and sidewalks through the use of gravel, pervious pavement, and turf pavers. All proposed impervious areas must be constructed so that runoff is conveyed to a BMP; no runoff can be directed to storm sewers, inlets, or other impervious areas (i.e., street).

In addition, the use of low impact development is recommended to further minimize the effect of the new construction on water, land, and air. Low impact development is a method of development that incorporates design techniques that include: minimizing the amount of land disturbance, reducing impervious cover, disconnecting gutters and directing runoff to vegetated areas to infiltrate, and redirecting the flow of runoff from impervious driveways to vegetated areas instead of to the street or gutter.

Below are the steps that must be undertaken to meet the Ordinance requirements. The results obtained for each step must be included in the Simplified Method Worksheet found in Table B-4:

STEP 1 – Determine the total area of all proposed impervious surfaces that will need to drain to one or more BMPs. Determine locations where BMPs need to be placed so that runoff from all of the proposed impervious surfaces can be captured. Select the BMPs to be used and determine the requirements of each from Section B.3. For instance, the back half of a garage may drain 200 square feet of roof to a rain barrel, and the front half of a garage may drain 200 square feet of roof and 540 square feet of driveway to a bioretention area. Then, obtain the required storage volume and surface area needed for each of the proposed BMPs from the appropriate heading below.

For Rain Barrels/Cisterns

STEP 2 –Select the proposed impervious area value in Column 1 of Table B-1 that is closest to, but not less than, the determined value.

STEP 3 – Determine the volume that needs to be provided in cubic feet and gallons to satisfy the volume requirements using Columns 2 and 3 in Table B-1.

Table B-1: Simplified Method - Calculating Rain Barrel/Cistern Storage Volume for 1” Rainfall¹

Column 1	Column 2	Column 3	
Proposed Impervious Area (square feet)	Volume of Rain Barrel/Cistern ² (cubic feet)	Volume of Rain Barrel/Cistern (gallons)	
<i>I</i>	V_{RBcf}	V_{RBgal}	
Sum of all Proposed Impervious Areas	$(1*(1/12)*I)/0.75=V_{RBcf}$	$VRBcf * 7.48=VRBgal$	
50	6	42	↑ Rain Barrel ↓
100	11	83	
150	17	125	
200	22	166	
250	28	208	
300	33	249	
350	39	291	
400	44	332	
450	50	374	
500	56	416	
550	61	457	Cistern ↓
600	67	499	
650	72	540	
700	78	582	
750	83	623	
800	89	665	
850	94	706	
900	100	748	
950	106	790	
999	111	830	

¹The typical volume of a rain barrel is between 50-200 gallons, so more than 1 rain barrel may be needed. Larger volumes may require a cistern.

²Assume that the rain barrel/cistern is 25% full

For Rain Gardens/Bioretenction or Dry Well #1:

STEP 2 – Select the proposed impervious area value in Column 1 of Table B-2 that is closest to, but not less than, the determined value.

STEP 3 - Determine the volume that needs to be provided in cubic feet to satisfy the volume requirements using Column 2 in Table B-2.

STEP 4 – Using the value from Column 2 determined above, select the depth (D) of the proposed BMP, and then simply determine the surface area needed for that depth from Column 3 of Table B-2.

Note: The arrows under Column 3 in Table B-2 indicate which range of depths is appropriate for each BMP. To determine the depth based on the area, select an area that corresponds to the required volume that is closest to, but not more than the area to be used. To determine the area based on the depth, select a depth that is closest to, but not less than, the depth that is to be used.

Table B-2: Simplified Method - Calculating Rain Garden/Bioretenation and Dry Well #1 Storage Volume and Surface Area for 1" Rainfall

Column 1	Column 2	Column 3									
Proposed Impervious Area (square feet)	Volume of Rain Garden/Bioretenation or Dry Well #1 ¹ (cubic feet)	Surface Area of Rain Garden/Bioretenation or Dry Well #1 Acceptable Depths for Each BMP are indicated by the arrows below (square feet)

450	38	75	38	25	19	15	13	11	9		
500	42	83	42	28	21	17	14	12	10		
550	46	92	46	31	23	18	15	13	11		
600	50	100	50	33	25	20	17	14	13		
650	54	108	54	36	27	22	18	15	14		
700	58	117	58	39	29	23	19	17	15		
750	63	125	63	42	31	25	21	18	16		
800	67	133	67	44	33	27	22	19	17		
850	71	142	71	47	35	28	24	20	18		
900	75	150	75	50	38	30	25	21	19		
950	79	158	79	53	40	32	26	23	20		
999	83	167	83	56	42	33	28	24	21		

¹Assume that the rain garden/bioretenation or the dry well #1 are 0% full

For Infiltration Trench or Dry Well #2:

STEP 2 – Select the proposed impervious area value in Column 1 of Table B-3 that is closest to, but not less than, the determined value.

STEP 3 - Determine the volume that needs to be provided in cubic feet to satisfy the volume requirements using Column 2 in Table B-3.

STEP 4 – Using the value from Column 2 determined above, select the depth (D) of the proposed BMP, and then simply determine the surface area needed from Column 3 of Table B-3.

Note: The arrows under Column 3 in Table B-3 indicate which range of depths is appropriate for each BMP. To determine the depth based on the area, select an area that corresponds to the required volume that is closest to, but not less than, the area to be used. To determine the area based on the depth, select a depth that is closest to, but not less than, the depth that is to be used.

STEP 5 - Sketch a simple site plan as shown in Figure B-1 that includes:

- Name and address of the owner of the property, and or name and address of the individual preparing the plan, along with the date of submission.
- Location of proposed structures, driveways, or other paved areas with approximate size in square feet.
- Location, orientation, and dimensions of all proposed BMPs. For all rain gardens/bioretenion, infiltration trenches, and dry wells, the length, width, and depth must be included on the plan. For rain barrels or cisterns the volume must be included.
- Location of any existing or proposed on-site septic system and/or potable water wells showing rough proximity to infiltration facilities.
- Location of any existing waterbodies such as; streams, lakes, ponds, wetlands, or other waters of the Commonwealth within fifty (50) feet of the project site, and the distance to the project site and/or BMPs. The project or BMPs cannot be located less than fifty (50) feet away from a perennial or intermittent stream. If an existing buffer is legally prescribed (i.e., deed, covenant, easement, etc.) and it exceeds the requirements of this Ordinance, the existing buffer shall be maintained.
- Location of all existing structures including buildings, driveways, and roads within fifty (50) feet of the project site.

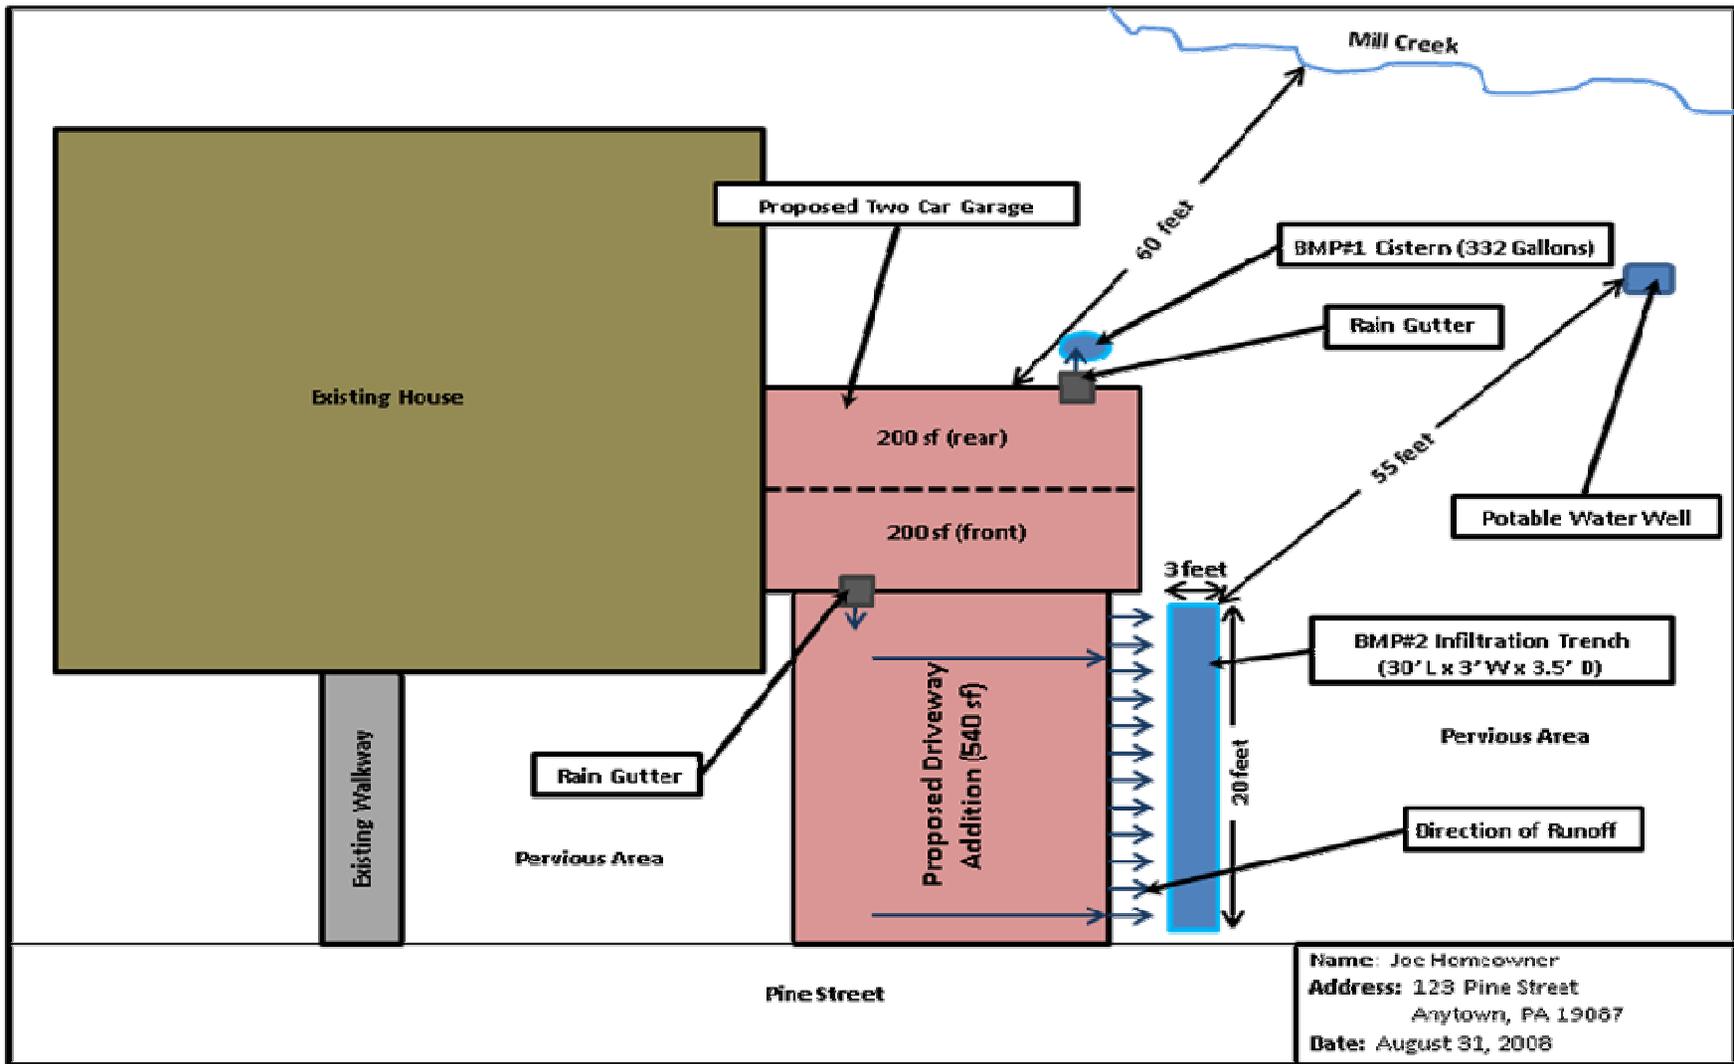

Fill in the simplified method worksheet found in Table B-4, then submit the worksheet and the simple site sketch to the Municipality. Additionally, the operation and maintenance agreement found in Section B.5 must be signed and submitted to the Municipality.

B.2 Definitions

Best Management Practice (BMP) - Activities, facilities, designs, measures, or procedures used to manage stormwater impacts from land development, to protect and maintain water quality and groundwater recharge and to otherwise meet the purposes of the Municipal Stormwater Management Ordinance, including but not limited to infiltration trenches, dry wells, bioretention, rain gardens, permeable paving, rain barrels, and cisterns.

Capture - Collecting runoff to be stored for reuse or allowed to slowly infiltrate into the ground.

Geotextile - A fabric manufactured from synthetic fiber that is used to achieve specific objectives, including infiltration, separation between different types of media (i.e., between soil and stone), or filtration.

Hotspot - Areas where land use or activities generate highly contaminated runoff, with concentrations of pollutants that are higher than those that are typically found in stormwater (e.g., vehicle salvage yards and recycling facilities, vehicle fueling stations, fleet storage areas, vehicle equipment and cleaning facilities, and vehicle service and maintenance facilities).

Impervious Surface - A surface that prevents the infiltration of water into the ground. Impervious surfaces include, but are not limited to, streets, sidewalks, pavements, swimming pools, driveway areas or roofs.

Infiltration - Movement of surface water into the soil, where it is absorbed by plant roots, evaporated into the atmosphere, or percolated downward to recharge groundwater.

Low Impact Development - A land development and construction approach that uses various land planning, design practices, and technologies to simultaneously conserve and protect natural resource systems, and reduce infrastructure costs.

Pervious Surface - Any surface that is not impervious.

Runoff - Any part of precipitation that flows over the land surface.

Stormwater - Drainage runoff from the surface of the land resulting from precipitation or snow or ice melt.

Void Ratio - The ratio of the volume of void space to the volume of solid substance in any material.

B.3 Description of BMPs

The following is a description of several types of BMPs that could be implemented. The requirements of each BMP as described below are taken directly from the PA BMP Manual. Refer to the PA BMP Manual which can be found on the PA Department of Environmental Protection's website.

Rain Barrels/Cisterns

Rain barrels are large containers that collect drainage from roof leaders and temporarily store water to be released to lawns, gardens, and other landscaped areas after the rainfall has ended. Rain barrels are typically between 50 and 200 gallons in size. The stored water can also be used as a non-potable water supply. Cisterns are larger than rain barrels having volumes of 200 gallons or more, and can be placed on the surface or underground. Figures B-2 and B-3 show examples of rain barrels and cisterns, respectively, that could be used. Rain barrels and cisterns are manufactured in a variety of shapes and sizes. All of these facilities must make provisions for the following items:

- There must be a means to release the water stored between storm events in order for the necessary storage volume to be available for the next storm.
- Stormwater must be kept from entering other potable systems, and pipes and storage units must be clearly marked "Do Not Drink."
- An overflow outlet should be placed a few inches below the top with an overflow pipe to divert flow away from structures.
- Use screens to filter debris, and covers (lids) to prevent mosquitoes.
- Make sure cisterns are watertight and do not leak.
- Rain barrels are typically assumed to be 25% full to calculate volume since they are not always emptied before each storm.*

Figure B-2: Rain Barrels

Source (pic on left): <http://www.rfcity.org/Eng/Stormwater/YourProperty/YourProperty.htm>
Source (pic on right): <http://www.floridata.com/tracks/transplantedgardener/Rainbarrels.cfm>

*This 25% has already been taken into account in Table 3.

Figure B-3: Cisterns

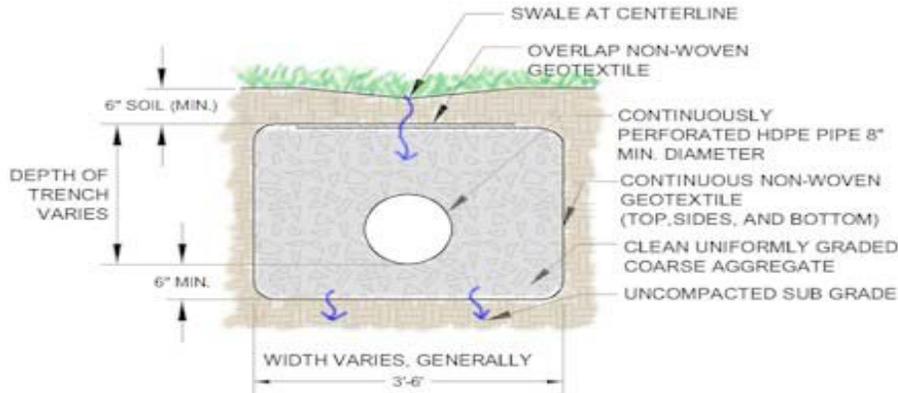

Source (for both pics): Pennsylvania Stormwater BMP Manual (2006)

Infiltration Trench

An infiltration trench is a long, narrow, rock-filled trench with or without a perforated pipe that receives stormwater runoff and has no outlet. Runoff is stored in the void space between the stones and in the pipe and infiltrates through the bottom and into the underlying soil matrix. Infiltration trenches perform well for removal of fine sediment and associated pollutants. Figure B-4 shows a typical infiltration trench configuration. Infiltration trenches shall incorporate or make provisions for the following elements:

- Perforated pipe is to be set level.
- The width is limited to between **3 and 8 feet**, and the depth ranges from **2 to 6 feet**.
- Trench should be wrapped in nonwoven geotextile (see definition in Section B.2) on the top, sides, and bottom.
- There should be a positive overflow that allows stormwater that cannot be stored or infiltrated to be discharged into a nearby vegetated area.
- Roof downspouts may be connected to infiltration trenches, but should contain a cleanout to collect sediment and debris before entering the infiltration area.
- Infiltration testing is recommended to ensure that the soil is capable of infiltrating stormwater. A description of how an infiltration test is performed is found in Appendix C of the PA BMP Manual.
- It is recommended that there be a 2-foot clearance above the regularly occurring seasonal high water table and a minimum depth to bedrock of 2 feet.
- The infiltration trench should be at least 50 feet from individual water supply wells, 100 feet from community or municipal water supply wells, and 50 feet from any septic system component. It should not be located near hotspots (see definition in Section B.2).
- The infiltration trench should be located so that it presents no threat to sub-surface structures such as building foundations and basements.
- Protect infiltration areas from compaction.
- The ratio of the collected area to the footprint of the facility should be as small as possible with a ratio of less than 5:1 preferred.

Figure B-4: Typical Infiltration Trench

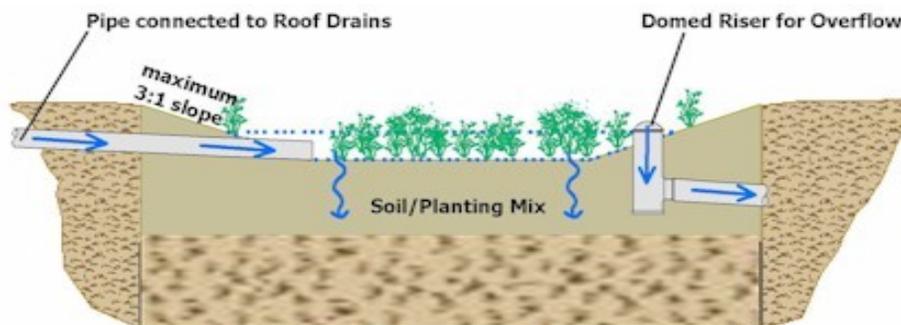

Source: Pennsylvania Stormwater BMP Manual (2006)

Rain Garden/Bioretention Area

A rain garden (bioretention area) is an excavated depression area on the surface of the land in which native vegetation is planted to filter and use stormwater runoff. Runoff ponds on top of the surface of the rain garden and then infiltrates into an enhanced soil below the surface where plants can use the water to grow. Bioretention also improves water quality, vegetation filters the water, and the root systems encourage or promote infiltration. Figure B-5 shows a typical rain garden. Key elements of a rain garden include:

- Ponding depths of **1 foot** or less (recommended).
- Native vegetation that can tolerate dry and wet weather.
- An overflow area where, if the bioretention area were to overflow, the water would flow over pervious area (i.e., grass, meadow), and would not cause harm to property, or;
- An overflow such as a domed riser to allow excess flow from large storms to travel to other substantial infiltration areas or pervious areas.
- Typical side slopes of 3:1 are recommended, with 2:1 being the maximum.
- The soil/planting mix depth should be between 1.5 feet and 6 feet deep.

Figure B-5: Typical Rain Garden/Bioretention Area

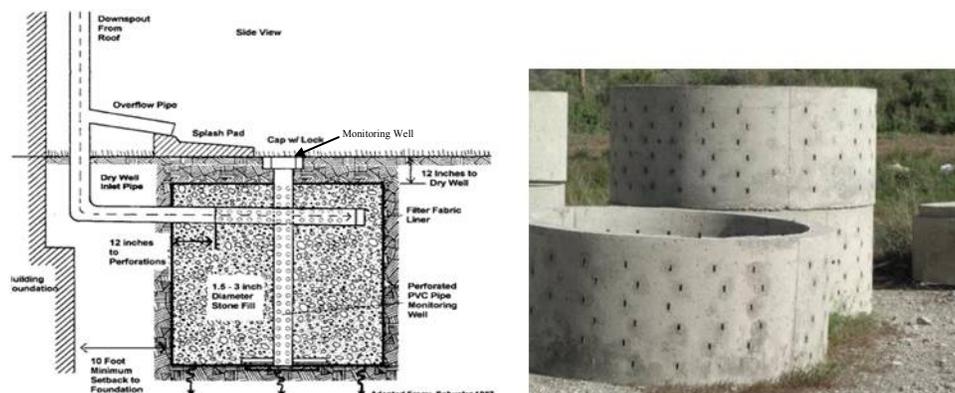

Source: Pennsylvania Stormwater BMP Manual (2006)

Dry Wells

A dry well, also referred to as a seepage pit is a subsurface storage facility that temporarily stores and infiltrates runoff from the roofs of buildings or other impervious surfaces. A dry well can be either a structural prefabricated chamber (Dry Well #1) or an excavated pit filled with stone fill (Dry Well #2). Dry wells discharge the stored runoff via infiltration into the surrounding or underlying soils. Figure B-6 shows a typical prefabricated dry well and a typical dry well configuration with stone fill. The following elements shall be incorporated into all dry well designs:

- These facilities should be located a minimum of ten (10) feet from the building foundation to avoid foundation seepage problems and are not recommended if their installation would create a risk for basement flooding.
- Construction of a dry well should be performed after surface soils in all other areas of the site are stabilized to avoid clogging.
- During construction, compaction of the subgrade soil in the bottom of the dry well should be avoided, and construction should be performed only with light machinery.
- Depth of a dry well should be between **1.5 feet and 4 feet**. Gravel fill should consist of stone of an average of one and one half to three (1.5 – 3.0) inches in diameter with the gravel fill wrapped in a nonwoven geotextile that separates the stone fill from the surrounding soil.
- At least 1 foot of soil needs to be placed over the top of the dry well.
- Dry wells should be inspected at least four (4) times annually as well as after large storm events.
- Dry wells should have overflow pipes to allow high volumes of runoff to connect to other on-site substantial infiltration areas or pervious areas.
- Every dry well needs to have at least one monitoring well.
- Infiltration testing is recommended to ensure that the underlying soil is capable of infiltrating the needed volume of stormwater.

B.4 Example

Simplified Approach Volume Determination:

Joe Homeowner wants to build a 400 square foot two car garage, and a 540 square foot (30' L x 18' W) impervious driveway that is graded so that the stormwater runoff drains to the grassy area along one edge of the driveway. (A duplicate of Table B-1 is provided below in Table B-5, a duplicate of Table B-3 is provided below in Table B-6 and outlines the steps of this example) a duplicate of Figure B-1 (Figure B-7) and a duplicate of Table B-4 are provided in Table B-7.

STEP 1 - Determine the total area of all proposed impervious surfaces to drain to each BMP:

Garage Roof (Front)	10 ft. x 20 ft.	=	200 sq. ft.
Garage Roof (Rear)	10 ft. x 20 ft.	=	200 sq. ft.
Driveway (Front)	30 ft. x 18 ft.	=	540 sq. ft.

Total Proposed Impervious Surface			940 sq. ft.

Note: If the driveway used pervious pavement (i.e., paving blocks), then the total impervious area would only be 400 square feet, and no stormwater management practices would need to control runoff from the driveway.

Select a BMP or combination of BMPs from Section B.3 to be used to satisfy the volume requirement. Determine the length, width, depth and other requirements for the BMPs in Section B.3. A BMP needs to be placed to catch runoff from the back of the garage, and a BMP needs to be placed to capture runoff from the front of the garage and the driveway. Figure B-7 shows the direction the runoff flows and the locations where the BMPs are to be placed.

Joe Homeowner would like to use a rain barrel (BMP #1) to capture the runoff from the rear of the garage and an infiltration trench (BMP #2) to capture runoff from the front of the garage and the driveway.

STEP 2 and 3 for BMP #1 (Rain Barrel/Cistern)

STEP 2 - Select the proposed impervious area value for BMP #1, the rain barrel or cistern, in Column 1 that is closest to, but not less than 200 in Table B-5:

The value in Column 1 that is closest to but is not less than 200 is 200.

STEP 3 - Determine the volume that BMP #1 must be to satisfy the volume requirements using Columns 2 and 3 in Table B-5:

The volume in gallons of the rain barrel/cistern to be used as BMP #1, assuming the rain barrel/cistern is 25% full, is determined by finding the row in Column 3 that corresponds to the impervious area value determined in Step 1. Therefore, the volume of BMP #1, the rain barrel/cistern must be ≥ 166 gallons. A combination of rain barrels could be used in succession as shown in Figure B-2, or a cistern could be used.

Table B-5: Example – Calculating Storage Volume for Rain Barrel/Cistern

Column 1	Column 2	Column 3	
Proposed Impervious Area (square feet)	Volume of Rain Barrel/Cistern ¹ (cubic feet)	Volume of Rain Barrel/Cistern (gallons)	
<i>I</i>	V_{RBcf}	V_{RBgal}	
Sum of all Proposed Impervious Areas	$(1*(1/12)*I)/0.75=V_{RBcf}$	$V_{RBcf} * 7.48=V_{RBgal}$	
50	6	42	↑
100	11	83	Rain Barrel
150	17	125	↓
2 200	22	3 166	↓
250	28	208	↑
300	33	249	
350	39	291	
400	44	332	
450	50	374	
500	56	416	
550	61	457	
600	67	499	Cistern
650	72	540	
700	78	582	
750	83	623	
800	89	665	
850	94	706	
900	100	748	
950	106	790	↓
999	111	830	↓

¹Assume that the rain barrel/cistern is 25% full

STEPS 2 through 4 for BMP #2 (Infiltration Trench)

STEP 2 - Select the proposed impervious area value for BMP #2, the infiltration trench, using Column 1 in Table B-6:

Find the row in Column 1 that is closest to but not less than 740 (200 from the front of the garage + 540 from the driveway). Therefore, the value selected is 750.

STEP 3 - Determine the volume that BMP #2, the infiltration trench must be to satisfy the volume requirements using Column 2 in Table B-6:

The volume of the infiltration trench to be used as BMP #2, assuming a void ratio of 40%, is determined by finding the row in Column 2 that is in the same row as 750 square feet from Step 2. Therefore, the volume of BMP #2 must be 156 cubic feet.

STEP 4 - Utilizing the value from Column 2 determined above, and the surface area that the proposed BMP will occupy, identify the proposed depth and corresponding surface area needed using Column 3 in Table B-6:

Joe Homeowner would like to place the infiltration trench along the edge of the driveway that the runoff drains to, so it would have a length of 20 feet. The smallest width that can be used, as stated in the infiltration trench requirements in Section B.3, is 3 feet. Therefore, the area of the infiltration trench is:

$$20 * 3 = 60 \text{ square feet}$$

To find the minimum depth of the trench, move toward the right side of the table from 156 cubic feet in Column 2 to Column 3, and find the column with a value of as close to but not more than 60 square feet, which is 52 square feet. Then obtain the minimum depth of the facility by reading the depth from the column heading at the top of the table. Therefore, the depth of the trench would need to be 3 feet.

Selected BMPs: Rain barrel(s) \geq 166 gallons and a 20' L x 3' W x 3' D infiltration trench

STEP 5 – Make a sketch of the site plan as shown in Figure B-7, and fill in the simplified method worksheet found as shown in Table B-7.

Table B-6: Example – Calculating Storage Volume Surface Area and Depth for Infiltration Trench

Column 1	Column 2	Column 3							
Total Proposed Impervious Area (square feet)	Volume of Infiltration Trench or Dry Well #2* (cubic feet)	Surface Area of Infiltration Trench or Dry Well #2 (square feet)							
		Acceptable Depths for Each BMP are indicated by the arrows below							
		Area Required for a BMP with a Depth(D) of 1.5'	Area Required for a BMP with a Depth(D) of 2.0'	Area Required for a BMP with a Depth(D) of 2.5'	Area Required for a BMP with a Depth(D) of 3.0'	Area Required for a BMP with a Depth(D) of 3.5'	Area Required for a BMP with a Depth(D) of 4.0'	Area Required for a BMP with a Depth(D) of 4.5'	Area Required for a BMP with a Depth(D) of 5.0'
<i>I</i>	<i>V</i>	<i>A(sf)</i>							
Sum of all Proposed Impervious Areas	$(1*(1/12)*I)/\text{Void Ratio } (0.4)*=V$	$V/D=A$							
50	10	7	5	4	3	3	3	2	2

B.5 Simplified Operation, Inspection, and Maintenance Plan

It is the property owner's responsibility to properly maintain BMPs. It is also the property owner's responsibility to inform any future buyers of the function, operation, and maintenance needed for any BMPs on the property prior to the purchase of the property. The following maintenance agreement outlines the maintenance required for each type of BMP, the responsibilities of the property owner, and the rights of the Municipality in regards to inspection and enforcement of the maintenance requirements. The Operation and Maintenance Agreement must be signed and submitted to the Municipality.

STORMWATER BEST MANAGEMENT PRACTICES OPERATIONS, MAINTENANCE, AND INSPECTION AGREEMENT

THIS AGREEMENT, made and entered into this _____ day of _____, 200__, by and between _____, (hereinafter the "Landowner"), and _____, _____ (County, Township, or Borough) Pennsylvania, (hereinafter "Municipality");

WITNESSETH

WHEREAS, the Landowner is the owner of certain real property as recorded by deed in the land records of _____ County, Pennsylvania, Deed Book _____ at Page _____, (hereinafter "Property"); and,

WHEREAS, the Landowner _____ recognizes that the stormwater management best management practices or BMPs (hereinafter referred to as "the BMP" or "BMPs") must be maintained for the development called, _____, located at _____ (address of property where BMP is located); and,

WHEREAS, the Municipality and the Landowner, its administrators, executors, successors, heirs, or assigns, agree that the health, safety, and welfare of the residents of the Municipality and the protection and maintenance of water quality require that on-site stormwater Best Management Practices be constructed and maintained on the property; and,

WHEREAS, the Landowner is required to inform future buyers of the property about the function of, operation, and maintenance requirements of the BMP or BMPs prior to the purchase of the property by said future buyer, and upon purchase of the property the future buyer assumes all responsibilities as Landowner and must comply with all components of this agreement.

WHEREAS, for the purposes of this agreement, the following definition shall apply:

- BMP – “Best Management Practice;” activities, facilities, designs, measures, or procedures used to manage stormwater impacts from land development, to protect and maintain water quality and groundwater recharge, and to otherwise meet the purposes of the Municipal Stormwater Management Ordinance, including, but not limited to, infiltration trenches, dry wells, bioretention, rain gardens, permeable paving, rain barrels, and cisterns.

WHEREAS, it is required that the BMP or BMPs as shown on the simple sketch plan further referred to as the “Plan” and in accordance with the sizing calculations found on the simplified method worksheet further referred to as the “Calculation Worksheet” be constructed and maintained by the Landowner, its administrators, executors, successors, heirs, or assigns.

WHEREAS, the Municipality requires that stormwater management BMPs be constructed and adequately operated and maintained by the Landowner, its administrators, executors, successors, heirs, or assigns, in accordance with the following maintenance requirements.

- Vegetation along the surface of an infiltration trench should be maintained in good condition, and any bare spots should be revegetated as soon as possible.

- Vehicles shouldn't be parked or driven on an infiltration trench, and care should be taken to avoid excessive compaction by mowers.
- Any debris such as leaves blocking flow from reaching an infiltration trench or bioretention/rain garden should be routinely removed.
- While vegetation is being established, pruning and weeding may be required for a bioretention/rain garden.
- Mulch in a bioretention/rain garden needs to be re-spread when erosion is evident. Once every two to three years or after major storms the entire area may require mulch replacement.
- At least twice a year the landowner needs to inspect the bioretention/rain garden for sediment buildup and vegetative conditions.
- During periods of extended drought, the bioretention/rain garden requires watering.
- Trees and shrubs in a bioretention/rain garden need to be inspected at least twice per year by the landowner to evaluate their health. If they are in poor health, they need to be replaced.
- Dry wells need to be inspected by the landowner at least four times a year and after significant rainfalls, and debris/trash, sediment, and any other waste material need to be removed and disposed of at suitable disposal/recycling sites and in compliance with local, state, and federal waste regulations.
- For dry wells, gutters need to be regularly cleaned out, and proper connections must be maintained to facilitate the effectiveness of the dry well.
- The filter screen for the dry well that intercepts roof runoff must be replaced as necessary.
- Dry wells that are damaged need to be fixed or replaced within two weeks of being damaged.
- If an intermediate sump box exists in conjunction with a dry well, it must be cleaned out at least once per year.
- Rain barrels and cisterns need to be cleared of debris routinely at least every three months and after significant storms to allow stormwater from gutters to enter them.

- Gutters that directly convey rain water to dry wells, rain barrels, and cisterns need to be routinely cleared of trash and debris at least every three months and after significant storms.
- Rain barrels and cisterns must be kept covered.
- Rain barrels and cisterns should be routinely emptied so that they are only ¼ of the way full to allow for storage of additional rainwater.
- Overflow outlets from rain barrels and cisterns must be kept free and clear of debris.
- Rain barrels and cisterns that are damaged need to be fixed or replaced within two weeks of being damaged.

NOW, THEREFORE, in consideration of the foregoing promises, the mutual covenants contained herein, and the following terms and conditions, the parties hereto agree as follows:

1. The BMPs shall be constructed by the Landowner in accordance with specifications identified in the Plan and Calculation Worksheet.
2. The Landowner shall operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality and in accordance with the specific maintenance requirements outlined in this agreement.
3. The Landowner hereby grants permission to the Municipality, its authorized agents, and employees to enter upon the property at reasonable times and upon presentation of proper identification, to inspect the BMP(s) whenever it deems necessary. Whenever possible, the Municipality shall notify the Landowner prior to entering the property.
4. In the event that the Landowner fails to operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality, the Municipality or its representatives may enter upon the property and take whatever action is deemed necessary to maintain said BMP(s). This provision shall not be construed to allow the Municipality to erect any permanent structure on the land of the Landowner. It is expressly understood and agreed that the Municipality is under no obligation to maintain or repair said facilities, and in no event shall this Agreement be construed to impose any such obligation on the Municipality.

5. In the event that the Municipality, pursuant to this Agreement, performs work of any nature, or expends any funds in performance of said work for labor, use of equipment, supplies, materials, and the like, the Landowner shall reimburse the Municipality for all expenses (direct and indirect) incurred within ten days of receipt of an invoice from the Municipality.
6. The intent and purpose of this Agreement is to ensure the proper maintenance of the on-site BMP(s) by the Landowner; provided, however, that this Agreement shall not be deemed to create or affect any additional liability of any party for damage alleged to result from or be caused by stormwater runoff.
7. The Landowner, its executors, administrators, assigns, heirs, and other successors in interests, shall release the Municipality's employees and designated representatives from all damages, accidents, casualties, occurrences, or claims which might arise or be asserted against said employees and representatives from the construction, presence, existence, or maintenance of the BMP(s) by the Landowner or Municipality. In the event that a claim is asserted against the Municipality, its designated representatives, or employees, the Municipality shall promptly notify the Landowner and the Landowner shall defend, at his own expense, any suit based on the claim. If any judgment or claims against the Municipality's employees or designated representatives shall be allowed, the Landowner shall pay all costs and expenses regarding said judgment or claim.

This Agreement shall be recorded at the Office of the Recorder of Deeds of _____ County, Pennsylvania, and shall constitute a covenant running with the Property and/or equitable servitude, and shall be binding on the Landowner, his administrators, executors, assigns, heirs, and any other successors in interests, in perpetuity.

ORDINANCE APPENDIX D

STORMWATER CONTROLS AND BEST MANAGEMENT
PRACTICES
OPERATIONS AND MAINTENANCE AGREEMENT

**STORMWATER CONTROLS AND BEST MANAGEMENT PRACTICES
OPERATIONS AND MAINTENANCE AGREEMENT**

THIS AGREEMENT, made and entered into this _____ day of _____, 20____, by and between _____, (hereinafter the “Landowner”), and _____ County, Pennsylvania, (hereinafter “Municipality”);

WITNESSETH

WHEREAS, the Landowner is the owner of certain real property as recorded by deed in the land records of _____ County, Pennsylvania, Deed Book _____ at Page _____, (hereinafter “Property”).

WHEREAS, the Landowner is proceeding to build and develop the Property; and

WHEREAS, the Stormwater Controls and BMP Operations and Maintenance Plan approved by the Municipality (hereinafter referred to as the “Plan”) for the Property identified herein, which is attached hereto as Appendix A and made part hereof, provides for management of stormwater within the confines of the Property through the use of Best Management Practices (BMPs); and

WHEREAS, the Municipality and the Landowner, his successors, and assigns agree that the health, safety, and welfare of the residents of the Municipality and the protection and maintenance of water quality require that on-site stormwater BMPs be constructed and maintained on the Property; and

WHEREAS, for the purposes of this agreement, the following definitions shall apply:

BMP – “Best Management Practice”-activities, facilities, designs, measures, or procedures used to manage stormwater impacts from land development, to protect and maintain water quality and infiltration, and to otherwise meet the purposes of the municipal Stormwater Management Ordinance, including but not limited to infiltration trenches, seepage pits, filter strips, bioretention, wet ponds, permeable paving, rain gardens, grassed swales, forested buffers, sand filters, and detention basins.

- Infiltration Trench – A BMP surface structure designed, constructed, and maintained for the purpose of providing infiltration or recharge of stormwater into the soil and/or groundwater aquifer,
- Seepage Pit – An underground BMP structure designed, constructed, and maintained for the purpose of providing infiltration or recharge of stormwater into the soil and/or groundwater aquifer,
- Rain Garden – A BMP overlain with appropriate mulch and suitable vegetation designed, constructed, and maintained for the purpose of providing infiltration or recharge of stormwater into the soil and/or underground aquifer, and

WHEREAS, the Municipality requires, through the implementation of the Plan, that stormwater management BMPs as required by said Plan and the municipal Stormwater Management Ordinance be constructed and adequately operated and maintained by the Landowner, his successors, and assigns.

NOW, THEREFORE, in consideration of the foregoing promises, the mutual covenants contained herein, and the following terms and conditions, the parties hereto agree as follows:

1. The BMPs shall be constructed by the Landowner in accordance with the plans and specifications identified in the Plan.
2. The Landowner shall operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality and in accordance with the specific maintenance requirements noted on the Plan.
3. The Landowner hereby grants permission to the Municipality, its authorized agents, and employees to enter upon the property, at reasonable times and upon presentation of proper identification, to inspect the BMP(s) whenever it deems necessary. Whenever possible, the Municipality shall notify the Landowner prior to entering the Property.
4. In the event that the Landowner fails to operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality, the Municipality or its representatives may enter upon the Property and take whatever action is deemed necessary to maintain said BMP(s). This provision shall not be construed to allow the Municipality to erect any permanent structure on the land of the Landowner. It is expressly understood and agreed that the Municipality is under no obligation to maintain or repair said facilities, and in no event shall this Agreement be construed to impose any such obligation on the Municipality.
5. In the event that the Municipality, pursuant to this Agreement, performs work of any nature or expends any funds in performance of said work for labor, use of equipment, supplies, materials, and the like, the Landowner shall reimburse the Municipality for all expenses (direct and indirect) incurred within ten (10) days of receipt of an invoice from the Municipality.
6. The intent and purpose of this Agreement is to ensure the proper maintenance of the on-site BMP(s) by the Landowner; provided, however, that this Agreement shall not be deemed to create or affect any additional liability on any party for damage alleged to result from or be caused by stormwater runoff.
7. The Landowner, its executors, administrators, assigns, and other successors in interest shall release the Municipality's employees and designated representatives from all damages, accidents, casualties, occurrences, or claims which might arise or be asserted against said employees and representatives from the construction, presence, existence, or maintenance of the BMP(s) by the Landowner or Municipality. In the event that a claim is asserted against the Municipality, its designated representatives, or employees, the Municipality shall

promptly notify the Landowner, and the Landowner shall defend, at his own expense, any suit based on the claim. If any judgment or claims against the Municipality's employees or designated representatives shall be allowed, the Landowner shall pay all costs and expenses regarding said judgment or claim.

- 8. The Municipality shall inspect the BMP(s) at a minimum of once every two (2) years to ensure their continued functioning.

This Agreement shall be recorded at the Office of the Recorder of Deeds of _____ County, Pennsylvania, and shall constitute a covenant running with the Property and/or equitable servitude and shall be binding on the Landowner, his administrators, executors, assigns, heirs, and any other successors in interest, in perpetuity.

ORDINANCE APPENDIX E

RIPARIAN BUFFER TRAIL GUIDELINES

Riparian Buffer Trail Guidelines

Introduction

Riparian buffers are used as non-structural best management practices (BMPs) for protecting and enhancing water quality. Depending on their size, location, and design, riparian buffers often supply additional environmental, economic, aesthetic, and recreational value. Passive recreational trails can be a compatible use within riparian buffers if the trails are sized and placed appropriately. The trail guidelines below are meant to supplement Section 257-17, Water Quality Requirements, and do not alter or modify the regulations set forth in Section 257-12, General Requirements. All other applicable rules and requirements should be followed, including all federal, state, permitting, and local stormwater and floodplain ordinances.

Installing a trail does not relieve a developer or municipality of the minimum buffer and vegetation requirements described in Section 257-17-C, or infiltration and peak rate controls in Sections 257-16 and 257-17. Effort shall be made to mitigate water quality and peak rate adjacent the trail structure to avoid collecting runoff in a large facility and creating a point discharge. This can be accomplished by trail-side stone filtration trenches, vegetative filter strips, small bio-retention facilities, and other mechanisms subject to site constraints and municipal engineer approval. See Figure J-1. In situations where site constraints negate the feasibility of trail-side mitigation methods, effort shall be made to collect runoff in multiple stormwater facilities for segmented portions of the trail, in place of detaining stormwater in one large facility. Level spreaders shall be constructed at facility outlets to decrease point-source discharges.

As with all trails, adequate land acquisition, easements, and/or landowner permission should be obtained in advance of any trail placement. Care should be given when designing and installing trails so as not to compromise the buffer's ability to protect water quality. Many factors such as slope, vegetation, and soil type will determine the type, size, and placement of the trail within the riparian buffer. Heavily used trails and trails with wide impervious surfaces should be set back farther from the stream edge to help mitigate the effects of any associated increase in runoff. Note: failure to comply with these guidelines (Installing a trail with inadequate setback from the stream bank) could result in increased stormwater runoff, decreased water quality, stream bank degradation, and damage to the buffer or trail.

Trail Recommendations

Location, Size, and Orientation

All trails should be a reasonable width appropriate for the site conditions. It is not recommended that the width of any paved trail exceed twenty five (25) percent of the total buffer width. All trail designs and specifications are subject to approval by the municipality.

Natural vegetation must be present throughout the buffer as described in Section 306 of the ordinance. Grassy areas should be managed as meadows or be reforested and should not be mowed as lawn in any part of the buffer. Where existing vegetation is insufficient to protect water quality, additional native species should be planted to enhance the buffer.

Paved trails, if appropriate to the site, are permitted and must be located at least twenty-five (25) feet from the top of the stream bank. In limited instances, paved trails be placed closer to a stream due to topography, or in order to accommodate passive educational and recreational activities, but must always be at least ten (10) feet from the top of the stream bank. Although this can be achieved by diverting the entire trail closer to the stream, more conservative methods should be considered, such as smaller spur trails or loop trails. These smaller trails provide access to the stream, but reduce the total traffic along the sensitive stream bank.

In rare instances where the buffer width is reduced due to zoning setback or geographical constraints, the municipality should strongly consider whether the benefits of a trail outweigh the benefits of a wider buffer.

Signage

The installation of interpretive and educational signage is strongly encouraged along the trail. Signs should point out local natural resources and educate the public on how riparian buffers protect the watershed. There should be minimum disturbance in the vegetated buffer between the trail and the stream. Therefore, all appurtenances (e.g. benches, educational signs, kiosks, fountains, etc.) should be installed on the landward side of the trail, if possible. All appurtenances shall be installed in compliance with federal, state, local, stormwater, floodplain, and other regulations and permitting requirements (e.g. anchoring, etc.)

Parking Areas

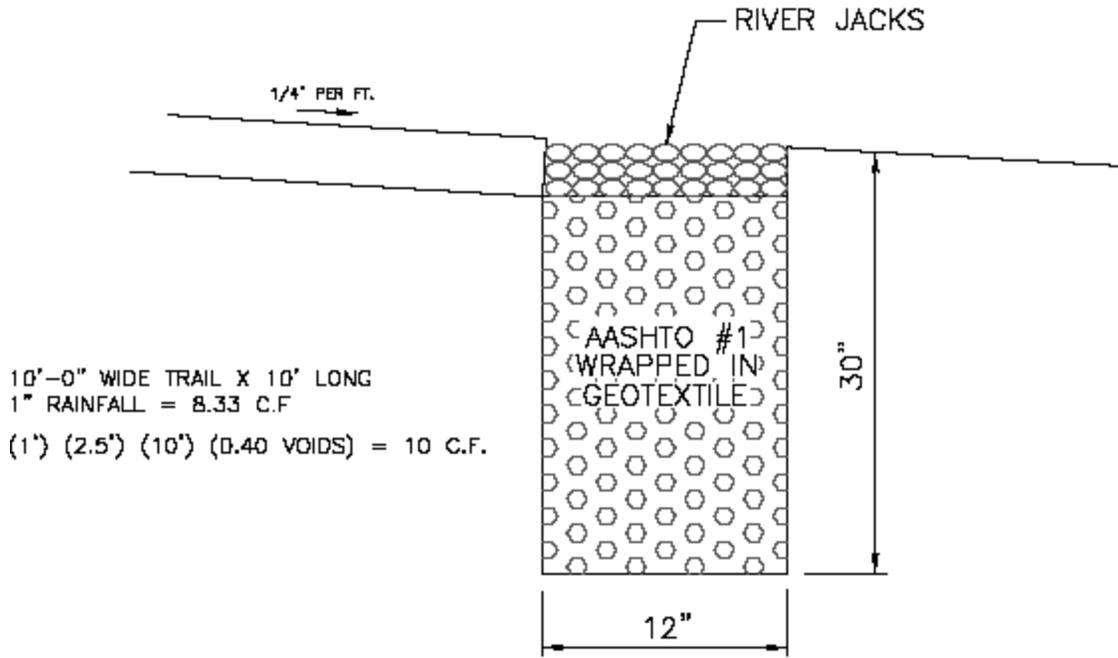

New trailheads and trail parking areas shall meet all the infiltration, rate control, and minimum setback requirements of this ordinance. Every effort should be made to coordinate trail access with existing parking areas. Any new parking areas and trailhead clearings should not encroach on the riparian buffer in any way.

Trail Maintenance

The installation and maintenance of all trails should be performed in a manner that minimizes site disturbance and prevents runoff and erosion. Soil disturbance should be avoided if possible. The removal of native trees and other native vegetation should also be kept to a minimum. If large or heavy equipment is required for trail installation, special care should be given not to damage existing trees and tree roots.

ORDINANCE APPENDIX F

LOW IMPACT DEVELOPMENT (LID) PRACTICES

LOW IMPACT DEVELOPMENT (LID) PRACTICES

ALTERNATIVE APPROACH FOR MANAGING STORMWATER RUNOFF

Natural hydrologic conditions can be altered radically by poorly planned development practices such as introducing unnecessary impervious surfaces, destroying existing drainage swales, constructing unnecessary storm sewers, and changing local topography. A traditional drainage approach of development has been to remove runoff from a site as quickly as possible and capture it in a detention basin. This approach leads ultimately to the degradation of water quality as well as expenditure of additional resources for detaining and managing concentrated runoff at some downstream location.

The recommended alternative approach is to promote practices that will minimize proposed conditions runoff rates and volumes, which will minimize needs for artificial conveyance and storage facilities. To simulate pre-development hydrologic conditions, infiltration is often necessary to offset the loss of infiltration by creation of impervious surfaces. The ability of the ground to infiltrate depends upon the soil types and its conditions.

Preserving natural hydrologic conditions requires careful alternative site design considerations. Site design practices include preserving natural drainage features, minimizing impervious surface area, reducing the hydraulic connectivity of impervious surfaces, and protecting natural depression storage. A well-designed site will contain a mix of all of those features. The following describes various techniques to achieve the alternative approach:

- **Preserving Natural Drainage Features.** Protecting natural drainage features, particularly vegetated drainage swales and channels, is desirable because of their ability to infiltrate and attenuate flows and to filter pollutants. However, this objective is often not accomplished in land development. In fact, commonly held drainage philosophy encourages just the opposite pattern – streets and adjacent storm sewers are typically located in the natural headwater valleys and swales, thereby replacing natural drainage functions with a completely impervious system. As a result, runoff and pollutants generated from impervious surfaces flow directly into storm sewers with no opportunity for attenuation, infiltration, or filtration. Developments designed to fit site topography also minimize the amount of grading on site.
- **Protecting Natural Depression Storage Areas.** Depressional storage areas either have no surface outlet or drain very slowly following a storm event. They can be commonly seen as ponded areas in farm fields during the wet season or after large runoff events. Traditional development practices eliminate these depressions by filling or draining, thereby obliterating their ability to reduce surface runoff volumes and trap pollutants. The volume and release rate characteristics of depressions should be protected in the design of the development site. The depressions can be protected by simply avoiding the depression or by incorporating its storage as additional capacity in required detention facilities.

- **Avoiding Introduction of Impervious Areas.** Careful site planning should consider reducing impervious coverage to the maximum extent possible. Building footprints, sidewalks, driveways, and other features producing impervious surfaces should be evaluated to minimize impacts on runoff.
- **Reducing the Hydraulic Connectivity of Impervious Surfaces.** Impervious surfaces are significantly less of a problem if they are not directly connected to an impervious conveyance system (such as a storm sewer). Two basic ways to reduce hydraulic connectivity are routing of roof runoff over lawns and reducing the use of storm sewers. Site grading should promote increasing travel time of stormwater runoff and should help reduce concentration of runoff to a single point in the development.
- **Routing Roof Runoff Over Lawns.** Roof runoff can be easily routed over lawns in most site designs. The practice discourages direct connection of downspouts to storm sewers or parking lots. The practice also discourages sloping driveways and parking lots to the street. By routing roof drains and crowning the driveway to run off to the lawn, the lawn is essentially used as a filter strip.
- **Reducing the Use of Storm Sewers.** By reducing use of storm sewers for draining streets, parking lots, and back yards, the potential for accelerating runoff from the development can be greatly reduced. The practice requires greater use of swales and may not be practical for some development sites, especially if there are concerns for areas that do not drain in a “reasonable” time. The practice requires educating local citizens and public works officials who expect runoff to disappear shortly after a rainfall event.
- **Reducing Street Widths.** Street widths can be reduced by either eliminating on-street parking or by reducing roadway widths. Municipal planners and traffic designers should encourage narrower neighborhood streets which ultimately could lower maintenance.
- **Limiting Sidewalks to One Side of the Street.** A sidewalk on one side of the street may suffice in low-traffic neighborhoods. The lost sidewalk could be replaced with bicycle/recreational trails that follow back-of-lot lines. Where appropriate, backyard trails should be constructed using pervious materials.
- **Using Permeable Paving Materials.** These materials include permeable interlocking concrete paving blocks or porous bituminous concrete. Such materials should be considered as alternatives to conventional pavement surfaces, especially for low use surfaces such as driveways, overflow parking lots, and emergency access roads.
- **Reducing Building Setbacks.** Reducing building setbacks reduces impervious cover associated with driveway and entry walks and is most readily accomplished along low-traffic streets where traffic noise is not a problem.
- **Constructing Cluster Developments.** Cluster developments can also reduce the amount of impervious area for a given number of lots. The biggest savings occurs with street length, which also will reduce costs of the development. Cluster development groups the

construction activity in less-sensitive areas without substantially affecting the gross density of development.

In summary, a careful consideration of the existing topography and implementation of a combination of the above mentioned techniques may avoid construction of costly stormwater control measures. Benefits include reduced potential for downstream flooding and water quality degradation of receiving streams/water bodies, enhancement of aesthetics, and reduction of development costs. Other benefits include more stable baseflows in receiving streams, improved infiltration, reduced flood flows, reduced pollutant loads, and reduced costs for conveyance and storage.

WEST NILE VIRUS GUIDANCE

WEST NILE VIRUS GUIDANCE

(This source is from the Monroe County, PA Conservation District that researched the potential of West Nile Virus problems from BMPs due to a number of calls they were receiving)

Monroe County Conservation District Guidance: Stormwater Management and West Nile Virus

Source: Brodhead McMichaels Creeks Watershed Act 167 Stormwater Management Ordinance Final Draft 2/23/04

The Monroe County Conservation District recognizes the need to address the problem of nonpoint source pollution impacts caused by runoff from impervious surfaces. The new stormwater policy being integrated into Act 167 stormwater management regulations by the PA Department of Environmental Protection (PADEP) will make nonpoint pollution controls an important component of all future plans and updates to existing plans. In addition, to meet post-construction anti-degradation standards under the state National Pollutant Discharge Elimination System (NPDES) permitting program, applicants will be required to employ Best Management Practices (BMPs) to address nonpoint pollution concerns.

Studies conducted throughout the United States have shown that wet basins and in particular constructed wetlands are effective in traditional stormwater management areas such as channel stability and flood control and are one of the most effective ways to remove stormwater pollutants (United States Environmental Protection Agency 1991, Center for Watershed Protection 2000). From Maryland to Oregon, studies have shown that as urbanization and impervious surfaces increase in a watershed, the streams in those watersheds become degraded (CWP 2000). Although there is debate over the threshold of impervious cover when degradation becomes apparent (some studies show as little as 6% while others show closer to 20%), there is agreement that impervious surfaces cause nonpoint pollution in urban and urbanizing watersheds and that degradation is ensured if stormwater BMPs are not implemented.

Although constructed wetlands and ponds are desirable from a water quality perspective, there may be concerns about the possibility of these stormwater management structures becoming breeding grounds for mosquitoes. The Conservation District feels that although it may be a valid concern, **municipalities should not adopt ordinance provisions prohibiting wet basins for stormwater management.**

Mosquitoes

The questions surrounding mosquito production in wetlands and ponds have intensified in recent years by the outbreak of the mosquito-borne West Nile Virus. As is the case with all vector-borne maladies, the life cycle of West Nile Virus is complicated, traveling from mosquito to bird, back to mosquito, and then to other animals including humans. *Culex pipiens* was identified as the vector species in the first documented cases from New York in 1999. This species is still considered the primary transmitter of the disease across its range. Today there are some 60 species of mosquitoes that inhabit Pennsylvania. Along with *C. pipiens*, three other

species have been identified as vectors of West Nile Virus while four more have been identified as potential vectors.

The four known vectors in NE Pennsylvania are *Culex pipiens*, *C. restuans*, *C. salinarius*, and *Ochlerotatus japonicus*. All four of these species prefer, and almost exclusively use, artificial containers (old tires, rain gutters, birdbaths, etc.) as larval habitats. In the case of *C. pipiens*, the most notorious of the vector mosquitoes, the dirtier the water, the better they like it. The important factor is that these species do not thrive in functioning wetlands where competition for resources and predation by larger aquatic and terrestrial organisms is high.

The remaining four species, *Aedes vexans*, *Ochlerotatus Canadensis*, *O. triseriatus*, and *O. trivittatus*, are currently considered potential vectors due to laboratory tests (except the *O. trivittatus*, which did have one confirmed vector pool for West Nile Virus in PA during 2002). All four of these species prefer vernal habitats and ponded woodland areas following heavy summer rains. These species may be the greatest threat of disease transmission around stormwater basins that pond water for more than four days. This can be mitigated, however, by establishing ecologically functioning wetlands.

Stormwater Facilities

If a stormwater wetland or pond is constructed properly and a diverse ecological community develops, mosquitoes should not become a problem. Wet basins and wetlands constructed as stormwater management facilities should be designed to attract a diverse wildlife community. If a wetland is planned, proper hydrologic soil conditions and the establishment of hydrophytic vegetation will promote the population of the wetland by amphibians and other mosquito predators. In natural wetlands, predatory insects and amphibians are effective at keeping mosquito populations in check during the larval stage of development while birds and bats prey on adult mosquitoes.

The design of a stormwater wetland must include the selection of hydrophytic plant species for their pollutant uptake capabilities and for not contributing to the potential for vector mosquito breeding. In particular, species of emergent vegetation with little submerged growth are preferable. By limiting the vegetation growing below the water surface, larvae lose protective cover, and there is less chance of anaerobic conditions occurring in the water.

Stormwater ponds can be designed for multiple purposes. When incorporated into an open space design, a pond can serve as a stormwater management facility and a community amenity. Aeration fountains and stocked fish should be added to keep larval mosquito populations in check.

Publications from the PA Department of Health and the Penn State Cooperative Extension concerning West Nile Virus identify aggressive public education about the risks posed by standing water in artificial containers (tires, trash cans, rain gutters, bird baths) as the most effective method to control vector mosquitoes.

Conclusion

The Conservation District understands the pressure faced by municipalities when dealing with multifaceted issues such as stormwater management and encourages the incorporation of water quality management techniques into stormwater designs. As Monroe County continues to grow, conservation design, infiltration, and constructed wetlands and ponds should be among the preferred design options to reduce the impacts of increases in impervious surfaces. When designed and constructed appropriately, the runoff mitigation benefits to the community from these design options will far outweigh their potential to become breeding grounds for mosquitoes.

LOW IMPACT DEVELOPMENT (LID) PRACTICES

ALTERNATIVE APPROACH FOR MANAGING STORMWATER RUNOFF

Natural hydrologic conditions can be altered radically by poorly planned development practices such as introducing unnecessary impervious surfaces, destroying existing drainage swales, constructing unnecessary storm sewers, and changing local topography. A traditional drainage approach of development has been to remove runoff from a site as quickly as possible and capture it in a detention basin. This approach leads ultimately to the degradation of water quality as well as expenditure of additional resources for detaining and managing concentrated runoff at some downstream location.

The recommended alternative approach is to promote practices that will minimize proposed conditions' runoff rates and volumes, which will minimize needs for artificial conveyance and storage facilities. To simulate predevelopment hydrologic conditions, infiltration is often necessary to offset the loss of infiltration by creation of impervious surfaces. The ability of the ground to infiltrate depends upon the soil types and its conditions.

Preserving natural hydrologic conditions requires careful alternative site design considerations. Site design practices include preserving natural drainage features, minimizing impervious surface area, reducing the hydraulic connectivity of impervious surfaces, and protecting natural depression storage. A well-designed site will contain a mix of all of those features. The following describes various techniques to achieve the alternative approach:

- **Preserving Natural Drainage Features.** Protecting natural drainage features, particularly vegetated drainage swales and channels, is desirable because of their ability to infiltrate and attenuate flows and to filter pollutants. However, this objective is often not accomplished in land development. In fact, commonly held drainage philosophy encourages just the opposite pattern; streets and adjacent storm sewers are typically located in the natural headwater valleys and swales, thereby replacing natural drainage functions with a completely impervious system. As a result, runoff and pollutants generated from impervious surfaces flow directly into storm sewers with no opportunity for attenuation, infiltration, or filtration. Developments designed to fit site topography also minimize the amount of grading on site.
- **Protecting Natural Depression Storage Areas.** Depressional storage areas either have no surface outlet or drain very slowly following a storm event. They can be commonly seen as ponded areas in farm fields during the wet season or after large runoff events. Traditional development practices eliminate these depressions by filling or draining, thereby obliterating their ability to reduce surface runoff volumes and trap pollutants. The volume and release rate characteristics of depressions should be protected in the design of the development site. The depressions can be protected by simply avoiding the depression or by incorporating its storage as additional capacity in required detention facilities.

HAVERFORD CODE

- **Avoiding Introduction of Impervious Areas.** Careful site planning should consider reducing impervious coverage to the maximum extent possible. Building footprints, sidewalks, driveways, and other features producing impervious surfaces should be evaluated to minimize impacts on runoff.
- **Reducing the Hydraulic Connectivity of Impervious Surfaces.** Impervious surfaces are significantly less of a problem if they are not directly connected to an impervious conveyance system (such as a storm sewer). Two basic ways to reduce hydraulic connectivity are routing of roof runoff over lawns and reducing the use of storm sewers. Site grading should promote increasing travel time of stormwater runoff and should help reduce concentration of runoff to a single point in the development.
- **Routing Roof Runoff Over Lawns.** Roof runoff can be easily routed over lawns in most site designs. The practice discourages direct connection of downspouts to storm sewers or parking lots. The practice also discourages sloping driveways and parking lots to the street. By routing roof drains and crowning the driveway to run off to the lawn, the lawn is essentially used as a filter strip.
- **Reducing the Use of Storm Sewers.** By reducing use of storm sewers for draining streets, parking lots, and back yards, the potential for accelerating runoff from the development can be greatly reduced. The practice requires greater use of swales and may not be practical for some development sites, especially if there are concerns for areas that do not drain in a “reasonable” time. The practice requires educating local citizens and public works officials who expect runoff to disappear shortly after a rainfall event.
- **Reducing Street Widths.** Narrower neighborhood streets could reduce impervious and lower maintenance.
- **Limiting Sidewalks to One Side of the Street.** A sidewalk on one side of the street may suffice in low-traffic neighborhoods. The lost sidewalk could be replaced with bicycle/recreational trails that follow back-of-lot lines. Where appropriate, backyard trails should be constructed using pervious materials.
- **Using Permeable Paving Materials.** These materials include permeable interlocking concrete paving blocks or porous bituminous concrete. Such materials should be considered as alternatives to conventional pavement surfaces, especially for low use surfaces such as driveways, overflow parking lots, and emergency access roads.
- **Reducing Building Setbacks.** Reducing building setbacks reduces impervious cover associated with driveway and entry walks and is most readily accomplished along low-traffic streets where traffic noise is not a problem.
- **Constructing Cluster Developments.** Cluster developments can also reduce the amount of impervious area for a given number of lots. The biggest savings occur with street length, which also will reduce costs of the development. Cluster development

EROSION AND SEDIMENT CONTROL; STORMWATER MANAGEMENT

groups the construction activity in less-sensitive areas without substantially affecting the gross density of development.

In summary, a careful consideration of the existing topography and implementation of a combination of the above-mentioned techniques may avoid construction of costly stormwater control measures. Benefits include reduced potential for downstream flooding and water quality degradation of receiving streams/water bodies, enhancement of aesthetics, and reduction of development costs. Other benefits include more stable baseflows in receiving streams, improved groundwater recharge, reduced flood flows, reduced pollutant loads, and reduced costs for conveyance and storage.

**ALTERNATING BLOCK METHOD FOR
RAINFALL DISTRIBUTION**

The Alternating Block Method can be utilized to develop design hydrographs from the PennDOT Storm Intensity Duration Frequency (PDT IDF) curves. This method redistributes the incremental rainfall values developed from the PDT IDF curves in a quasi symmetrical form, where the block of maximum incremental depth is positioned at the middle of the required duration and the remaining blocks of rainfall are arranged in descending order, alternately to the right and to the left of the central block. Example F-1 below shows this method for a one hundred-year, two-hour duration storm with ten-minute time intervals.

Notes

Values from Column (2) are derived from the appropriate rainfall chart based on the location of the site under analysis. (Region 5, in this example; therefore, use Figure F-4)

Column (3) = Column (2) x Column (1) / 60 minutes (i.e., 6.91 inches / hr x 10 min / 60 = 1.15).

Column (4) = Difference in Column(3) for each time interval (i.e., 1.78 — 1.15 = 0.63).

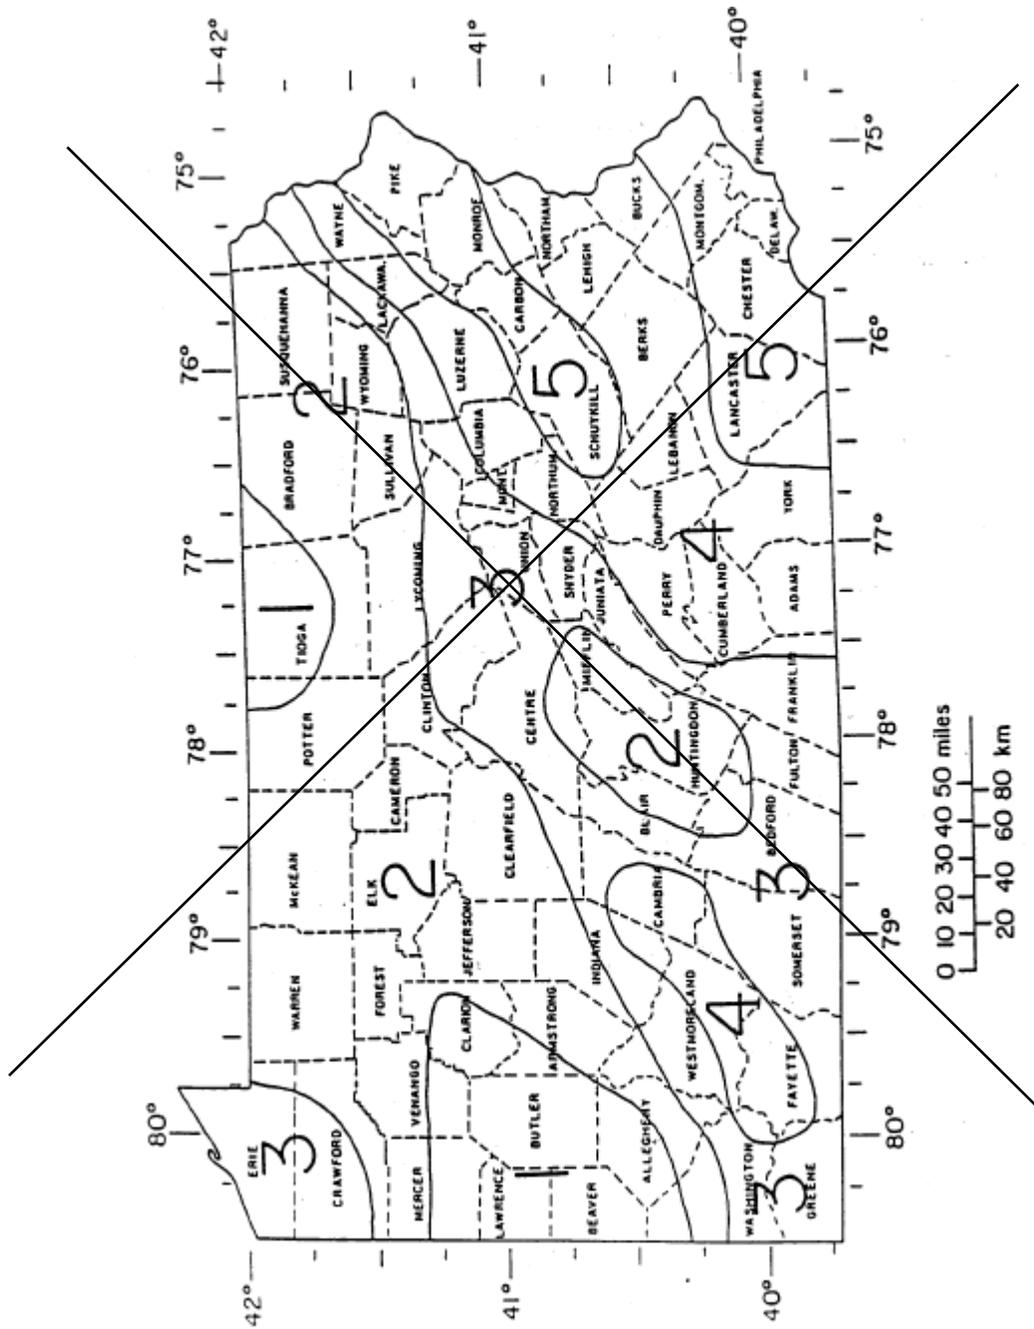

EROSION AND SEDIMENT CONTROL; STORMWATER MANAGEMENT

Column (5) is Column (4) rearranged with the maximum increment from Column (4) placed at the middle of the event (time = 60 minutes, in this example), then rearranging the remaining values from Column (4) in descending order, alternately right and left (below and above) the central block.

TABLE F-54

NONSTRUCTURAL STORMWATER MANAGEMENT MEASURES

Nonstructural Stormwater Measure	Description
Natural area conservation	Conservation of natural areas such as forest, wetlands, or other sensitive areas in a protected easement, thereby retaining their existing hydrologic and water quality characteristics.
Disconnection of rooftop runoff	Rooftop runoff is disconnected and then directed over a pervious area where it may either infiltrate into the soil or filter over it. This is typically obtained by grading the site to promote overland flow or by providing bioretention on single-family residential lots.
Disconnection of nonrooftop runoff	Disconnect surface impervious cover by directing it to pervious areas where it is either infiltrated or filtered through the soil.
Buffers	Buffers effectively treat stormwater runoff. Effective treatment constitutes capturing runoff from pervious and impervious areas adjacent to the buffer and treating the runoff through overland flow across a grassy or forested area.
Grass channel (open section roads)	Open grass channels are used to reduce the volume of runoff and pollutants during smaller storms.
Environmentally sensitive rural development	Environmental site design techniques are applied to low-density or rural residential development.

ORDINANCE APPENDIX G
WEST NILE VIRUS GUIDANCE

WEST NILE VIRUS GUIDANCE

(This source is from the Monroe County, PA Conservation District that researched the potential of West Nile Virus problems from BMPs due to a number of calls they were receiving)

Monroe County Conservation District Guidance: Stormwater Management and West Nile Virus

Source: Brodhead McMichaels Creeks Watershed Act 167 Stormwater Management Ordinance Final Draft 2/23/04

The Monroe County Conservation District recognizes the need to address the problem of nonpoint source pollution impacts caused by runoff from impervious surfaces. The new stormwater policy being integrated into Act 167 stormwater management regulations by the PA Department of Environmental Protection (PADEP) will make nonpoint pollution controls an important component of all future plans and updates to existing plans. In addition, to meet post-construction anti-degradation standards under the state National Pollutant Discharge Elimination System (NPDES) permitting program, applicants will be required to employ Best Management Practices (BMPs) to address nonpoint pollution concerns.

Studies conducted throughout the United States have shown that wet basins and in particular constructed wetlands are effective in traditional stormwater management areas such as channel stability and flood control and are one of the most effective ways to remove stormwater pollutants (United States Environmental Protection Agency 1991, Center for Watershed Protection 2000). From Maryland to Oregon, studies have shown that as urbanization and impervious surfaces increase in a watershed, the streams in those watersheds become degraded (CWP 2000). Although there is debate over the threshold of impervious cover when degradation becomes apparent (some studies show as little as 6% while others show closer to 20%), there is agreement that impervious surfaces cause nonpoint pollution in urban and urbanizing watersheds and that degradation is ensured if stormwater BMPs are not implemented.

Although constructed wetlands and ponds are desirable from a water quality perspective, there may be concerns about the possibility of these stormwater management structures becoming breeding grounds for mosquitoes. The Conservation District feels that although it may be a valid concern, **municipalities should not adopt ordinance provisions prohibiting wet basins for stormwater management.**

Mosquitoes

The questions surrounding mosquito production in wetlands and ponds have intensified in recent years by the outbreak of the mosquito-borne West Nile Virus. As is the case with all vector-borne maladies, the life cycle of West Nile Virus is complicated, traveling from mosquito to bird, back to mosquito, and then to other animals including humans. *Culex pipiens* was identified as the vector species in the first documented cases from New York in 1999. This species is still considered the primary transmitter of the disease across its range. Today there are some 60 species of mosquitoes that inhabit Pennsylvania. Along with *C. pipiens*, three other

species have been identified as vectors of West Nile Virus while four more have been identified as potential vectors.

The four known vectors in NE Pennsylvania are *Culex pipiens*, *C. restuans*, *C. salinarius*, and *Ochlerotatus japonicus*. All four of these species prefer, and almost exclusively use, artificial containers (old tires, rain gutters, birdbaths, etc.) as larval habitats. In the case of *C. pipiens*, the most notorious of the vector mosquitoes, the dirtier the water, the better they like it. The important factor is that these species do not thrive in functioning wetlands where competition for resources and predation by larger aquatic and terrestrial organisms is high.

The remaining four species, *Aedes vexans*, *Ochlerotatus Canadensis*, *O. triseriatus*, and *O. trivittatus*, are currently considered potential vectors due to laboratory tests (except the *O. trivittatus*, which did have one confirmed vector pool for West Nile Virus in PA during 2002). All four of these species prefer vernal habitats and ponded woodland areas following heavy summer rains. These species may be the greatest threat of disease transmission around stormwater basins that pond water for more than four days. This can be mitigated, however, by establishing ecologically functioning wetlands.

Stormwater Facilities

If a stormwater wetland or pond is constructed properly and a diverse ecological community develops, mosquitoes should not become a problem. Wet basins and wetlands constructed as stormwater management facilities should be designed to attract a diverse wildlife community. If a wetland is planned, proper hydrologic soil conditions and the establishment of hydrophytic vegetation will promote the population of the wetland by amphibians and other mosquito predators. In natural wetlands, predatory insects and amphibians are effective at keeping mosquito populations in check during the larval stage of development while birds and bats prey on adult mosquitoes.

The design of a stormwater wetland must include the selection of hydrophytic plant species for their pollutant uptake capabilities and for not contributing to the potential for vector mosquito breeding. In particular, species of emergent vegetation with little submerged growth are preferable. By limiting the vegetation growing below the water surface, larvae lose protective cover, and there is less chance of anaerobic conditions occurring in the water.

Stormwater ponds can be designed for multiple purposes. When incorporated into an open space design, a pond can serve as a stormwater management facility and a community amenity. Aeration fountains and stocked fish should be added to keep larval mosquito populations in check.

Publications from the PA Department of Health and the Penn State Cooperative Extension concerning West Nile Virus identify aggressive public education about the risks posed by standing water in artificial containers (tires, trash cans, rain gutters, bird baths) as the most effective method to control vector mosquitoes.

Conclusion

The Conservation District understands the pressure faced by municipalities when dealing with multifaceted issues such as stormwater management and encourages the incorporation of water quality management techniques into stormwater designs. As Monroe County continues to grow, conservation design, infiltration, and constructed wetlands and ponds should be among the preferred design options to reduce the impacts of increases in impervious surfaces. When designed and constructed appropriately, the runoff mitigation benefits to the community from these design options will far outweigh their potential to become breeding grounds for mosquitoes.

EROSION AND SEDIMENT CONTROL; STORMWATER MANAGEMENT

78 Attachment 9

Township of Haverford

Appendix I

**STORMWATER CONTROLS AND BEST MANAGEMENT
PRACTICES OPERATION AND MAINTENANCE AGREEMENT**

THIS AGREEMENT, made and entered into this _____ day of _____, 200__, by and between _____, (hereinafter the "Landowner"), and _____, _____ County, Pennsylvania, (hereinafter "Municipality");

WITNESSETH

WHEREAS, the Landowner is the owner of certain real property as recorded by deed in the land records of _____ County, Pennsylvania, Deed Book _____ at Page _____, (hereinafter "Property").

WHEREAS, the Landowner is proceeding to build and develop the Property; and

WHEREAS, the Stormwater Controls and BMP Operation and Maintenance Plan approved by the Municipality (hereinafter referred to as the "Plan") for the property identified herein, which is attached hereto as Appendix A and made part hereof, provides for management of stormwater within the confines of the Property through the use of Best Management Practices (BMPs); and

WHEREAS, the Municipality and the Landowner, his successors, and assigns agree that the health, safety, and welfare of the residents of the Municipality and the protection and maintenance of water quality require that on-site stormwater BMPs be constructed and maintained on the Property; and

WHEREAS, for the purposes of this agreement, the following definitions shall apply:

BMP – "Best Management Practice"-activities, facilities, designs, measures, or procedures used to manage stormwater impacts from land development, to protect and maintain water quality and groundwater recharge, and to otherwise meet the purposes of the municipal Stormwater Management Ordinance, including but not limited to infiltration trenches, seepage pits, filter strips, bioretention, wet ponds, permeable paving, rain gardens, grassed swales, forested buffers, sand filters, and detention basins.

- Infiltration Trench – A BMP surface structure designed, constructed, and maintained for the purpose of providing infiltration or recharge of stormwater into the soil and/or groundwater aquifer,
- Seepage Pit – An underground BMP structure designed, constructed, and maintained for the purpose of providing infiltration or recharge of stormwater into the soil and/or groundwater aquifer,

HAVERFORD CODE

- Rain Garden — A BMP overlain with appropriate mulch and suitable vegetation designed, constructed, and maintained for the purpose of providing infiltration or recharge of stormwater into the soil and/or underground aquifer, and

WHEREAS, the Municipality requires, through the implementation of the Plan, that stormwater management BMPs as required by said Plan and the municipal Stormwater Management Ordinance be constructed and adequately operated and maintained by the Landowner, his successors, and assigns.

NOW, THEREFORE, in consideration of the foregoing premises, the mutual covenants contained herein, and the following terms and conditions, the parties hereto agree as follows:

1. The BMPs shall be constructed by the Landowner in accordance with the plans and specifications identified in the Plan.
2. The Landowner shall operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality and in accordance with the specific maintenance requirements noted on the Plan.
3. The Landowner hereby grants permission to the Municipality, its authorized agents, and employees to enter upon the property, at reasonable times and upon presentation of proper identification, to inspect the BMP(s) whenever it deems necessary. Whenever possible, the Municipality shall notify the Landowner prior to entering the property.
4. In the event that the Landowner fails to operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality, the Municipality or its representatives may enter upon the Property and take whatever action is deemed necessary to maintain said BMP(s). This provision shall not be construed to allow the Municipality to erect any permanent structure on the land of the Landowner. It is expressly understood and agreed that the Municipality is under no obligation to maintain or repair said facilities, and in no event shall this Agreement be construed to impose any such obligation on the Municipality.
5. In the event that the Municipality, pursuant to this Agreement, performs work of any nature or expends any funds in performance of said work for labor, use of equipment, supplies, materials, and the like, the Landowner shall reimburse the Municipality for all expenses (direct and indirect) incurred within 10 days of receipt of an invoice from the Municipality.
6. The intent and purpose of this Agreement is to ensure the proper maintenance of the on-site BMP(s) by the Landowner, provided, however, that this Agreement shall not be deemed to create or effect any additional liability on any party for damage alleged to result from or be caused by stormwater runoff.
7. The Landowner, its executors, administrators, assigns, and other successors in interest shall release the Municipality's employees and designated representatives from all damages, accidents, casualties, occurrences, or claims which might arise or be asserted against said employees and representatives from the construction, presence, existence, or maintenance of the BMP(s) by the Landowner or Municipality. In the event that a claim is asserted against the Municipality, its designated representatives, or employees, the Municipality shall promptly notify the Landowner, and the Landowner shall defend, at his own expense, any suit based on the claim. If any judgment or claims against the Municipality's employees or designated representatives shall be allowed, the Landowner shall pay all costs and expenses regarding said judgment or claim.

EROSION AND SEDIMENT CONTROL; STORMWATER MANAGEMENT

- 8. The Municipality shall inspect the BMP(s) at a minimum of once every three years to ensure their continued functioning.

This Agreement shall be recorded at the Office of the Recorder of Deeds of _____ County, Pennsylvania, and shall constitute a covenant running with the Property and/or equitable servitude and shall be binding on the Landowner, his administrators, executors, assigns, heirs, and any other successors in interest, in perpetuity.

Riparian Buffer Trail Guidelines

Introduction

Riparian buffers are used as non-structural best management practices (BMPs) for protecting and enhancing water quality. Depending on their size, location, and design, riparian buffers often supply additional environmental, economic, aesthetic, and recreational value. Passive recreational trails can be a compatible use within riparian buffers if the trails are sized and placed appropriately. The trail guidelines below are meant to supplement Section §78-37, Water Quality Requirements, and do not alter or modify the regulations set forth in Section §78-25, General Requirements. All other applicable rules and requirements should be followed, including all federal, state, permitting, and local stormwater and floodplain ordinances.

Installing a trail does not relieve a developer or municipality of the minimum buffer and vegetation requirements described in §78-42, or infiltration and peak rate controls in Sections §78-36 and §78-39. Effort shall be made to mitigate water quality and peak rate adjacent the trail structure to avoid collecting runoff in a large facility and creating a point discharge. This can be accomplished by trail-side stone filtration trenches, vegetative filter strips, small bio-retention facilities, and other mechanisms subject to site constraints and municipal engineer approval. See Figure J-1. In situations where site constraints negate the feasibility of trail-side mitigation methods, effort shall be made to collect runoff in multiple stormwater facilities for segmented portions of the trail, in place of detaining stormwater in one large facility. Level spreaders shall be constructed at facility outlets to decrease point-source discharges.

As with all trails, adequate land acquisition, easements, and/or landowner permission should be obtained in advance of any trail placement. Care should be given when designing and installing trails so as not to compromise the buffer's ability to protect water quality. Many factors such as slope, vegetation, and soil type will determine the type, size, and placement of the trail within the riparian buffer. Heavily used trails and trails with wide impervious surfaces should be set back farther from the stream edge to help mitigate the effects of any associated increase in runoff. Note: failure to comply with these guidelines (Installing a trail with inadequate setback from the stream bank) could result in increased stormwater runoff, decreased water quality, stream bank degradation, and damage to the buffer or trail.

Trail Recommendations

Location, Size, and Orientation

All trails should be a reasonable width appropriate for the site conditions. It is not recommended that the width of any paved trail exceed twenty five (25) percent of the total buffer width. All trail designs and specifications are subject to approval by the municipality.

Natural vegetation must be present throughout the buffer as described in Section 306 of the ordinance. Grassy areas should be managed as meadows or be reforested and should not be mowed as lawn in any part of the buffer. Where existing vegetation is insufficient to protect water quality, additional native species should be planted to enhance the buffer.

Paved trails, if appropriate to the site, are permitted and must be located at least twenty-five (25) feet from the top of the stream bank. In limited instances, paved trails be placed closer to a stream due to topography, or in order to accommodate passive educational and recreational activities, but must always be at least ten (10) feet from the top of the stream bank. Although this can be achieved by diverting the entire trail closer to the stream, more conservative methods should be considered, such as smaller spur trails or loop trails. These smaller trails provide access to the stream, but reduce the total traffic along the sensitive stream bank.

In rare instances where the buffer width is reduced due to zoning setback or geographical constraints, the municipality should strongly consider whether the benefits of a trail outweigh the benefits of a wider buffer.

Signage

The installation of interpretive and educational signage is strongly encouraged along the trail. Signs should point out local natural resources and educate the public on how riparian buffers protect the watershed. There should be minimum disturbance in the vegetated buffer between the trail and the stream. Therefore, all appurtenances (e.g. benches, educational signs, kiosks, fountains, etc.) should be installed on the landward side of the trail, if possible. All appurtenances shall be installed in compliance with federal, state, local, stormwater, floodplain, and other regulations and permitting requirements (e.g. anchoring, etc.)

Parking Areas

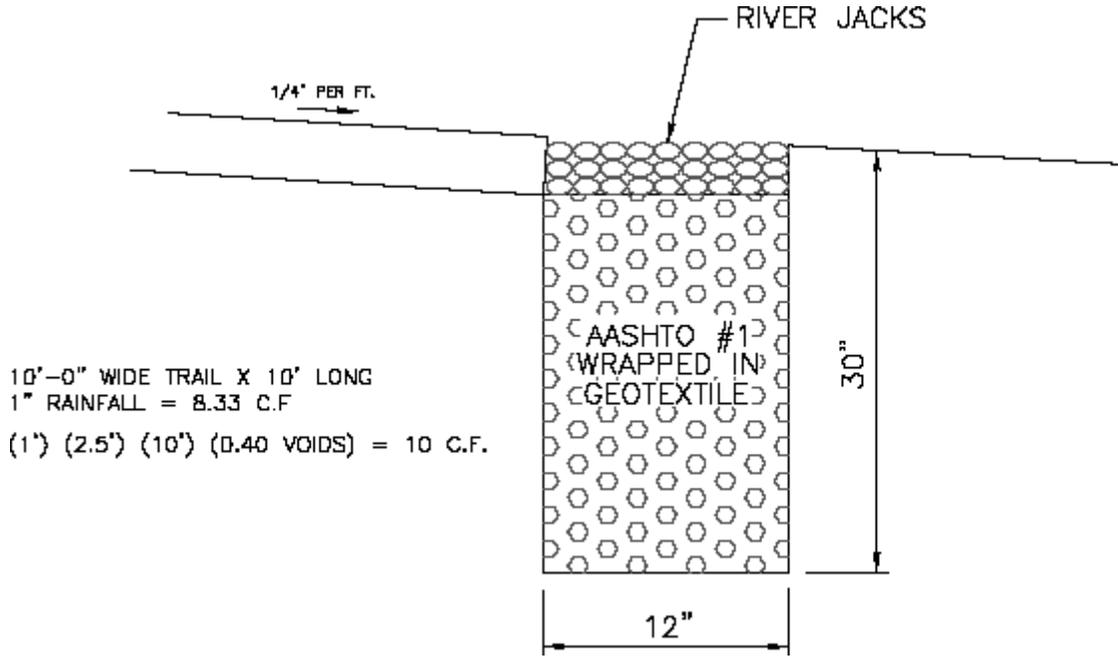

New trailheads and trail parking areas shall meet all the infiltration, rate control, and minimum setback requirements of this ordinance. Every effort should be made to coordinate trail access with existing parking areas. Any new parking areas and trailhead clearings should not encroach on the riparian buffer in any way.

Trail Maintenance

The installation and maintenance of all trails should be performed in a manner that minimizes site disturbance and prevents runoff and erosion. Soil disturbance should be avoided if possible. The removal of native trees and other native vegetation should also be kept to a minimum. If large or heavy equipment is required for trail installation, special care should be given not to damage existing trees and tree roots.

ARTICLE I
Erosion and Sediment Control
 [Adopted 2-12-1973 by Ord. No. 1505]

§ 78-1. Short title.

This chapter shall be known and may be cited as the "Township of Haverford Erosion and Sediment Control Ordinance."

§ 78-2. Purpose and Scope.

A. The purpose of this chapter is to regulate the modification of the natural terrain, the alteration of drainage, the maintenance of artificial structures and surfaces and to provide for certain erosion and sediment control measures within the Township of Haverford so as to assure and safeguard health, safety, ecology and general welfare in the Township of Haverford.

A.B. Scope of provisions. New grading, excavations and fills or changes, additions, repairs or alterations made to existing excavations and fills shall conform to the provisions of this chapter, except that this chapter shall not apply to work performed by the Township in a public street or on public property.

§ 78-3. Erosion and sediment control plans required; ~~no-fee permits~~exceptions.

A. A grading permit will not be required in the following situation, but in all other respects the provisions of this chapter shall apply:

B. An excavation which does not exceed three feet in vertical depth at its deepest point measured from the natural ground surface nor cover an area of more than 200 square feet. This exception shall not affect the applicability of this chapter nor the requirement of a grading permit for any fill or grading made with the material from such excavation.

~~A.~~ ~~Whenever the landscape or vegetation is to be disturbed, a plan showing how erosion and sediment shall be controlled is required.~~

~~B.~~ ~~As a minimum, a plan for the following will be required in all situations:~~

~~(1)~~ ~~The amount of site alteration proposed.~~

~~(2)~~ ~~Construction timing or sequence.~~

~~(3)~~ ~~Erosion and sediment control practices, both temporary and permanent.~~

~~(4)~~ ~~Operation and maintenance arrangements for the practices.~~

~~C.~~ ~~Whenever the landscape or vegetation is to be disturbed and the proposal involves an area less than 1/2 an acre, a no-fee permit shall be required.~~

§ 78-4. Permit required.

A. It shall be unlawful for any person, firm or corporation to pave, fill, strip, grade or regrade any land within the Township of Haverford without first securing a permit as hereunder provided, except as otherwise stated in 78-3.

B. It shall be unlawful for any person, firm or corporation to disturb, modify, block, divert or affect the

natural overland or subsurface flow of stormwater within the Township of Haverford without first securing a permit as hereunder provided.

- C. It shall be unlawful for any person, firm or corporation to construct, erect or install any drainage dam, ditch, culvert, drainpipe, bridge or any other structure or obstruction affecting the drainage of any premises in the Township of Haverford without first securing a permit as hereunder provided.

§ 78-5. ~~Application for permit; fees.~~ Permit Application.

A. Any person, firm or corporation proposing to engage in an activity requiring a permit hereunder shall apply for a permit by written application on a form furnished by the Township of Haverford.

~~A.~~ _____

~~B.~~ ~~Proof of application for permit shall be submitted to the Township of Haverford Planning Commission simultaneously with preliminary plans to be considered for subdivision/development review.¹~~

~~C.~~ ~~The developer is encouraged to consult the general development plans and detailed plans of any unit of government that affect the tract to be developed and the area surrounding it before he submits a preliminary plan for review. He should also become acquainted with the Zoning Ordinance and other ordinances which regulate the development of land in the Township of Haverford.²~~

D.B. A separate application shall be required for each grading permit. ~~Three copies~~ Two hard copies and one digital copy of the proposed plan, including specifications and timing schedules, shall be submitted with each application for a permit. ~~One of the copies, at the discretion of the Director of Code Enforcement, shall be submitted to the Delaware County Conservation District for comment and review.~~ [Amended 6-30-1986 by Ord. No. 1960]

E.C. Applications for review required under this chapter shall be accompanied by a review fee as fixed by resolution of the Board of Commissioners, which may be amended from time to time. [Amended 2-8-1993 by Ord. No. 2168]

F.D. All applications for a permit involving an area of disturbance greater than ~~one acre~~ 500 square feet shall be accompanied by a ~~bond or~~ escrow deposit, to the benefit of the Township of Haverford in an amount as provided by Township resolution. ~~The form of the bond or escrow account shall first be approved by the Township Solicitor, which shall guarantee the full and complete compliance with this chapter.~~ [Amended 2-8-1993 by Ord. No. 2168]

§ 78-6. Submission of property plan; information required.

The application for a permit shall be accompanied by a plan of the property showing:

A. A boundary line survey of the site on which the work is to be performed, showing the existing and proposed contours of the land and the proposed contours after completion of proposed grading.

B. A description of the features, existing and proposed, surrounding the site which are of importance to the proposed development, including the nature of fill material and trees to be removed as a result of the proposed construction.

~~C.~~ ~~A description of the general topographic and soil conditions, including drainage, on the site available through the Delaware County Conservation District.~~ Description of the type and classification of the soil.

~~D.~~ Details and location of any proposed drainage structures and pipes.

~~E.~~ The lowest floor elevation of any proposed building based upon North American Vertical Datum of 1988 and the elevation of the one-hundred-year flood.

D.F. The location and description of existing and future manmade features of importance to the proposed development, i.e., cuts and fills, buildings, roads, etc.

E.G. Plans and specifications of soil erosion and sediment control measures in accordance with standards and specifications of the Delaware County Conservation District or the Township of Haverford.

F.H. A time schedule indicating the anticipated starting and completion dates of the development sequence and the time of exposure of each area prior to the completion of effective erosion and sediment control measures.

I. All plans and specifications accompanying applications for permits shall include provisions for both interim (temporary) and ultimate (permanent) erosion and sediment control.

(1) The design, installation and maintenance of erosion and sediment control measures shall be accomplished in accordance with standards and specifications established by the Delaware County Conservation District as adapted from standards and specifications of the Soil Conservation Service, United States Department of Agriculture.

(2) Technical standards for the design and installation of erosion and sediment control measures are on file with the Township of Haverford office, the office of the Delaware, County Conservation District and other governmental agency offices.

(3) Standards and specifications adopted for the purposes of this chapter and by the Delaware County Conservation District include but are not limited to the following basic conservation measures:

(a) Temporary cover on critical areas.

(b) Permanent grass and cover on critical areas on prepared seedbed.

(c) Permanent grass and cover on critical areas on unprepared seedbed.

(d) Sodding.

(e) Mulching.

(f) Temporary diversion.

(g) Permanent diversion.

(h) Grassed waterway or outlet.

(i) Grade stabilization structure.

(j) Debris basin.

(k) Drain.

(l) Drainage, main or lateral.

§ 78-7. Submission of drainage study; contents; disposal of stormwater runoff; soils investigation report. [Amended 2-15-2005 by Ord. No. 2439]

A. Stormwater management plans shall be as required in this chapter.

(1) The application for a permit shall be accompanied by a plan of the property showing the location of all present and proposed ditches, streams, pipes and other drainage structures and proposed cuts and fills. In addition to showing present elevations and dimensions and location and extent of all proposed grading and/or drainage, the plan shall clearly indicate all buildings, parking areas and driveways. Further, the plan shall indicate the present and proposed sources, storage

and disposition of water being channeled through or across the premises, together with elevations, gradients and maximum flow rates. The application shall describe the work to be performed, the materials to be used and the manner or method of performance, including provisions for protecting and maintaining existing drainage facilities whether on public or private property. The applicant shall supply data supporting the plan developed by a registered professional civil engineer or an engineer qualified in hydrology.

(2) Stormwater management plans shall be prepared in accordance with this chapter.

B. The following provisions apply to the carrying and disposal of stormwater runoff:

(1) The applicant shall agree to the granting and recording of easements for drainage facilities, including acceptance of the discharge of water on the property of others, provisions for maintenance of slopes and swales and access for the maintenance of anti-erosion facilities.

C. If load-bearing fill is proposed, a soils investigation report shall be submitted, which shall consist of test borings, laboratory testings and engineering analysis to correlate surface and subsurface conditions with the proposed grading plan. The results of the investigation shall be presented in a report by a registered professional soils engineer or geologist, which shall include data regarding the nature, distribution and supporting ability of existing soils and rocks on the site, conclusions and recommendations to ensure stable soil conditions and groundwater control, as applicable. The Township of Haverford may require such supplemental reports and data as it deems necessary. Recommendations included in such reports and approved by the Township of Haverford shall be incorporated in the plan or specifications.

(1) Fills toeing out on natural slopes steeper than four horizontal to one vertical shall not be made unless approved by the Township of Haverford after receipt of a report, deemed acceptable by the Township of Haverford Engineer, by a registered professional soils engineer certifying that he has investigated the property, made soil tests and that, in his opinion, such steeper slopes will safely support the proposed fill.

(2) Natural and/or existing slopes exceeding five horizontal to one vertical shall be benched or continuously stepped into competent materials prior to placing all classes of fill.

§ 78-8. Issuance of permit. [Amended 6-30-1986 by Ord. No. 1960]

Upon the submission of an application which conforms to the provisions of this chapter, the Director of Code Enforcement or their designee, after consultation with the Township of Haverford Engineer, shall issue the necessary permit.

§ 78-9. Performance standards.

A. Notwithstanding any provision of this chapter or any condition of the permit, the permittee is responsible for the prevention of damage to other property or personal injury which may be affected by the activity requiring a permit.

B. No person, firm or corporation shall modify, fill, excavate, pave, grade or regrade land in any manner so close to a property line as to endanger or damage any adjoining street, sidewalk, alley or any other public or private property without supporting and protecting such property from settling, cracking, erosion, sediment or other physical damage or personal injury which might result.

C. No person, firm or corporation shall deposit or place any debris or any other material whatsoever or to cause such to be thrown or placed in any drainage ditch or drainage structure in such a manner as to obstruct free flow.

D. No person, firm or corporation shall fail to adequately maintain in good operating order any drainage facility on his premises. All drainage ditches, culverts, drainpipes and drainage structures shall be kept

open and free-flowing at all times.

- E. The owner of any property on which any work has been done pursuant to a permit granted under this chapter shall continuously maintain and repair all graded surfaces and antierosion devices, retaining walls, drainage structures or means and other protective devices, plantings and ground cover installed or completed.
- F. All graded surfaces shall be seeded, sodded and/or planted or otherwise protected from erosion within 60 days and shall be watered, tended and/or maintained until growth, in the case of vegetation, is well established. The disturbed area and duration of exposure shall be kept to a practical minimum.
- G. All trees in the area of extreme grade change shall be removed unless protected with suitable tree wells. However, extreme precautions shall be taken to prevent the unnecessary removal of trees.
- H. When required, adequate provisions shall be made for dust control measures as are deemed acceptable by the Township of Haverford.

~~I. All plans and specifications accompanying applications for permits shall include provisions for both interim (temporary) and ultimate (permanent) erosion and sediment control.~~

~~(1) The design, installation and maintenance of erosion and sediment control measures shall be accomplished in accordance with standards and specifications established by the Delaware County Conservation District as adapted from standards and specifications of the Soil Conservation Service, United States Department of Agriculture.~~

~~(2) Technical standards for the design and installation of erosion and sediment control measures are on file with the Township of Haverford office, the office of the Delaware County Conservation District and other governmental agency offices.~~

~~(3) Standards and specifications adopted for the purposes of this chapter and by the Delaware County Conservation District include but are not limited to the following basic conservation measures:~~

~~(a) Temporary cover on critical areas.~~

~~(b) Permanent grass and legume cover on critical areas on prepared seedbed.~~

~~(c) Permanent grass and legume cover on critical areas on unprepared seedbed.~~

~~(d) Sodding.~~

~~(e) Mulching.~~

~~(f) Temporary diversion.~~

~~(g) Permanent diversion.~~

~~(h) Grassed waterway or outlet.~~

~~(i) Grade stabilization structure.~~

~~(j) Debris basin.~~

~~(k) Drain.~~

~~(l) Drainage, main or lateral.~~

J.I. A quality control program is critical for fills, therefore, whenever fill material is to be used, each layer of compacted fill should be tested to determine its dry density as per ASTM D 1556. The density of each layer should not be less than 95% of maximum dry density as determined by ASTM D 1557.

- (1) Inspection procedure shall follow the general procedure as stated in § 78-10.
- (2) Compaction test reports shall be kept on file at the site and shall be subject to review at all times.
- (3) The degree of compaction required shall be determined by the Township of Haverford Engineer following the guidelines in Subsection J above.
- (4) Where the provisions of Subsection J are determined to be inapplicable, they may be waived by the Township of Haverford Engineer.

§ 78-10. Inspections; availability and inspection of as-built plans; issuance of occupancy permit.

A. The Township Engineer shall, when requested by the Director of Code Enforcement or their designee, make inspections hereinafter required and shall either approve that portion of the work which has been completed or notify the permit holder wherein the same fails to comply with the provisions of this chapter. Where it is found by inspection that the conditions are not as stated or shown in the application, the Township Engineer may refuse to approve further work until approval is obtained for a revised grading plan.

B. Plans for the grading work shall be approved by the Township Engineer and shall be maintained at the site during the progress of the grading work and until the work has been approved.

C. The permit holder shall notify the Township Engineer in order to obtain inspections, in accordance with the following schedule, at least 48 hours before the inspection is to be made:

(1) Initial inspection. When work on the excavation or fill is about to be commenced.

(2) Rough grading. When all rough grading has been completed.

(3) Drainage facilities. When drainage facilities are to be installed and before such facilities are backfilled.

(4) Special structures. When excavations are complete for retaining and crib walls, and when reinforcing steel is in place and before concrete is poured.

(5) Final inspection. When all work, including the installation of all drainage and other structures, has been completed.

D. If at any of the work the Township Engineer shall determine by inspection that the nature of the grading is not in accordance with the approved permit or is not functioning as designed and/or is likely to endanger property or streets or alleys or create hazardous conditions, the Township Engineer may require, as a condition to allowing the work to be done, that such reasonable safety precautions be taken as the Township Engineer considers advisable to avoid such likelihood of danger. Safety precautions may include but shall not be limited specifying a flatter exposed slope, construction or additional drainage facilities, berms, terracing, compaction or cribbing.

~~A. All inspections shall be the responsibility of the Director of Code Enforcement or his qualified designee. [Amended 6-30-1986 by Ord. No. 1960]~~

~~B. Inspections will be carried out on a random basis, except as stated in Subsection E of this section. However, a set of as-built plans shall be on file at the site and authenticated by a registered professional engineer. When it is deemed acceptable to the Director of Code Enforcement, a designated qualified person may authenticate the as-built plans and will assume full responsibility for quality of work. [Amended 6-30-1986 by Ord. No. 1960]~~

~~C.E. Any and all as-built plans shall be available on the site at all times and be subject to inspection and inquiry.~~

~~D. Engineering check notes shall accompany all as-built plans which involve structural or mechanical~~

~~measures and shall serve as supporting evidence that structures meet design standards and specifications.~~

~~E.F. A final inspection shall be conducted by the Director of Code Enforcement to certify compliance with this chapter.~~ Satisfactory compliance with this chapter shall be necessary before issuance of an occupancy permit. ~~[Amended 6-30-1986 by Ord. No. 1960]~~

§ 78-11. Payment of inspection costs by applicant; deposit of sum to cover costs required. [Amended 6-30-1986 by Ord. No. 1960]

All applicants shall bear all cost of inspections required hereunder and shall deposit with the Director of Finance such sum as the Director of Code Enforcement shall determine to be necessary to guarantee payment of the cost of such inspections.

§ 78-12. Violations and penalties. [Amended 6-13-1988 by Ord. No. 2019 ; 3-12-2012 by Ord. No. 2660]

Any person, firm or corporation violating any provision of this chapter shall, upon summary conviction before any District Justice of the Peace, pay a fine not exceeding \$1,000 and costs of prosecution; and in default of one payment of the fine and costs, the violator may be sentenced to the county jail for a term of not more than 90 days. Each and every day in which any person, firm or corporation shall be in violation of this chapter shall constitute a separate offense.

Chapter 78

Erosion and Sediment Control; Stormwater Management

Article II Stormwater Management General Provisions

§ 78-13 Short Title.

This Ordinance shall be known and may be cited as the “Township of Haverford Stormwater Management Ordinance.”

§ 78-14 Statement of Findings.

The Board of Commissioners of Haverford Township finds that:

- A. Inadequate management of accelerated runoff of stormwater resulting from development throughout a watershed increases runoff volumes, flows and velocities, contributes to erosion and sedimentation, overtaxes the carrying capacity of streams and storm sewers, greatly increases the cost of public facilities to carry and control stormwater, undermines flood plain management and flood control efforts in *upstream and* downstream communities, reduces ~~groundwater recharge~~ *infiltration*, threatens public health and safety, and increases nonpoint source pollution of water resources.
- B. Inadequate planning and management of stormwater runoff resulting from land development throughout a watershed can also harm surface water resources by changing the natural hydrologic patterns, accelerating stream flows (which increase scour and erosion of streambeds and streambanks, thereby elevating sedimentation), destroying aquatic habitat, and elevating aquatic pollutant concentrations and loadings such as sediments, nutrients, heavy metals, and pathogens. Groundwater resources are also impacted through loss of recharge.
- C. A comprehensive program of stormwater management (SWM), including *minimization of impacts of development, redevelopment*, ~~reasonable regulation of development~~ and activities causing accelerated runoff, is fundamental to the public health, safety, and welfare and the protection of people of the Commonwealth, their resources, and the environment.
- D. Stormwater is an important water resource that ~~provides groundwater recharge~~ *by providing infiltration* for water supplies and supports the base flow of streams, which also protects and maintains surface water quality.
- E. Impacts from stormwater runoff can be minimized by using project designs that maintain the natural hydrologic regime and sustain high water quality, *infiltration* ~~groundwater recharge~~, stream baseflow, and aquatic ecosystems. The most cost-effective and environmentally advantageous way to manage stormwater runoff is through nonstructural project design that minimizes impervious surfaces and sprawl, avoids sensitive areas (i.e., stream buffers, floodplains, steep slopes), and considers

topography and soils to maintain the natural hydrologic regime.

- F. Public education on the control of pollution from stormwater is an essential component in successfully addressing stormwater.
- G. Federal and state regulations require certain municipalities to implement a program of stormwater controls. These municipalities are required to obtain a permit for stormwater discharges from their separate storm sewer systems under the National Pollutant Discharge Elimination System (NPDES) program.
- H. Nonstormwater discharges to municipal separate storm sewer systems can contribute to pollution of waters of the commonwealth by Haverford Township.

I. The use of green infrastructure and low impact development (LID) are intended to address the root cause of water quality impairment by using systems and practices which use or mimic natural processes to: 1) infiltration and recharge, 2) evapotranspire, and/or 3) harvest and use precipitation near where it falls to earth. Green infrastructure practices, LID, and Cluster Development (CD) contribute to the restoration or maintenance of pre-development hydrology.

§ 78-15 Purpose.

~~The purpose of this Ordinance is to promote public health, safety, and welfare within the Township of Haverford by maintaining the natural hydrologic regime and minimizing the impacts described in §78-14 of this article through provisions designed to:~~ *The purpose of this ordinance is to promote the public health, safety, and general welfare, property, and water quality by implementing drainage and stormwater management practices, criteria, and provisions included herein for land development, construction, and Earth Disturbance Activities, to achieve the following throughout the Township:*

- A. Promote alternative project designs and layouts that minimize the impacts on surface and groundwater.
- B. Promote nonstructural best management practices (BMPs).
- C. Minimize increases in runoff stormwater volume.
- D. Minimize impervious surfaces.
- E. Manage accelerated stormwater runoff and erosion and sedimentation problems and stormwater runoff impacts at their source by regulating activities that cause these problems.
- F. Provide review procedures and performance standards for stormwater planning and management.
- G. Utilize and preserve existing natural drainage systems as much as possible.
- H. Manage stormwater impacts close to the runoff source, requiring a minimum of structures and relying on natural processes.
- I. Focus on infiltration of stormwater to maintain base flow, to prevent degradation of surface and groundwater quality, and to otherwise protect water resources.
- J. Protect base flows and quality of streams and watercourses, where possible.

- K. Meet legal water quality requirements under state law, including regulations at 25 Pennsylvania Code Chapter 93.4a ~~requiring protection and maintenance of “existing uses” and maintenance of the level of water quality to support those uses in all streams, and the protection and maintenance of water quality in “special protection” streams~~ ***to protect, maintain, reclaim, and restore the existing and designated uses of the Waters of the Commonwealth.***
- L. Address the quality and quantity of stormwater discharges from the development site.
- M. Provide a mechanism to identify stormwater controls necessary ***standards to meet certain*** NPDES ***MS4*** permit requirements.
- N. Implement an illicit discharge detection and elimination program that addresses non-stormwater discharges into the Municipality’s separate storm sewer system (***MS4***).
- O. Preserve the flood-carrying capacity of streams.
- P. ***Protect water quality by removing and/or treating pollutants prior to discharge to ground- and surface waters throughout Haverford Township, and to protect, restore, and maintain the chemical, physical, and biological quality of ground and surface waters.***
- Q. ***Reduce flooding impacts and prevent a significant increase in surface runoff rates and volumes, pre-development to post-development, which could worsen flooding downstream in the watershed, enlarge floodplains, erode stream banks, and create other flood-related health, welfare or property losses; in general, to preserve and restore the natural flood-carrying capacity of streams and their floodplains.***
- R. Prevent accelerated scour, erosion and sedimentation of stream channels.
- S. Provide performance standards and design criteria based on watershed-wide stormwater management planning.
- T. Provide proper operation and maintenance of all permanent stormwater management facilities and BMPs that are implemented within the Township.
- U. ***Implement the requirements of Total Maximum Daily Loads (TMDLs) where applicable to waters within or impacted by the Township.***

§ 78-16 **Statutory Authority.**

The Township is empowered or required to regulate land use activities that affect runoff and surface and groundwater quality and quantity by the authority of :

- A. Act of October 4, 1978, 32 P.S., P.L. 864 (Act 167) § 680.1 et seq., as amended, the "Stormwater Management Act" (hereinafter referred to as "the Act");
- B. Water Resources Management Act of 2002, as amended;
- C. ~~Second Class Township Code, 53 P.S. §§66501 et. Seq., as amended;~~

~~D. Pennsylvania Municipalities Planning Code, Act 247, as amended.~~

E. First Class Township Code, 53, Section 55101 et seq;

F. Act of July 31, 1968, P.L. 805, No. 247, Pennsylvania Municipalities Planning Code, Act 247, as amended.

§ 78-17 **Applicability/regulated activities.**

All regulated activities and all activities that may affect stormwater runoff, including but not limited to land development, redevelopment, and earth disturbance activity located within the municipality, are subject to regulation by this Ordinance.

- A. This article shall apply to all areas of Haverford Township.
- B. This article shall only apply to permanent structural and nonstructural stormwater management BMPs constructed as part of any of the regulated activities listed in this section.
- C. This article contains only the stormwater management performance standards and design criteria that are necessary or desirable from a watershed-wide perspective. Local stormwater management design criteria (e.g., inlet spacing, inlet type, collection system design and details, outlet structure design, etc.) shall continue to be regulated by the applicable municipal ordinances and applicable state regulations.
- D. The following activities are defined as "regulated activities" and shall be regulated by this article unless exempted by § **78-18**:
 1. Land development.
 2. Subdivisions.
 3. Alteration of the natural hydrologic regime.
 4. Construction or reconstruction of or addition of new impervious surfaces (i.e., driveways, parking lots, roads, etc.).
 5. Construction of new buildings or additions to existing buildings.
 6. Redevelopment.
 7. Diversion piping or encroachments in any natural or man-made channel.
 8. Nonstructural and structural stormwater management BMPs or appurtenances thereto.

9. Earth disturbance activities of greater than 5,000 square feet.
10. Earth disturbances within 50 feet of other sensitive environmental features, such as streams, ponds, lakes and wetlands.
11. Any of the above regulated activities which were approved more than five years prior to the effective date of this article and resubmitted for municipal approval.

Table 105.1 summarizes the applicability requirements of the ordinance. "~~Proposed~~ **Regulated** impervious surface" in Table 105.1 includes new, additional, or replacement impervious surface/cover. Repaving existing surfaces without reconstruction does not constitute "replacement."

§ 78-18 Exemptions.

Exemptions for land use activities. An exemption shall not relieve the Applicant from implementing the requirements of the municipal Ordinance or from implementing such measures as are necessary to protect public health, safety, and property. An exemption shall not relieve the Applicant from complying with the special requirements for watersheds draining to identified high quality (HQ) or exceptional value (EV) waters or any other current or future state or municipal water quality protection requirements. If a drainage problem is documented or known to exist downstream of, or is expected from the proposed activity, then the Municipality may withdraw exemptions listed in Table 105.1 and require the Applicant to comply with all requirements of this Ordinance. Even though the Applicant is exempt, he is not relieved from complying with other municipal ordinances or regulations.

Table 105.1 summarizes the exemptions from certain provisions of this Ordinance. Exemptions are for the items noted in Table 105.1 only, and shall not relieve the Applicant from other applicable sections of this Ordinance.

Any regulated activity that is exempt from some provisions of the Ordinance is exempt only from those provisions. If development is to take place in phases, the developer is responsible for implementing the requirements of the Ordinance as the impervious cover/earth disturbance threshold is met. The date of the municipal Ordinance adoption shall be the starting point from which to consider tracts as "parent tracts" in which future subdivisions and respective impervious area and earth disturbance computations shall be cumulatively considered. Exemption shall not relieve the applicant from implementing such measures as are necessary to protect health, safety, and property. For example:

If a property owner proposed a 150 square foot shed after adoption of the municipal stormwater management ordinance, that property owner be exempted from the water quality and quantity requirements of the ordinance as noted in Table 105.1 of the ordinance. If, at a later date, the property owner proposes to construct a 499 square foot room addition, the applicant would be required to comply with the requirements for the Simplified Method for the full 649 square feet of impervious cover created since adoption of the municipal ordinance. If an additional 700 square

foot swimming pool/patio is proposed later, the property owner would be required implement the full stormwater quantity and quality control submission requirements of this ordinance for the total 1, 349 square feet of additional impervious surface added to the original property since adoption of the municipal ordinance.

A. Exemptions for land use activities. The following land use activities are exempt from the drainage plan submission requirements of this article:

- (1) Use of land for gardening for home consumption.
- (2) Agriculture when operated in accordance with a conservation plan, nutrient management plan, or erosion and sedimentation control plan approved by the County Conservation District, including activities such as growing crops, rotating crops, tilling of soil, and grazing animals. Installation of new or expansion of existing farmsteads, animal housing, waste storage, and production areas having impervious surfaces that result in a net increase in earth disturbance of greater than 5,000 square feet shall be subject to the provisions of this article.
- (3) ***High Tunnel if:***
 - a. ***The High Tunnel or its flooring does not result in an impervious surface exceeding 25% of all structures located on the Landowner's total contiguous land area; and***
 - b. ***The High Tunnel meets one of the following:***
 - i. ***The High Tunnel is located at least 100 feet from any perennial stream or watercourse, public road, or neighboring property line.***
 - ii. ***The High Tunnel is located at least 35 feet from any perennial stream or watercourse, public road or neighboring property line and located on land with a slope not greater than 7%.***
 - iii. ***The High Tunnel is supported with a buffer or diversion system that does not directly drain into a stream or other watercourse by managing stormwater runoff in a manner consistent with the requirements of Pennsylvania Act 167.***
- (4) Forest management operations which are following the Department of Environmental Protection's (DEP) management practices contained in its publication "Soil Erosion and Sedimentation Control Guidelines for Forestry" and are operating under an approved erosion and sedimentation plan and must comply with the stream buffer requirements in § 78-42.
- (4) Road replacement, development, or redevelopment that has less than 1,000 square feet of new, additional, or replaced impervious surface/cover, or in the case of earth disturbance only, less than 5,000 square feet of disturbance, is exempt from this article.
- (5) ***Repaving without reconstruction.***

B. Exemptions for land development activities.

- (1) The following land development and earthmoving activities are exempt from the drainage plan

submission requirements of this article.

- (a) A maximum of ~~1,000~~ 500 square feet of new, additional, or replacement proposed impervious surface.
- (b) Up to a maximum of 5,000 square feet of disturbed earth.
- (2) These criteria shall apply to the total development even if the development is to take place in phases. The date of the municipal ordinance adoption shall be the starting point from which to consider tracts as "parent tracts" upon which future subdivisions and respective earth disturbance computations shall be cumulatively considered.

The activities exempted above are still encouraged to implement the stormwater management practices as indicated in Appendix B.

- (3) The developer should first determine if the proposed activity will result in the introduction of ~~1,000~~ 500 square feet or more of new, additional, or replacement impervious surface. If not, the developer should next determine if the proposed activity will involve earthmoving of over 5,000 square feet. If not, then the project is exempt from the drainage plan requirements. Examples:
 - (a) A project introducing ~~1,100~~ 500 square feet of impervious cover, but only 4,900 square feet of earthmoving is regulated by this article.
 - (b) A project involving 5,100 square feet of earthmoving, but resulting in ~~900~~ 400 square feet of impervious cover is regulated.
 - (c) A project introducing ~~900~~ 400 square feet of impervious cover and involving 4,900 square feet of earthmoving is exempt from the drainage plan requirements of this article.

C. Additional exemption criteria:

- (1) Exemption responsibilities. An exemption shall not relieve the applicant from implementing such measures as are necessary to protect public health, safety, and property.
- (2) HQ and EV streams. An exemption shall not relieve the applicant from meeting the special requirements for watersheds draining to identified high quality (HQ) or exceptional value (EV) waters and source water protection areas (SWPA) and requirements for nonstructural project design sequencing (§ 78-33).
- (3) Drainage problems. If a drainage problem is documented or known to exist downstream of or is expected from the proposed activity, then Haverford Township may require the applicant to comply with this article.
- (4) Emergency exemption. Emergency maintenance work performed for the protection of public health, safety, and welfare. A written description of the scope and extent of any emergency work performed shall be submitted to the Township of Haverford within two calendar days of the commencement of the activity. If the Township of Haverford finds that the work is not an emergency, then the work shall cease immediately, and the requirements of this article shall be addressed as applicable.

- (5) Maintenance exemption. Any maintenance to an existing stormwater management system made in accordance with plans and specifications approved by the municipal Engineer or the Township of Haverford.
- (6) Even though the developer is exempt, he/she is not relieved from complying with other regulations.

§78-19 Repealer.

Any other ordinance provision(s) or regulation of the municipality inconsistent with any of the provisions of this Ordinance is hereby repealed to the extent of the inconsistency only.

§ 78-20 Severability.

~~Any ordinance or ordinance provision of Haverford Township inconsistent with any of the provisions of this article is hereby repealed to the extent of the inconsistency only.~~ ***In the event that a court of competent jurisdiction declares any section or provision of this ordinance invalid, such decision shall not affect the validity of any of the remaining provisions of this Ordinance.***

§ 78-21 Compatibility with other ordinances or legal requirements.

- A. Approvals issued and actions taken under this Ordinance do not relieve the applicant of the responsibility to secure required permits or approvals for activities regulated by any other code, law, regulation or ordinance.
- B. To the extent that this article imposes more rigorous or stringent requirements for stormwater management, the specific requirements contained in this article shall be followed.
- C. Nothing in this article shall be construed to affect any of Haverford Township's requirements regarding stormwater matters that do not conflict with the provisions of this article, such as local stormwater management design criteria (e.g., inlet spacing, inlet type, collection system design and details, outlet structure design, etc.). Conflicting provisions in other municipal ordinances or regulations shall be construed to retain the requirements of this article addressing state water quality requirements. ***The requirements of this ordinance shall supersede any conflicting requirements in other municipal ordinances or regulations.***

§ 78-22 Erroneous Permit.

Any permit or authorization issued or approved based on false, misleading or erroneous information provided by an applicant is void without the necessity of any proceedings for revocation. Any work undertaken or use established pursuant to such permit or other authorization is unlawful. No action may be taken by a board, agency or employee of the Township purporting to validate such a violation.

§ 78-23 Waivers.

- A. ***If the Township determines that any requirement under this Ordinance cannot be achieved for a particular regulated activity, the Township may, after an evaluation of alternatives, approve measures other than those in this Ordinance, subject to Section § 78-22, Waivers; paragraphs B and C.***

- B. Waivers or modifications of the requirements of this Ordinance may be approved by the Township if enforcement will exact undue hardship because of peculiar conditions pertaining to the land in question, provided that the modifications will not be contrary to the public interest and that the purpose of the Ordinance is preserved. Cost or financial burden shall not be considered a hardship. Modification may be considered if an alternative standard or approach will provide equal or better achievement of the purpose of the Ordinance. A request for modifications shall be in writing and accompany the Stormwater Management Site Plan submission. The request shall provide the facts on which*
- C. the Stormwater Management Site Plan submission. The request shall provide the facts on which*
- D. mwater Management Site Plan submission. The request shall provide the facts on which*
- E. No waiver or modification of any regulated stormwater activity involving earth disturbance greater than or equal to one acre may be granted by the Township unless that action is approved in advance by the Department of Environmental Protection (DEP) or the Delaware County Conservation District.*

§ 78-24 **Word Usage.**

For the purposes of this article, certain terms and words used herein shall be interpreted as follows:

- A. Words used in the present tense include the future tense; the singular number includes the plural, and the plural number includes the singular; words of masculine gender include feminine gender; and words of feminine gender include masculine gender.
- B. The word "includes" or "including" shall not limit the term to the specific example but is intended to extend its meaning to all other instances of like kind and character.
- C. The word "person" includes an individual, firm, association, organization, partnership, trust, company, corporation, unit of government, or any other similar entity.
- D. The words "shall" and "must" are mandatory; the words "may" and "should" are permissive.
- E. The words "used" or "occupied" include the words "intended, designed, maintained, or arranged to be used, occupied, or maintained."

As used in this article, the following terms shall have the meanings indicated:

ACCELERATED EROSION

The removal of the surface of the land through the combined action of man's activity and the natural processes at a rate greater than would occur because of the natural process alone.

AGRICULTURAL ACTIVITY

Activities associated with agriculture such as agricultural cultivation, agricultural operation, and animal heavy use areas. This includes the work of producing crops including tillage, land clearing, plowing, disking, harrowing, planting, harvesting crops or pasturing and raising of livestock and installation of

conservation measures. Construction of new buildings or impervious area is not considered an agricultural activity.

ALTERATION

As applied to land, a change in topography as a result of the moving of soil and rock from one location or position to another; also the changing of surface conditions by causing the surface to be more or less impervious; land disturbance.

APPLICANT

A landowner, developer, or other person who has filed an application to the municipality for approval to engage in any regulated activity at a project site in the municipality.

AS-BUILT DRAWINGS

Engineering or site drawings maintained by the contractor as he constructs the project and upon which he documents the actual locations of the building components and changes to the original contract documents. These documents, or a copy of same, are turned over to the municipal Engineer at the completion of the project.

BANKFULL

The channel at the top-of-bank or point from where water begins to overflow onto a floodplain.

BASEFLOW

Portion of stream discharge derived from groundwater; the sustained discharge that does not result from direct runoff or from water diversions, reservoir releases, piped discharges, or other human activities.

BEST MANAGEMENT PRACTICES (BMP)

~~Methods, measures, or practices used to prevent or reduce surface runoff and/or water pollution, including but not limited to structural and nonstructural stormwater management practices and operation and maintenance procedures. See also “nonstructural best management practices (BMPs)”.~~ *Activities, facilities, designs, measures, or procedures used to manage stormwater impacts from regulated activities, to meet state water quality requirements, to promote infiltration, and to otherwise meet the purposes of this Ordinance. Stormwater BMPs are commonly grouped into one of two broad categories or measures: “structural” or “nonstructural.” In this Ordinance, nonstructural BMPs or measures include certain low impact development practices used to minimize the contact of pollutants with stormwater runoff. These practices aim to limit the total volume of stormwater runoff and manage stormwater at its source by techniques such as protecting natural systems and incorporating existing landscape features. Nonstructural BMPs include, but are not limited to, low impact development practices such as the protection of sensitive and special value features such as wetlands and riparian areas, the preservation of open space while clustering and concentrating development, the reduction of impervious cover, and the disconnection of rooftops from storm sewers. Structural BMPs are those that consist of a physical to capture and treat stormwater runoff. Structural BMPs include, but are not limited to, a wide variety of practices and devices, from large-scale retention ponds and constructed wetlands to small-scale underground treatment systems, infiltration facilities, filter strips, bioretention, wet ponds, permeable paving, grassed swales, riparian buffers, sand filters, detention basins, and manufactured devices. Structural and nonstructural stormwater BMPs are permanent appurtenances to the project site.*

BIORETENTION

A stormwater retention area that utilizes woody and herbaceous plants and soils to remove pollutants before infiltration occurs.

BUFFER

~~The area of land immediately adjacent to any stream, measures perpendicular to and horizontally from the top of bank on both sides of a stream (see “top of bank”)~~ *See “Riparian Buffer”.*

CHANNEL

An open drainage feature through which stormwater flows. Channels include, but shall not be limited to, natural and man-made drainageways, swales, streams, ditches, canals, and pipes flowing partly full.

CHANNEL EROSION

The widening, deepening, or headward cutting of channels and waterways caused by stormwater runoff or bankfull flows.

CISTERN

An underground reservoir or tank for storing rainwater.

CONSERVATION DISTRICT

~~A conservation district, as defined in Section 3© of the Conservation District Law (3 P. S. § 851(e)) that has the authority under a delegation agreement executed with DEP to administer and enforce all or a portion of the regulations promulgated under 25 Pa. Code 102.~~ *The Delaware County Conservation District.*

CONVEYANCE

~~A facility or structure used for the transportation or transmission of something from one place to another.~~ *A natural or manmade, existing, or proposed Stormwater Management Facility, feature or channel used for the transportation or transmission of stormwater from one place to another. For the purposes of this Ordinance, Conveyance shall include pipes, drainage ditches, channels, and swales (vegetated and other), gutters, stream channels, and like facilities or features.*

CULVERT

A structure with its appurtenant works which carries water under or through an embankment or fill.

DAM

A man-made barrier, together with its appurtenant works, constructed for the purpose of impounding or storing water or another fluid or semifluid. A dam may include a refuse bank, fill, or structure for highway, railroad, or other purposes which impounds or may impound water or another fluid or semifluid.

DEPARTMENT

The Pennsylvania Department of Environmental Protection. *Also referred to as “DEP”, “PA DEP” or “PADEP”.*

DESIGNEE

The agent of the Delaware County Planning *Department*, Delaware County Conservation District, and/or agent of the governing body involved with the administration, review, or enforcement of any provisions of this article by contract or memorandum of understanding.

DESIGN PROFESSIONAL (QUALIFIED)

A Pennsylvania-registered professional engineer, registered landscape architect, or registered professional land surveyor trained to develop stormwater management plans, *or any person licensed by the Pennsylvania Department of State or qualified by law to perform the work required by the ordinance.*

DESIGN STORM

The magnitude and temporal distribution of precipitation from a storm event measured in probability of occurrence (e.g., a five-year storm) and duration (e.g., 24 hours), used in the design and evaluation of stormwater management systems. Also see Return Period.

DETENTION BASIN

An impoundment designed to collect and retard stormwater runoff by temporarily storing the runoff and releasing it at a predetermined rate. Detention basins are designed to drain completely soon after a rainfall event and become dry until the next rainfall event.

DETENTION VOLUME

The volume of runoff that is captured and released into the waters of the Commonwealth at a controlled rate.

DEVELOPER

A person, *or company, or organization* who seeks to undertake any regulated earth disturbance activities at a project site in Haverford Township.

DEVELOPMENT, LAND

Any human-induced change to improved or unimproved real estate, whether public or private, including but not limited to land development, construction, installation, or expansion of a building or other structure, land division, street construction, drilling, and site alteration, such as embankments, dredging, grubbing, grading, paving, parking or storage facilities, excavation, filling, stockpiling, or clearing. As used in this article, development encompasses both new development and redevelopment.

DEVELOPMENT SITE (SITE)

See Project Site.

DIAMETER AT BREAST HEIGHT (DBH)

The outside bark diameter at breast height which is defined as 4.5 feet (1.37m) above the forest floor on

the uphill side of the tree.

DIFFUSED DRAINAGE DISCHARGE

Drainage discharge that is not confined to a single point location or channel, including sheet flow or shallow concentrated flow.

DISCHARGE

- A. (verb) To release water from a project, site, aquifer, drainage basin, or other point of interest;
- B. (noun) The rate and volume of flow of water such as in a stream, generally expressed in cubic feet per second (see "peak discharge").

DISCHARGE POINT

The point of discharge for a stormwater facility.

DISTURBED AREAS

An unstabilized land area where an earth disturbance activity is occurring or has occurred.

DITCH

A man-made waterway constructed for irrigation or stormwater conveyance purposes.

DOWNSLOPE PROPERTY LINE

That portion of the property line of the lot, tract, or parcels of land being developed, located such that overland or pipe flow from the project site would be directed towards it by gravity.

DRAINAGE CONVEYANCE FACILITY

A stormwater management facility designed to transport stormwater runoff that includes channels, swales, pipes, conduits, culverts, and storm sewers.

DRAINAGE EASEMENT

A right granted by a landowner to a grantee allowing the use of private land for stormwater management purposes.

~~**DRAINAGE PERMIT**~~

~~A permit issued by Haverford Township after the drainage plan has been approved.~~

~~**DRAINAGE PLAN**~~

~~The documentation of the stormwater management system, if any, to be used for a given development site, the contents of which are established in § 78_____.~~

EARTH DISTURBANCE ACTIVITY

A construction or other human activity which disturbs the surface of the land, including, but not limited to: clearing and grubbing; grading; excavations; embankments; road maintenance; building construction; and the moving, depositing, stockpiling, or storing of soil, rock, or earth materials.

EMERGENCY SPILLWAY

A conveyance area that is used to pass peak discharge greater than the maximum design storm controlled by the stormwater facility.

ENCROACHMENT

A structure or activity that changes, expands or diminishes the course, current, or cross-section of a watercourse, floodway or body of water.

EROSION

The natural process by which the surface of the land is worn away by water, wind or chemical action.

EROSION AND SEDIMENT (*E&S*) CONTROL PLAN

A plan that is designed to minimize accelerated erosion and sedimentation. Said plan must be submitted to and approved by the appropriate conservation district before construction can begin.

EVAPOTRANSPIRATION (ET)

The combined processes of evaporation from the water or soil surface and transpiration of water by plants.

EXCEPTIONAL VALUE WATERS

Surface waters of high quality which satisfy Pennsylvania Code Title 25 Environmental Protection, Chapter 93, Water Quality Standards, § 93.4b(b) (relating to anti-degradation).

EXISTING CONDITIONS

The dominant land cover during the 5-year period immediately preceding a proposed regulated activity.

FEMA

Federal Emergency Management Agency.

FINANCIAL HARDSHIP

A situation where the greatest possible profit cannot be fully realized from development/redevelopment on a given parcel of land due to added costs or burdens associated with the design, construction, and/or maintenance of stormwater structures, facilities, buffers and/or setbacks.

FLOOD

A temporary condition of partial or complete inundation of land areas from the overflow of streams, rivers, and other waters of this commonwealth.

FLOODPLAIN

Any land area susceptible to inundation by water from any natural source or delineated by applicable *Department of Housing and Urban Development, Federal Emergency Management Agency* (FEMA) maps and studies as being a special flood hazard area.

FLOODWAY

The channel of the watercourse and those portions of the adjoining floodplains that are reasonably

required to carry and discharge the 100-year flood (*also called the base flood or one percent (1%) annual chance flood*). Unless otherwise specified, the boundary of the floodway is as indicated on maps and flood insurance studies provided by FEMA. In an area where no FEMA maps or studies have defined the boundary of the 100-year floodway, it is assumed--absent evidence to the contrary--that the floodway extends from the stream to 50 feet from the top of the bank of the stream .

FLUVIAL GEOMORPHOLOGY

The study of landforms associated with river channels and the processes that form them.

FOREST MANAGEMENT/TIMBER OPERATIONS

Planning and activities necessary for the management of forestland. These include conducting a timber inventory, preparation of forest management plans, silvicultural treatment, cutting budgets, logging road design and construction, timber harvesting, site preparation, and reforestation.

FREEBOARD

A vertical distance between the elevation of the design high water and the top of a dam, levee, tank, basin, swale, or diversion berm. The space is required as a safety margin in a pond or basin.

GRADE

- A. (noun) A slope, usually of a road, channel or natural ground specified in percent and shown on plans as specified herein.
- B. (verb) To finish the surface of a roadbed, the top of an embankment, or the bottom of an excavation.

GRASSED WATERWAY

A natural or man-made waterway, usually broad and shallow, covered with erosion-resistant grasses used to convey surface water.

GREEN INFRASTRUCTURE

Systems and practices that use or mimic natural processes to infiltrate, evapotranspire, or reuse stormwater on the site where it is generated. Also referred to as Green Stormwater Infrastructure (GSI).

GROUNDWATER

Water beneath the earth's surface that supplies wells and springs and is often between saturated soil and rock.

GROUNDWATER RECHARGE

The replenishment of existing natural underground water supplies from rain or overland flow.

HEC-HMS

The U.S. Army Corps Of Engineers, Hydrologic Engineering Center (HEC) – Hydrologic Modeling System (HMS). This model was used to model the Darby-Cobbs and Crum Creek watersheds during the

Act 167 plan development and was the basis for the standards and criteria of this article.

HIGH QUALITY WATERS

Surface waters having quality which exceeds levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water by satisfying Pennsylvania Code Title 25 Environmental Protection, Chapter 93, Water Quality Standards, § 93.4b(a).

HIGH TUNNEL

A structure which meets the following:

- 1. Is used for the production, processing, keeping, storing, sale or shelter of an agricultural commodity as defined in section 2 of the Act of December 19, 1974 (P.L. 973, No. 319), known as the “Pennsylvania Farmland and Forest Land Assessment Act of 1974,” or the storage of agricultural equipment or supplies; and*
- 2. Is constructed with all the following:*
 - a. has a metal, wood, or plastic frame;*
 - b. when covered, has a plastic, woven textile, or other flexible covering; and*
 - c. has a floor made of soil, crushed stone, matting, pavers, or a floating concrete slab.*

HOTSPOTS

Areas where land use or activities generate highly contaminated runoff, with concentrations of pollutants in excess of those typically found in stormwater.

HYDROGRAPH

A graph representing the discharge of water versus time for a selected point in the drainage system.

HYDROLOGIC REGIME

The hydrologic cycle or balance that sustains quality and quantity of stormwater, baseflow, storage and groundwater supplies under natural conditions.

HYDROLOGIC SOIL GROUP (HGS)

Infiltration rates of soils vary widely and are affected by subsurface permeability as well as surface intake rates. Soils are classified into four HSGs (A, B, C, and D) according to their minimum infiltration rate, which is obtained for bare soil after prolonged wetting. The NRCS defines the four groups and provides a list of most of the soils in the United States and their group classification. The soils in the area of the development site may be identified from a soil survey report that can be obtained from local NRCS offices or conservation district offices. Soils become less pervious as the HSG varies from A to D (NRCS1,2).

IMPERVIOUS SURFACE (IMPERVIOUS AREA)

~~A surface that prevents the infiltration of water into the ground. Impervious surfaces include, but are not limited to, streets, sidewalks, pavements, driveway areas, or roofs. Any surface areas designed to be gravel or crushed stone shall be regarded as impervious surface.~~ *Impervious surfaces shall include, but are not limited to, streets, sidewalks, swimming pool surface, pavements, additional indoor living spaces, patios, garages, storage sheds, and similar structures, driveway areas, or roofs, tennis or other paved courts. For the purposes of determining compliance with this Ordinance, compacted soils or stone surfaces used for*

vehicle parking and movement shall be considered impervious. Uncompacted gravel areas with no vehicular traffic shall be considered pervious per review by the Township Engineer. Surfaces that were designed to allow infiltration (i.e. pavers and areas of porous pavement) are not to be considered impervious surface if designed to function as a BMP per review by the Township Engineer. Additionally, for the purposes of determining compliance with this Ordinance, the total horizontal projection area of all ground-mounted and free-standing solar collectors, including solar photovoltaic cells, panels, and arrays, shall be considered pervious so long as the Township Engineer determines that the area underneath the solar photovoltaic cells, panels, and arrays is maintained as a vegetated pervious surface.

IMPOUNDMENT

A retention or detention basin designed to retain stormwater runoff and release it at a controlled rate.

INFILL

Development that occurs on smaller parcels that remain undeveloped but are within or in very close proximity to urban or densely developed areas. Infill development usually relies on existing infrastructure and does not require an extension of water, sewer, or other public utilities.

INFILTRATION

Movement of surface water into the soil, where it is absorbed by plant roots, evaporated into the atmosphere, or percolated downward to recharge groundwater.

INFILTRATION STRUCTURES

A structure designed to direct runoff into the underground water (e.g., French drains, seepage pits, or seepage trenches).

INFLOW

The flow entering the stormwater management facility and/or BMP.

INLET

The upstream end of any structure through which water may flow.

INTERMITTENT STREAM

A stream that flows only part of the time. Flow generally occurs for several weeks or months in response to seasonal precipitation or groundwater discharge.

INVERT

The lowest surface, the floor or bottom of a culvert, drain, sewer, channel, basin, BMP, or orifice.

KARST

A type of topography or landscape characterized by surface depressions, sinkholes, rock pinnacles/uneven bedrock surface, underground drainage, and caves. Karst is formed on carbonate

rocks, such as limestone or dolomite.

LAND DEVELOPMENT (DEVELOPMENT)

Inclusive of any or all of the following meanings:

- i. The improvement of one lot or two or more contiguous lots, tracts, or parcels of land for any purpose involving:
 - a. A group of two or more buildings or
 - b. The division or allocation of land or space between or among two or more existing or prospective occupants by means of, or for the purpose of streets, common areas, leaseholds, condominiums, building groups, or other features;
- ii. Any subdivision of land;
- iii. Development in accordance with Section 503(1.1) of the PA Municipalities Planning Code

LIMITING ZONE

A soil horizon or condition in the soil profile or underlying strata that includes one of the following:

- A. A seasonal high water table, whether perched or regional, determined by direct observation of the water table or indicated by soil mottling.
- B. A rock with open joints, fracture or solution channels, or masses of loose rock fragments, including gravel, with insufficient fine soil to fill the voids between the fragments.
- C. A rock formation, other stratum, or soil condition that is so slowly permeable that it effectively limits downward passage of water.

LOT

A designated parcel, tract, or area of land established by a plat or otherwise as permitted by law and to be used, developed, or built upon as a unit.

LOW IMPACT DEVELOPMENT (LID)

Site design approaches and small-scale stormwater management practices that promote the use of natural systems for infiltration, evapotranspiration, and reuse of rainwater. LID can be applied to new development, urban retrofits, and revitalization projects. LID utilizes design techniques that infiltrate, filter, evaporate, and store runoff close to its source. Rather than rely on costly large-scale conveyance and treatment systems, LID addresses stormwater through a variety of small, cost-effective landscape features located on-site.

MAIN STEM (MAIN CHANNEL)

Any stream segment or other runoff conveyance used as a reach in watershed-specific hydrologic models.

MANAGED RELEASE CONCEPT (MRC)

A post-construction stormwater management (PCSM) strategy that comprises the collection, management, and filtration of captured runoff from the contributing drainage area through a best management practice (BMP) that is preferably vegetated and includes release of a portion of the captured runoff through an underdrain within the BMP. If the MRC BMP is not vegetated, then pretreatment is required to meet water quality requirements. MRC is intended to be used for project areas or subareas where infiltration is considered infeasible to meet regulatory requirements. Refer to the "Managed Release Concept" Version 1.2 (August 25, 2020) guidance document or latest guidance from PA DEP.

MANNING EQUATION (MANNING FORMULA)

A method for calculation of velocity of flow (e.g., feet per second) and flow rate (e.g., cubic feet per second) in open channels based upon channel shape, roughness, depth of flow, and slope. "Open channels" may include closed conduits so long as the flow is not under pressure.

MAXIMUM DESIGN STORM

The maximum (largest) design storm that is controlled by the stormwater facility.

MUNICIPAL ENGINEER

A professional engineer licensed as such in the Commonwealth of Pennsylvania, duly appointed as the Engineer for a municipality, planning agency, or joint planning commission.

MUNICIPALITY

Haverford Township, Delaware County, Pennsylvania.

NATURAL CONDITION

Predevelopment condition.

NATURAL HYDROLOGIC REGIME

See "Hydrologic Regime."

NATURAL RECHARGE AREA

Undisturbed surface area or depression where stormwater collects and a portion of which infiltrates and replenishes the underground and groundwater.

NONPOINT SOURCE POLLUTION

Pollution that enters a water body from diffuse origins in the watershed and does not result from discernible, confined, or discrete conveyances.

NONSTORMWATER DISCHARGES

Water flowing in stormwater collection facilities, such as pipes or swales, which is not the result of a rainfall event or snowmelt.

NONSTRUCTURAL BEST MANAGEMENT PRACTICES (BMPs)

Methods of controlling stormwater runoff quantity and quality, such as innovative site planning,

impervious area and grading reduction, protection of natural depression areas, temporary ponding on site, and other techniques.

NPDES

National Pollutant Discharge Elimination System, the federal government's system for issuance of permits under the Clean Water Act, which is delegated to DEP in Pennsylvania.

NRCS

Natural Resource Conservation Service (previously SCS).

OPEN CHANNEL

A conveyance channel that is not enclosed.

OUTFALL

"Point source," as described in 40 CFR § 122.2, at the point where Haverford Township's storm sewer system discharges to surface waters of the commonwealth.

OUTFLOW

The flow exiting the stormwater management facility and/or BMP.

OUTLET

Points of water disposal to a stream, river, lake, tidewater, or artificial drain.

PARENT TRACT

The parcel of land from which a land development or subdivision originates, determined from the date of municipal adoption of this article.

PARKING LOT STORAGE

Involves the use of parking areas as temporary impoundments with controlled release rates during rainstorms.

PEAK DISCHARGE

The maximum rate of stormwater runoff from a specific storm event.

PENN STATE RUNOFF MODEL

The computer-based hydrologic model developed at Pennsylvania State University.

PENNSYLVANIA STORMWATER BEST MANAGEMENT PRACTICES MANUAL

(Document Number 363-0300-002) (December 2006, and as subsequently amended) - The Best Management Practices Manual published by the Pennsylvania Department of Environmental Protection. The manual is to supplement federal and state regulations and the Department of Environmental Protection's Comprehensive Stormwater Management Policy that emphasizes effective site planning as the preferred method of managing runoff while also providing numerous examples of BMPs that can be employed in Pennsylvania to further avoid and minimize flooding and water resource problems.

ce problems.

PERVIOUS AREA

Any area not defined as impervious.

PIPE

A culvert, closed conduit, or similar structure (including appurtenances) that conveys stormwater.

PLANNING COMMISSION

The Planning Commission of Haverford Township.

POINT SOURCE

Any discernible, confined, and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel or conduit from which stormwater is or may be discharged, as defined in state regulations at 25 Pennsylvania Code § 92.1.

POSTCONSTRUCTION

Period after construction during which disturbed areas are stabilized, stormwater controls are in place and functioning, and all proposed improvements in the approved land development plan are completed.

PRECONSTRUCTION

Prior to commencing construction activities.

PREDEVELOPMENT CONDITION

Undeveloped/natural condition.

PRETREATMENT

Techniques employed in stormwater BMPs to provide storage or filtering to trap coarse materials and other pollutants before they enter the system, but not necessarily designed to meet the water quality volume requirements of § 78-45.

PROJECT SITE

The specific area of land where any regulated activities in Haverford Township are planned, conducted or maintained.

QUALIFIED PROFESSIONAL

Any person licensed by the Pennsylvania Department of State or otherwise qualified by law to perform the work required by this Ordinance.

RATIONAL FORMULA

A rainfall-runoff relation used to estimate peak flow.

REACH

Any stream segment or other runoff conveyance used in the watershed-specific hydrologic models.

RECHARGE

The replenishment of groundwater through the infiltration of rainfall, other surface waters, or land application of water or treated wastewater.

RECONSTRUCTION

Demolition and subsequent rebuilding of impervious surface.

RECORD DRAWINGS

Original documents revised to suit the as-built conditions and subsequently provided by the engineer to the client. The engineer reviews the contractor's as-builts against his/her own records for completeness, then either turns these over to the client or transfers the information to a set of reproducibles, in both cases for the client's permanent records.

REDEVELOPMENT

Any development that requires demolition or removal of existing structures or impervious surfaces at a site and replacement with new impervious surfaces. Maintenance activities such as top-layer grinding and repaving are not considered to be redevelopment. Interior remodeling projects and tenant improvements are also not considered to be redevelopment.

REGULATED ACTIVITIES

Any earth disturbance activities or any activities that involve the alteration or development of land in a manner that may affect stormwater runoff. Actions or proposed actions that have an impact on stormwater runoff quality or quantity and that are specified in § 78-17 of this article.

REGULATED EARTH DISTURBANCE ACTIVITY

Activity involving earth disturbance subject to regulation under 25 Pa. Code 92, 25 Pa. Code 102, or the Clean Streams Law. Defined under NPDES Phase II regulations as earth disturbance activity of one acre or more with a point source discharge to surface waters or Haverford Township's storm sewer system or five acres or more regardless of the planned runoff. This includes earth disturbance on any portion of, part, or during any stage of a larger common plan of development.

REGULATED IMPERVIOUS SURFACE

Proposed impervious surface as part of a current proposed activity and all existing impervious surfaces installed after February 15, 2005 as part of a previous activity.

RELEASE RATE

The percentage of existing conditions' peak rate of runoff from a site or subarea to which the proposed conditions' peak rate of runoff must be reduced to protect downstream areas.

REPAVING

Replacement of the impervious surface that does not involve reconstruction of an existing paved (impervious) surface.

REPLACEMENT PAVING

Reconstruction of and full replacement of an existing paved (impervious) surface.

RETENTION BASIN

A structure in which stormwater is stored and not released during the storm event. Retention basins are designed for infiltration purposes and do not have an outlet. The retention basin must infiltrate stored water in four days or less.

RETENTION VOLUME/REMOVED RUNOFF

The volume of runoff that is captured and not released directly into the surface waters of this Commonwealth during or after a storm event.

RETURN PERIOD

The average interval, in years, within which a storm event of a given magnitude can be expected to occur one time. For example, the 25-year return period rainfall would be expected to occur on average once every 25 years; or stated in another way, the probability of a 25-year storm occurring in any one year is 0.04 (i.e., a 4% chance).

RIPARIAN

Pertaining to anything connected with or immediately adjacent to the banks of a stream or other body of water.

RIPARIAN BUFFER

An area of land adjacent to a body of water and managed to maintain the integrity of stream channels and shorelines to 1) reduce the impact of upland sources of pollution by trapping, filtering, and converting sediments, nutrients, and other chemicals, and 2) supply food, cover and thermal protection to fish and other wildlife.

RISER

A vertical pipe extending from the bottom of a pond that is used to control the discharge rate from the pond for a specified design storm.

ROAD MAINTENANCE

Earth disturbance activities within the existing road cross section, such as grading and repairing existing unpaved road surfaces, cutting road banks, cleaning or clearing drainage ditches, and other similar activities.

ROOF DRAINS

A drainage conduit or pipe that collects water runoff from a roof and leads it away from the structure.

ROOFTOP DETENTION

The temporary ponding and gradual release of stormwater falling directly onto flat roof surfaces using controlled-flow roof drains in building designs.

RUNOFF

Any part of precipitation that flows over the land surface.

SALDO

Subdivision and Land Development Ordinance.

SEDIMENT

Soils or other materials transported by surface water as a product of erosion.

SEDIMENT BASIN

A barrier, dam, or retention or detention basin located and designed in such a way as to retain rock, sand, gravel, silt, or other material transported by water during construction.

SEDIMENT POLLUTION

The placement, discharge, or any other introduction of sediment into the waters of the commonwealth.

SEDIMENTATION

The process by which mineral or organic matter is accumulated or deposited by the movement of water or air.

SEEPAGE PIT/SEEPAGE TRENCH

An area of excavated earth filled with loose stone or similar coarse material into which surface water is directed for infiltration into the underground water.

SEPARATE STORM SEWER SYSTEM

A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains) primarily used for collecting and conveying stormwater runoff.

SHALLOW CONCENTRATED FLOW

Stormwater runoff flowing in shallow, defined ruts prior to entering a defined channel or waterway.

SHEET FLOW

A flow process associated with broad, shallow water movement on sloping ground surfaces that is not channelized or concentrated.

SOIL COVER COMPLEX METHOD

A method of runoff computation developed by NRCS that is based on relating soil type and land use/cover to a runoff parameter called curve number (CN).

SOURCE WATER PROTECTION AREAS (SWPA)

The zone through which contaminants, if present, are likely to migrate and reach a drinking water well or surface water intake.

SPECIAL PROTECTION SUBWATERSHEDS

Watersheds that have been designated by DEP as EV or HQ waters.

SPILLWAY

A conveyance that is used to pass the peak discharge of the maximum design storm that is controlled by the stormwater facility.

STATE WATER QUALITY REQUIREMENTS

The regulatory requirements to protect, maintain, reclaim, and restore water quality under Title 25 of the Pennsylvania Code and the Clean Streams Law.

STORAGE INDICATION METHOD

A reservoir routing procedure based on solution of the continuity equation (inflow minus outflow equals the change in storage) with outflow defined as a function of storage volume and depth.

STORM FREQUENCY

The number of times that a given storm "event" occurs or is exceeded on the average in a stated period of years (see "return period").

STORM SEWER

A system of pipes and/or open channels that conveys intercepted runoff and stormwater from other sources but excludes domestic sewage and industrial wastes.

STORMWATER

Drainage runoff from the surface of the land resulting from precipitation or snow or ice melt.

STORMWATER CONTROL MEASURE

Physical features used to effectively control, minimize, and treat stormwater runoff. Also may be referred to as Stormwater Management Practice (SMP). [See Best Management Practice (BMP)].

STORMWATER MANAGEMENT DISTRICT

Those subareas of a watershed in which some type of detention is required to meet the plan requirements and the goals of Act 167.

STORMWATER MANAGEMENT FACILITY

Any structure, natural or man-made, that, due to its condition, design, or construction, conveys, stores, or otherwise affects stormwater runoff quality, rate, or quantity, ***including Best Management Practices and Stormwater Control Measures***. Typical stormwater management facilities include, but are not limited to: detention and retention basins, open channels, storm sewers, pipes, and infiltration facilities.

STORMWATER MANAGEMENT PLAN

The watershed plan, known as the "Darby and Cobbs Creeks Watershed Act 167 Stormwater Management Plan," for managing those land use activities that will influence stormwater runoff quality and quantity and that would impact the Darby and Cobbs Creeks watershed adopted by Delaware

County, Chester County, Montgomery County and Philadelphia County as required by the Act of October 4, 1978, P.L. 864 (Act 167).

STORMWATER MANAGEMENT SITE PLAN

The plan prepared by the developer or his representative indicating how stormwater runoff will be managed at the development site in accordance with this Ordinance. Stormwater Management Site Plan will be designated as SWM Site Plan throughout this Ordinance..

STREAM

A natural watercourse.

STREAM BUFFER

The land area adjacent to each side of a stream essential to maintaining water quality (see "buffer").

STREAM ENCLOSURE

A bridge, culvert, or other structure in excess of 100 feet in length upstream to downstream which encloses a regulated water of the commonwealth.

SUBAREA (SUBWATERSHED)

The smallest drainage unit of a watershed for which stormwater management criteria have been established in the stormwater management plan.

SUBDIVISION

As defined in The Pennsylvania Municipalities Planning Code, Act of July 31, 1968, P.L. 805, No. 247; The division or redivision of a lot, tract, or parcel of land by any means into two or more lots, tracts, parcels, or other divisions of land including changes in existing lot lines for the purpose, whether immediate or future, of lease, partition by the court for distribution to heirs or devisees, transfer of ownership, or building or lot development; provided, however, that the subdivision by lease of land for agricultural purposes into parcels of more than 10 acres not involving any new street or easement of access or any residential dwelling shall be exempted.

SURFACE WATERS OF THE COMMONWEALTH

Any and all rivers, streams, creeks, rivulets, ditches, watercourses, storm sewers, lakes, dammed water, wetlands, ponds, springs, and all other bodies or channels of conveyance of surface waters, or parts thereof, whether natural or artificial, within or on the boundaries of the commonwealth.

SWALE

A low-lying stretch of land that gathers or carries surface water runoff.

TIMBER OPERATIONS

See "Forest Management."

TIME-OF-CONCENTRATION (T_c)

The time required for surface runoff to travel from the hydraulically most distant point of the watershed

to a point of interest within the watershed. This time is the combined total of overland flow time and flow time in pipes or channels, if any.

TOP-OF-BANK

Highest point of elevation in a stream channel cross section at which a rising water level just begins to flow out of the channel and over the floodplain.

UNDEVELOPED CONDITION

Natural condition (see also "predevelopment condition").

USDA

United States Department of Agriculture

VERNAL POND

Seasonal depressional wetlands that are covered by shallow water for variable periods from winter to spring but may be completely dry for most of the summer and fall.

WATERCOURSE

A channel or conveyance of surface water having a defined bed and banks, whether natural or artificial, with perennial or intermittent flow.

WATERS OF THIS COMMONWEALTH

Any and all rivers, streams, creeks, rivulets, impoundments, ditches, watercourses, storm sewers, lakes, dammed water, wetlands, ponds, springs, and all other bodies or channels of conveyance of surface and underground water, or parts thereof, whether natural or artificial, within or on the boundaries of this Commonwealth.

WATERSHED

Region or area drained by a river, watercourse, or other surface water of this Commonwealth.

WELLHEAD

- A. A structure built over a well;
- B. The source of water for a well.

WELLHEAD PROTECTION AREA

The surface and subsurface area surrounding a water supply well, well field, or spring supplying a public water system through which contaminants are reasonably likely to move toward and reach the water source.

WET BASIN

Pond for urban runoff management that is designed to detain urban runoff and always contains water.

WETLAND

Areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions, including swamps, marshes, bogs, and similar areas.

WOODS

A natural ground cover with more than one viable tree of a DBH of six inches or greater per 1,500 square feet which existed within three years of application; a cover condition for which SCS curve numbers have been assigned or to which equivalent rational method runoff coefficients have been assigned.

§ 78-25 General Requirements.

For any of the activities regulated by this article, the preliminary or final approval of subdivision and/or land development plans, the issuance of any building or occupancy permit, or the commencement of any earth disturbance activity may not proceed until the property owner or applicant or his/her agent has received written approval of a drainage plan from Haverford Township and an adequate erosion and sediment control plan review by the Conservation District.

§ 78-26 ~~Drainage~~ *SWM site plan* contents.

The drainage plan shall consist of a general description of the project including sequencing items described in § **78-35** [Nonstructural project design (sequencing to minimize stormwater impacts)], calculations, maps, and plans. A note on the maps shall refer to the associated computations and erosion and sediment control plan by title and date. The cover sheet of the computations and erosion and sediment control plan shall refer to the associated maps by title and date. All *SWM site plan* ~~drainage plan~~ materials shall be submitted to Haverford Township in a format that is clear, concise, legible, neat, and well organized; otherwise, the drainage plan shall not be accepted for review and shall be returned to the applicant. The following items shall be included in the drainage plan:

A. General.

1. General description of the project including those areas described in § **78-35** [Nonstructural project design (sequencing to minimize stormwater impacts)].
2. General description of proposed permanent stormwater management techniques, including construction specifications of the materials to be used for stormwater management facilities.
3. Complete hydrologic, hydraulic, and structural computations for all stormwater management facilities.
4. An erosion and sediment control plan, including all reviews and letters of adequacy from the Conservation District.
5. A general description of proposed nonpoint source pollution controls.

6. A justification must be included in the SWM Site Plan if BMPs other than green infrastructure methods and LID practices are proposed to achieve the volume, rate, and water quality controls under this Ordinance.

7. The Drainage Plan Application and completed fee schedule form and associated fee (Appendix C-1).

8. The Drainage Plan Checklist (Appendix C-2).

B. ~~Maps and site plans~~ ***or Plan Sheets***. Map(s) ***or plan sheets*** of the project area shall be submitted on twenty-four-inch by thirty-six-inch sheets and/or shall be prepared in a form that meets the requirements for recording at the offices of the Recorder of Deeds of Delaware County. If the SALDO has more stringent criteria than this article, then the more stringent criteria shall apply. The contents of the map(s) shall include, but not be limited to:

1. The location of the project relative to highways, municipal boundaries, or other identifiable landmarks.
2. Existing contours at intervals of two feet.
3. Existing streams, lakes, ponds, or other waters of the commonwealth within the project area.
4. Other physical features including flood hazard boundaries, stream buffers, existing drainage courses, areas of natural vegetation to be preserved, and the total extent of the upstream area draining through the site.
5. The locations of all existing and proposed utilities, sanitary sewers, and water lines within 50 feet of property lines.
6. An overlay showing soil names and boundaries.
7. Limits of earth disturbance, including the type and amount of impervious area that would be added.
8. Proposed structures, roads, paved areas, and buildings.
9. Final contours at intervals of two feet.
10. The name of the development, the name and address of the owner of the property, and the name of the individual or firm preparing the plan.
11. The date of submission.
12. A graphic and written scale of one inch equals no more than 50 feet; for tracts of 20 acres or more, the scale shall be one inch equals no more than 100 feet.

13. A north arrow.
14. The total tract boundary and size with distances marked to the nearest foot and bearings to the nearest degree.
15. Existing and proposed land use(s).
16. A key map showing all existing man-made features beyond the property boundary that would be affected by the project.
17. Location of all open channels.
18. Overland drainage patterns and swales.
19. A fifteen-foot-wide access easement around all stormwater management facilities that would provide ingress to and egress from a public right-of-way.
20. The location of all erosion and sediment control facilities.
21. A note on the plan indicating the location and responsibility for maintenance of stormwater management facilities that would be located off site. All off-site facilities shall meet the performance standards and design criteria specified in this article
22. A statement, signed by the applicant, acknowledging that any revision to the approved drainage plan must be approved by Haverford Township, and that a revised erosion and sediment control plan must be submitted to the Conservation District for a determination of adequacy.
- 23. ~~The following signature block for the design engineer.~~ *The following signature block signed and sealed by the qualified Licensed Professional responsible for the preparation of the SWM site plan:***

"I, (Licensed Professional), on this date (date of signature), hereby certify that the drainage plan meets all design standards and criteria of the Haverford Township Stormwater Management Code."

24. The following signature block for the Municipality:

“On behalf of Haverford Township, (Municipal Official or Designee), on this date (date of signature), has reviewed and hereby certifies to the best of my knowledge that the SWM Site Plan meets all design standards and criteria of the Haverford Township Stormwater Management Ordinance.”

C. Supplemental information to be submitted to Haverford Township.

1. A written description of the following information shall be submitted by the applicant and shall include:

- a. The overall stormwater management concept for the project designed in accordance with § 78-35, Nonstructural project design (sequencing to minimize stormwater impacts).
 - b. Stormwater runoff computations as specified in this article.
 - c. Stormwater management techniques to be applied both during and after development.
 - d. Expected project time schedule.
 - e. Development stages or project phases, if so proposed.
 - f. An operations and maintenance plan in accordance with § 78-48, Responsibilities for operations and maintenance of stormwater controls and BMPs of this article.
2. An erosion and sediment control plan.
 3. A description of the effect of the project (in terms of runoff volumes and peak flows) on adjacent properties and on any existing municipal stormwater collection system that may receive runoff from the project site.
 4. A declaration of adequacy and highway occupancy permit from the Pennsylvania Department of Transportation (PennDOT) District office when utilization of a PennDOT storm drainage system is proposed.

D. Stormwater management facilities.

1. All stormwater management facilities must be located on a plan and described in detail.
2. ~~When infiltration measures such as seepage pits, beds or trenches are used, the locations of existing and proposed septic tank infiltration areas and wells must be shown.~~ ***The locations of existing and proposed septic tank infiltration areas and wells must be shown.***
3. All calculations, assumptions, and criteria used in the design of the stormwater management facilities must be shown.

§ 78-27 **Plan submission.**

Haverford Township shall require receipt of a complete drainage plan, as specified in this article.

- A. Proof of application or documentation of required permit(s) or approvals for the programs listed below shall be part of the plan:
 1. NPDES permit for stormwater discharges from construction activities.
 2. DEP joint permit application.
 3. PennDOT highway occupancy permit.

4. Chapter 105 (Dam Safety and Waterway Management).
 5. Chapter 106 (Floodplain Management).
 6. Any other permit under applicable state or federal regulations.
- B. The plan shall be coordinated with the state and federal permit process and the municipal SALDO review process. The process implementing the provisions in this article is illustrated in Appendixes D-1 and D-2.
 - C. For projects that require SALDO approval, the drainage plan shall be submitted by the applicant as part of the preliminary plan submission where applicable for the regulated activity.
 - D. For regulated activities that do not require SALDO approval, see **§ 78-26**, General drainage plan requirements.
 - E. Six (6) copies of the drainage plan shall be submitted and distributed as follows:
 1. Two copies to Haverford Township accompanied by the requisite municipal review fee, as specified in this article.
 2. Two copies to the County Conservation District.
 3. One copy to the municipal Engineer.
 4. One copy to the County Planning Commission/Department.
 - F. Any submissions to the agencies listed above that are found to be incomplete shall not be accepted for review and shall be returned to the applicant with a notification in writing of the specific manner in which the submission is incomplete.

§ 78-28 ~~Drainage~~ *Stormwater Management (SWM) Site Plan Review.*

- A. The municipal Engineer shall review the drainage plan for consistency with this article and the respective Act 167 stormwater management plan. Any plan found incomplete shall not be accepted for review and shall be returned to the applicant.
- B. The municipal Engineer shall review the drainage plan for any subdivision or land development against the municipal SALDO provisions not otherwise superseded by this article.
- C. The Conservation District, in accordance with established criteria and procedures, shall review the drainage plan for consistency with stormwater management and erosion and sediment pollution control requirements and provide comments to Haverford Township. ~~Such comments shall be considered by Haverford Township prior to final approval of the drainage plan.~~ ***The applicant shall respond to the Conservation District comments on the SWM site plan prior to being considered for final approval by the Township.***

- D. For activities regulated by this article, the municipal Engineer shall notify the applicant and Haverford Township in writing whether the drainage *SWM site* plan is consistent with the stormwater management plan *ordinance*.
- (1) If the municipal Engineer determines that the drainage *SWM site* plan is consistent with the stormwater management plan *ordinance*, the municipal Engineer shall forward a letter of consistency to the ~~municipal Secretary~~ *Township* who will then forward a copy to the applicant.
- (2) If the municipal Engineer determines that the drainage plan is inconsistent or noncompliant with the stormwater management plan *ordinance*, the municipal Engineer shall forward a letter to the ~~municipal Secretary~~ *Township* with a copy to the applicant citing the reason(s) and specific Code sections for the inconsistency or noncompliance. Inconsistency or noncompliance may be due to inadequate information to make a reasonable judgment as to compliance with the stormwater management plan. Any drainage plans that are inconsistent or noncompliant may be revised by the applicant and resubmitted when consistent with this article.
- E. For regulated activities specified in § 78-17, Applicability and Regulated Activities of this article that require a building permit, the municipal Engineer shall notify the municipal Building Permit Officer in writing whether the drainage plan is consistent with the stormwater management plan. The municipal Building Permit Officer shall forward a copy of the consistency/inconsistency letter to the applicant. Any drainage plan deemed inconsistent may be revised by the applicant and resubmitted consistent with this article.
- F. For regulated activities under this article that require an NPDES permit application, the applicant shall forward a copy of the Township Engineer's letter stating that the drainage plan is consistent with the stormwater management plan to the Conservation District. DEP and the Conservation District may consider the Township Engineer's review comments in determining whether to issue a permit.
- G. Haverford Township shall not grant preliminary or final approval to any subdivision or land development for regulated activities specified in § 78-17, Applicability and Regulated Activities of this article if the drainage plan has been found by the Township Engineer to be inconsistent with the stormwater management plan. All required permits from DEP must be obtained prior to approval of any subdivision or land development.
- H. No building permits for any regulated activity specified in § 78-17, Applicability and Regulated Activities of this article shall be approved by Haverford Township if the drainage plan has been found to be inconsistent with the stormwater management plan, as determined by the Township Engineer and Conservation District, or without considering the comments of the Township Engineer and Conservation District. All required permits from DEP must be obtained prior to issuance of a building permit.
- I. The Applicant shall be responsible for completing record drawings of all stormwater management facilities included in the approved drainage plan. The record drawings and an explanation of any discrepancies with the design plans shall be submitted to the Township Engineer for final approval. In no case shall Haverford Township approve the record drawings until Haverford Township receives a copy of an approved declaration of adequacy and/or highway occupancy permit from the PennDOT

District office, NPDES permit, and any other applicable permits or approvals from DEP or the Conservation District. The above permits and approvals must be based on the record drawings.

- J. Haverford Township's approval of a drainage plan shall be valid for a period not to exceed five years commencing on the date that Haverford Township signs the approved drainage plan. If stormwater management facilities included in the approved drainage plan have not been constructed, or if constructed, record drawings of these facilities have not been approved within this five-year time period, then Haverford Township may consider the drainage plan inconsistent or noncompliant and may revoke any and all permits. Drainage plans that are determined to be inconsistent or noncompliant by Haverford Township shall be resubmitted in accordance with § 78-30, Resubmission of Inconsistent or Noncompliant Drainage Plans of this article.

§ 78-29 ~~Modification~~ **Revision of Plans.**

- A. A modification to a submitted drainage plan under review by Haverford Township for a development site that involves the following shall require a resubmission to Haverford Township of a modified drainage plan consistent with § 78-26 of this article and be subject to review as specified in § 78-28 of this article:

- (1) Change in stormwater management facilities or techniques;
- (2) Relocation or redesign of stormwater management facilities; or
- (3) Is necessary because soil or other conditions are not as stated on the drainage plan as determined by the municipal Engineer.

- B. A ~~modification~~ **revision** to an already approved or inconsistent or noncompliant drainage plan shall be submitted to Haverford Township, accompanied by the applicable municipal review and inspection fee. A ~~modification~~ **revision** to a drainage plan for which a formal action has not been taken by Haverford Township shall be submitted to Haverford Township accompanied by the applicable municipal review and inspection fee.

§ 78-30 **Resubmission of inconsistent or noncompliant drainage plans.**

An inconsistent or noncompliant drainage plan may be resubmitted with the revisions addressing the Township Engineer's concerns documented in writing. It must be addressed to Haverford Township in accordance with § 78-27 contents of this article, distributed accordingly, and be subject to review as specified in § 78-28 of this article. The applicable Township review and inspection fee must accompany a resubmission of an inconsistent or noncompliant ~~drainage~~ **SWM** plan.

§78-31 **General Requirements for stormwater management.**

- A. Applicants proposing regulated activities in Haverford Township which do not fall under the exemption criteria shown in §78-18 shall submit a ~~drainage plan~~ **stormwater management site plan** consistent with this article **ordinance** and the respective ~~stormwater management plan~~ and **the applicable watershed stormwater management plan** to Haverford Township for review. The stormwater management criteria of this Ordinance shall apply to the total proposed development even if development is to take place in stages.

- ~~B. The applicant is required to find practicable alternatives to the surface discharge of stormwater, the creation of impervious surfaces, and the degradation of Waters of the Commonwealth and must maintain as much as possible the natural hydrologic regime. ***The applicant is required to design the site to minimize surface discharge of stormwater and the creation of impervious surfaces in order to maintain, as much as possible, the natural hydrologic regime.***~~
- C. The SWM site plan must be designed consistent with the sequencing provisions of §78-35 to ensure maintenance of the natural hydrologic regime, to promote groundwater recharge ***infiltration***, and to protect groundwater and surface water quality and quantity. The ~~drainage plan designer~~ ***SWM site plan designer*** must proceed sequentially in accordance with this Ordinance.
- D. ~~Stormwater drainage systems shall be designed in order to permit unimpeded flow along natural watercourses, except as modified by stormwater management facilities or open channels consistent with this ordinance.~~ ***Stormwater drainage systems shall be designed in order to preserve natural flow conditions to the maximum extent practicable.***
- E. ~~Existing points of concentrated discharge onto adjacent property shall not be altered in any manner which could cause property damage without permission of the affected property owner(s) and shall be subject to any applicable discharge criteria specified in this article.~~ ***Alteration of existing drainage discharge onto adjacent property shall only be proposed in accordance with PADEP guidance document “Chapter 102 Off-Site Discharges of Stormwater to Non-Surface Waters – Frequently Asked Questions (FAQ)” dated January 2, 2019, or latest guidance document from PADEP. Such discharge shall be subject to any applicable discharge criteria specified in this Ordinance and still must meet the requirements of Act 167.***
- F. Areas of existing diffused drainage discharge, whether proposed to be concentrated or maintained as diffused drainage areas, shall be subject to any applicable discharge criteria in the general direction of existing discharge, except as otherwise provided by this Ordinance. If diffused drainage discharge is proposed to be concentrated and discharged onto adjacent property, the Applicant must document that adequate downstream conveyance facilities exist to safely transport the concentrated discharge or otherwise prove that no erosion, sedimentation, flooding, or other impacts will result from the concentrated discharge.
- G. Where a development site is traversed by a stream, drainage easements shall be provided ~~conforming to the line of such streams~~ ***on either side of***, and conform to the line of such streams. The terms of the easement shall conform to the stream buffer requirements contained in §78-42.
- H. Any stormwater management facilities regulated by this article that would be located in or adjacent to waters of the commonwealth or delineated wetlands shall be subject to approval by DEP through the joint permit application or the environmental assessment approval process or, where deemed appropriate, by the DEP general permit process. When there is a question as to whether wetlands may be involved, it is the responsibility of the applicant or his agent to show that the land in question cannot be classified as wetlands; otherwise, approval to work in the area must be obtained from DEP
- I. Any proposed stormwater management facilities regulated by this article that would be located on state highway rights-of-way shall be subject to approval by PennDOT.
- J. Minimization of impervious surfaces and infiltration of runoff through seepage beds, infiltration trenches, etc., is encouraged where soil conditions permit in order to reduce the size or eliminate the need for detention facilities or other structural BMPs.

- K. All stormwater runoff from new development or redevelopment shall be pretreated for water quality prior to discharge to surface or groundwater. ***Rooftop runoff may go directly to an infiltration BMP or be evapotranspired.***
- L. All regulated activities within the Municipality shall be designed, implemented, operated, and maintained to meet the purposes of this Ordinance, through these two elements:
1. Erosion and sediment control during earth disturbance activities (e.g., during construction), and
 2. Water quality protection measures after completion of earth disturbance activities (i.e., after construction), including operations and maintenance.
- M. No regulated activity within the Municipality shall commence until the Municipality issues approval of a SWM plan, which demonstrates compliance with the requirements of this ordinance.
- N. The BMPs shall be designed, implemented, and maintained to meet state water quality requirements and any other more stringent requirements as determined by the Township. Applicants shall utilize the Pennsylvania Stormwater Best Management Practices Manual (PA BMP Manual), as amended, or other sources acceptable to the Township Engineer, for testing and design standards for BMPs, and where there is a conflict with the provisions of this Ordinance, the most restrictive applies.***
- O. Post-construction water quality protection shall be addressed as required by **§78-37**.
- P. Operations and maintenance of permanent stormwater BMPs shall be addressed as required by this article.
- Q. All BMPs used to meet the requirements of this Ordinance shall conform to the state water quality requirements and any more stringent requirements as set forth by Haverford Township.
- R. Techniques described in Appendix E (Low Impact Development) of this Ordinance shall be considered because they reduce the costs of complying with the requirements of this Ordinance and the state water quality requirements.
- S. In selecting the appropriate BMPs or combinations thereof, the Applicant shall consider the following:
1. Total contributing drainage area.
 2. Permeability and infiltration rate of the site's soils.
 3. Slope and depth to bedrock.
 4. Seasonal high water table.
 5. Proximity to building foundations and wellheads.
 6. Erodibility of soils.
 7. Land availability and configuration of the topography.
 8. Peak discharge and required volume control.
 9. Stream bank erosion.
 10. Efficiency of the BMPs to mitigate potential water quality problems.
 11. The volume of runoff that will be effectively treated.
 12. The nature of the pollutant being removed.
 13. Maintenance requirements.
 14. Creation/protection of aquatic and wildlife habitat.

15. Recreational value.

16. Enhancement of aesthetic and property values.

- R. The design of all stormwater management facilities shall incorporate sound engineering principles and practices in a manner that does not aggravate existing stormwater problems. The Township reserves the right to disapprove any design that would result in construction in or continuation of a stormwater problem area.**
- S. The applicant may meet the stormwater management criteria through off-site stormwater management measures as long as the proposed measures are in the same subwatershed as shown in Ordinance Appendix A.
- U. The following standards for protection of adjacent and downgradient properties from off-site conveyance must be accomplished:**

For any location where a new concentrated discharge of stormwater from any frequency rainfall event, up to and including the 100-year storm and the volume of runoff up to and including the 2-year storm onto or through adjacent property(ies) or downgradient property(ies), the following are required:

- 1. A drainage easement (or other legal agreement/approval) must be obtained for conveyance of discharges onto or through adjacent properties per the PADEP guidance document “Chapter 102 Off-Site Discharges of Stormwater to Non-Surface Wasters – Frequently Asked Questions (FAQ)” dated January 2, 2019, or latest guidance document from PADEP.**
- 2. The conveyance must be designed to avoid erosion, flooding, or other damage to the properties through which it is being conveyed.**

§ 78-32 Authorization to Construct and Term of Validity.

Haverford Township's approval of an SWM Site Plan authorizes the regulated activities contained in the SWM Site Plan for a maximum term of validity of 5 years following the date of approval. The Township may specify a term of validity shorter than 5 years in the approval for any specific SWM Site Plan. Terms of validity shall commence on the date the Municipality signs the approval for an SWM Site Plan. If an approved SWM Site Plan is not completed according to Section § 78-33, Permit requirements by other governmental entities; As-Built Plans, Completion Certificate, and Final inspection, within the term of validity, then the Municipality may consider the SWM Site Plan disapproved and may revoke any and all permits. SWM Site Plans that are considered disapproved by the Municipality shall be resubmitted in accordance with Section § 78-30 of this Ordinance.

§ 78-33 Permit requirements by other governmental entities.

The following permit requirements may apply to certain regulated earth disturbance activities and must be met prior to commencement of regulated earth disturbance activities, as applicable:

- A. All regulated earth disturbance activities subject to permit requirements by DEP under regulations at 25 Pennsylvania Code Chapter 102.
- B. Work within natural drainageways subject to permit by DEP under 25 Pennsylvania Code Chapter 105.
- C. Any stormwater management facility that would be located in or adjacent to surface waters of the commonwealth, including wetlands, subject to permit by DEP under 25 Pennsylvania Code Chapter 105.
- D. Any stormwater management facility that would be located on a state highway right-of-way or require access from a state highway shall be subject to approval by PennDOT.
- E. Culverts, bridges, storm sewers, or any other facilities which must pass or convey flows from the tributary area and any facility which may constitute a dam, subject to permit by DEP under 25 Pennsylvania Code Chapter 105.

§ 78-34 Erosion and sediment control during regulated earth disturbance activities.

- A. No regulated earth disturbance activities within Haverford Township shall commence until Haverford Township receives an approval from the Conservation District of an erosion and sediment control plan for construction activities.
- B. DEP has regulations that require an erosion and sediment control plan for any earth disturbance activity of 5,000 square feet or more, under 25 Pennsylvania Code § 102.4(b).
- C. In addition, under 25 Pennsylvania Code Chapter 92, a DEP "NPDES construction activities" permit is required for regulated earth disturbance activities. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate DEP regional office or County Conservation District

must be provided to Haverford Township.

- D. *Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate PA DEP regional office or County Conservation District must be provided to the Township. The issuance of an NPDES construction permit (or permit coverage under the statewide General Permit (PAG-2)) satisfies the requirements of §78-33.*
- E. A copy of the erosion and sediment control plan and any required permit, as required by DEP regulations, shall be available on the project site at all times.
- F. Additional erosion and sediment control design standards and criteria are recommended to be applied where infiltration BMPs are proposed. They shall include the following:
 - (1) Areas proposed for infiltration BMPs shall be protected from sedimentation and compaction during the construction phase to maintain maximum infiltration capacity.
 - (2) Infiltration BMPs shall not be constructed nor receive runoff until the entire drainage area contributory to the infiltration BMP has achieved final stabilization.

§ 78-35 Nonstructural project design (sequencing to minimize stormwater impacts).

- A. The design of all regulated activities shall include the following to minimize stormwater impacts.
 - (1) The applicant shall find practicable alternatives to the surface discharge of stormwater, such as those listed in Appendix F, Table F-5, the creation of impervious surfaces, and the degradation of waters of the commonwealth and must maintain as much as possible the natural hydrologic regime of the site.
 - (2) *The applicant shall apply Low Impact Development (LID) methods such as those listed in Appendix ____, provided that use of this method does not conflict with other local codes.*
 - (3) An alternative is practicable if it is available and capable of implementation after taking into consideration existing technology and logistics in light of overall project purposes and other municipal requirements.
 - (4) All practicable alternatives to the discharge of stormwater are presumed to have less adverse impact on quantity and quality of waters of the commonwealth unless otherwise demonstrated.
- B. The applicant shall demonstrate that the regulated activities were designed in the following sequence. The goal of the sequence is to minimize the increases in stormwater runoff and impacts to water quality resulting from the proposed regulated activity:
 - (1) Prepare an existing resource and site analysis map (ERSAM) showing environmentally sensitive areas, including but not limited to, steep slopes, ponds, lakes, streams, wetlands, hydric soils, vernal pools, stream buffers and hydrologic soil groups. Land development, any existing recharge areas, and other requirements outlined in the municipal SALDO shall also be included.

- (2) Establish a stream buffer according to § **78-42**.
- (3) Prepare a draft project layout avoiding sensitive areas identified in Subsection **B(1)**.
- (4) Identify site-specific existing conditions drainage areas, discharge points, recharge areas, and hydrologic soil groups A and B (areas conducive to infiltration).
- (5) Evaluate nonstructural stormwater management alternatives:
 - (a) Minimize earth disturbance.
 - (b) Minimize impervious surfaces.
 - (c) Break up large impervious surfaces.
- (6) Satisfy the groundwater recharge (infiltration) objective (§ **78-36**) and provide for stormwater pretreatment prior to infiltration.
- (7) Provide for water quality protection in accordance with § **78-37** water quality requirements.
- (8) Provide streambank erosion protection in accordance with § **78-38** streambank erosion requirements.
- (9) Determine into what management district the site falls (Appendix A) and conduct an existing conditions runoff analysis.
- (10) Prepare final project design to maintain existing conditions drainage areas and discharge points, to minimize earth disturbance and impervious surfaces and, to the maximum extent possible, to ensure that the remaining site development has no surface or point discharge.
- (11) Conduct a proposed conditions runoff analysis based on the final design that meets the management district requirements (§ **78-39**).
- (12) Manage any remaining runoff prior to discharge through detention, bioretention, direct discharge or other structural control.

§ 78-36 **Groundwater recharge.**

~~Maximizing the groundwater recharge capacity of the area being developed is required.~~ **Providing for infiltration consistent with the natural hydrologic regime is required.** Design of the infiltration facilities shall consider infiltration to compensate for the reduction in the recharge that occurs when the ground surface is disturbed or impervious surface is created. It is recommended that roof runoff be directed to infiltration BMPs that may be designed to compensate for the runoff from parking areas. These measures are required to be consistent with § **78-___** and to take advantage of utilizing any existing recharge areas. Infiltration may not be feasible on every site due to site-specific limitations such as soil type. ~~If it cannot be physically accomplished, then the design professional shall be responsible to show that this cannot be physically accomplished. If it can be physically accomplished, then the volume of runoff to be infiltrated shall be~~

determined from ~~§ 78-34A(2)~~ depending on demonstrated site conditions and shall be the greater of the volumes.

If it cannot be physically accomplished, then the design professional shall be responsible for demonstrating to the satisfaction of the municipality that this cannot be physically accomplished on the site (e.g., shallow depth to bedrock or limiting zone, open voids, steep slopes, etc. per the PA BMP Manual. A financial hardship as defined in §78-24 is not acceptable to avoid implementing infiltration facilities. If infiltration can be physically accomplished, the volume of runoff to be infiltrated shall be determined from §78-___ depending on demonstrated site conditions, and shall be the greatest volume that can be physically infiltrated or alternative methods consistent with the PA BMP Manual (as amended) or other PADEP guidance, such as the Managed Release Concept, may be used to manage this volume with approval from the Municipal Engineer. For example:

- *Any applicant (developer or redeveloper) shall first attempt to infiltrate the volume required in §78-36.A(2)[a].*
- *If the §78-36.A(2)[a] requirement cannot be physically accomplished, then the applicant is required to attempt to infiltrate the volume required in §78-36.A(2)[b].*
- *Finally, if the §78-36.A(2)[b] infiltration volume cannot be physically accomplished, the applicant must, at a minimum, infiltrate the volume required in §78-36.A(2)[c].*

A. Infiltration BMPs shall meet the following minimum requirements:

1. Infiltration BMPs intended to receive runoff from developed areas shall be selected based on suitability of soils and site conditions and shall be constructed on soils that have the following characteristics:
 - a. A minimum depth of 24 inches between the bottom of the BMP and the top of the limiting zone **unless bioretention is used.**
 - b. An infiltration rate sufficient to accept the additional stormwater load and dewater completely as determined by field tests conducted by the applicant's design professional.
 - c. The infiltration facility shall be capable of completely infiltrating the retention (infiltration) volume (Rev) below grade within four days (96 hours).
 - d. Pretreatment shall be provided prior to infiltration.
2. The size of the infiltration facility shall be based upon the following volume criteria:

~~B. Net two-year volume approach. In HQ/EV watersheds, the retention (infiltration) volume (Rev) to be captured and infiltrated shall be the net two-year volume. The net two-year volume shall be determined by plotting the two-year project site postdevelopment hydrograph, drawing a straight line from the point of inflection of the rising limb of the hydrograph to the predevelopment two-year storm, and measuring the volume under the curve as shown in Figure 405.1.~~

~~C. e shall be determined by plotting the two-year project site postdevelopment hydrograph, drawing a straight line from the point of inflection of the rising limb of the hydrograph to the predevelopment~~

two-year storm, and measuring the volume under the curve as shown in Figure 405.1.

~~[Image]~~

- D. (b) — One inch from impervious surface. In other portions of the watershed that are not classified as HQ/EV, the retention (infiltration) volume (Rev) will be equal to capturing one inch of rainfall over all proposed impervious surfaces.

$$\text{Rev} = I * \text{impervious area square feet} @ 12 \text{ (inches)} = \text{cubic feet (cf)}$$

An asterisk (*) in equations denotes multiplication.

- E. (c) — Obtaining the Rev volume in § 78-34A(2)(a), above, may not be feasible on every site due to site specific limitations such as soil type. If it cannot be physically accomplished, then the design professional shall be responsible for showing that this cannot be physically accomplished. If it cannot be physically accomplished, then the retention (infiltration) volume Rev required shall be as much as can be physically accomplished with a minimum of 0.50 inch depending on demonstrated site conditions. It has been determined that capturing and infiltrating 0.50 inch of runoff from the impervious areas will aid in maintaining the hydrologic regime (baseflow) of the watershed. If the goals of § 78-34A(2)(a) or (b) cannot be achieved, then 0.50 inch of rainfall shall be retained and infiltrated from all impervious areas.

The minimum recharge volume (Rev) required would, therefore, be computed as:

$$\text{Rev} * \text{impervious area (square feet)} @ 12 \text{ (inches)} = \text{cubic feet (cf)}$$

An asterisk (*) in equations denotes multiplication.

Where:

- I = The maximum equivalent infiltration amount (inches) that the site can physically accept or 0.50 inch, whichever is greater.

The retention volume values derived from the methods in § 78-34A(2)(a), is the minimum volume the applicant must control through an infiltration BMP facility. However, if a site has areas of soils where additional volume of retention can be achieved, the applicant is encouraged to infiltrate as much of the stormwater runoff from the site as possible.

If the minimum of 0.50 inch of infiltration requirement cannot be achieved, a waiver from Section 405, Groundwater Recharge, would be required from Haverford Township.

- a. Modified Control Guideline One (MCG-1) of the PA BMP Manual – The retention (infiltration) volume (Rev) to be captured and infiltrated shall be the net 2-year 24-hour volume. The net volume is the difference between the post-development runoff volume and the pre-development runoff volume. The post-development total runoff volume for all storms equal to or less than the 2-year 24-hour duration precipitation shall not be increased. For modeling purposes, existing (pre-development) non-forested pervious areas must be considered meadow in good condition or its equivalent, and twenty (20) percent of existing impervious area, when present, shall be considered meadow in good condition.*

- b. Infiltrating the entire Re_v volume in Section §78-36.A(2)[a] (above) may not be feasible on every site due to site-specific limitations such as shallow depth to bedrock or the water table. If it cannot be physically accomplished, then the following criteria from Modified Control Guideline Two (MCG-2) of the PA BMP Manual must be satisfied:*

At least the first one-inch (1.0") of runoff from new or replacement impervious surfaces shall be infiltrated.

$$Re_v = 1 \text{ (inch)} * \text{impervious area (square feet)} \div 12 \text{ (inches)} = \text{cubic feet (cf)}$$

An asterisk () in equations denotes multiplication.*

- c. Only if infiltrating the entire Re_v volume in §78-36.A(2)[b] cannot be physically accomplished, then the following minimum criteria from Modified Control Guideline Two (MCG-2) of the PA BMP Manual must be satisfied:*

Wherever possible, infiltration facilities should be designed to accommodate infiltration of the entire water quality volume (WQ_v) in §78-36.A(2)[a]; however, in all cases at least the first one-half inch (0.5") of the WQ_v shall be infiltrated. The minimum infiltration volume (Re_v) required would, therefore, be computed as:

$$Re_v = I * \text{impervious area (square feet)} \div 12 \text{ (inches)} = \text{cubic feet (cf)}$$

An asterisk () in equations denotes multiplication.*

Where:

I = The maximum equivalent infiltration amount (inches) that the site can physically accept or 0.50 inch, whichever is greater.

The retention volume values derived from the methods in §78-36.A(2)[a], §78-36.A(2)[b], or §78-36.A(2)[c] is the minimum volume the Applicant must control through an infiltration BMP facility. If site conditions preclude capture of runoff from portions of the impervious area, the infiltration volume for the remaining area should be increased an equivalent amount to offset the loss.

Only if the minimum of 0.50 inch of infiltration requirement cannot be physically accomplished, a waiver from §78-36 Infiltration Volume Requirements is required from the Municipality.

- F. Soils. A detailed soils evaluation of the project site shall be required to determine the suitability of infiltration facilities. The evaluation shall be performed by a qualified design professional and at a minimum address soil permeability, depth to bedrock, and subgrade stability. The general process for designing the infiltration BMP shall be:

1. Analyze hydrologic soil groups as well as natural and man-made features within the site to

determine general areas of suitability for infiltration practices. In areas where development on fill material is under consideration, conduct geotechnical investigations of subgrade stability; infiltration may not be ruled out without conducting these tests.

- ~~2. Provide field tests such as double ring infiltrometer or hydraulic conductivity tests (at the level of the proposed infiltration surface) to determine the appropriate hydraulic conductivity rate. If approved, percolation tests may be used for design purposes.~~ ***Provide field tests such as required in the PA BMP Manual.***
3. Design the infiltration structure for the required retention (Rev) volume based on field-determined capacity at the level of the proposed infiltration surface.
4. If on-lot infiltration structures are proposed by the applicant's design professional, it must be demonstrated to Haverford Township that the soils are conducive to infiltrate on the lots identified.

C. Stormwater hotspots.

- (1) Below is a list of examples of designated hotspots. If a site is designated as a hotspot, it has important implications for how stormwater is managed. First and foremost, untreated stormwater runoff from hotspots shall not be allowed to recharge into groundwater where it may contaminate water supplies. Therefore, the ~~Rev~~ ***groundwater recharge*** requirement shall NOT be applied to development sites that fit into the hotspot category (the entire WQv must still be treated). Second, a greater level of stormwater treatment shall be considered at hotspot sites to prevent pollutant wash off after construction. The Environmental Protection Agency's (EPA) NPDES stormwater program requires some industrial sites to prepare and implement a stormwater pollution prevention plan. ***Stormwater runoff from hotspots shall be pretreated prior to surface or groundwater infiltration to prevent pollutant runoff. Industrial sites referenced in 40 CFR 125 are examples of hotspots.***

(a) Examples of hotspots:

Vehicle salvage yards and recycling facilities
Vehicle fueling stations
Vehicle service and maintenance facilities
Vehicle and equipment cleaning facilities
Fleet storage areas (bus, truck, etc.)
Industrial sites based on Standard Industrial Codes
Marinas (service and maintenance)
Outdoor liquid container storage
Outdoor loading/unloading facilities
Public works storage areas
Facilities that generate or store hazardous materials
Commercial container nursery
Contaminated sites/brownfields

Other land uses and activities as designated by an appropriate review authority

(b) The following land uses and activities are not normally considered hotspots:

Residential streets and rural highways

Residential development

Institutional development

Office developments

Nonindustrial rooftops

Pervious areas, except golf courses and nurseries [which may need an integrated pest management (IPM) plan].

(2) While large highways [average daily traffic volume (ADT) greater than 30,000] are not designated as stormwater hotspots, it is important to ensure that highway stormwater management plans adequately protect groundwater.

(3) *The Environmental Protection Agency's (EPA) NPDES stormwater program requires some industrial sites to prepare and implement a stormwater pollution prevention plan.*

G. Infiltration facilities should, to the greatest extent practicable, be located to avoid introducing contaminants via groundwater, and be in conformance with an approved source water protection assessment or source water protection plan.

H. Roadway drainage systems should provide an opportunity to capture accidental spills. Road de-icing material storage facilities shall be designed to avoid salt and chloride runoff from entering waterways and infiltration facilities. The qualified design professional shall evaluate the possibility of groundwater contamination from the proposed infiltration facility and perform a hydrologic justification study if possible.

I. Extreme caution shall be exercised where infiltration is proposed in SWPAs as defined by the local municipality or water authority.

J. Infiltration facilities shall be used in conjunction with other innovative or traditional BMPs, stormwater control facilities, and nonstructural stormwater management alternatives.

K. Extreme caution shall be exercised where salt or chloride (municipal salt storage) would be a pollutant since soils do little to filter this pollutant, and it may contaminate the groundwater. The qualified design professional shall evaluate the possibility of groundwater contamination from the proposed infiltration facility and perform a hydrogeologic justification study if necessary.

L. The antidegradation analysis found in Chapter 93 shall be applied in HQ or EV streams.

M. An impermeable liner will be required in detention basins where the possibility of groundwater contamination exists. A detailed hydrogeologic investigation may be required by Haverford Township.

N. Haverford Township shall require the applicant to provide safeguards against groundwater contamination for land uses that may cause groundwater contamination should there be a mishap or spill.

§ 78-37 Water quality requirements.

The applicant shall comply with the following water quality requirements of this article.

- A. No regulated earth disturbance activities within Haverford Township shall commence until approval by Haverford Township of a plan which demonstrates compliance with postconstruction state water quality requirements.
- B. The BMPs shall be designed, implemented, and maintained to meet state water quality requirements and any other more stringent requirements as determined by Haverford Township.
- C. ~~To control postconstruction stormwater impacts from regulated earth disturbance activities, state water quality requirements can be met by BMPs, including site design, which provide for replication of preconstruction stormwater infiltration and runoff conditions so that postconstruction stormwater discharges do not degrade the physical, chemical, or biological characteristics of the receiving waters. As described in the DEP Comprehensive Stormwater Management Policy (No. 392-0300-002, September 28, 2002), this may be achieved by the following~~ ***To control post-construction stormwater impacts from regulated activities and conform to state water quality requirements, BMPs which replicate pre-development stormwater infiltration and runoff conditions must be provided in the site design such that post-construction stormwater discharges do not degrade the physical, chemical, or biological characteristics of the receiving waters. The green infrastructure and Low Impact Development (LID) practices provided in the PA BMP Manual, as well as the guidance on green infrastructure and LID provided in Appendix E shall be utilized for all regulated activities wherever possible. This may be achieved by the following:***
- (1) Infiltration: replication of preconstruction stormwater infiltration conditions;
 - (2) Treatment: use of water quality treatment BMPs to ensure filtering out of the chemical and physical pollutants from the stormwater runoff; and
 - (3) Streambank and streambed protection: management of volume and rate of postconstruction stormwater discharges to prevent physical degradation of receiving waters (e.g., from scouring).
- D. Developed areas shall provide adequate storage and treatment facilities necessary to capture and treat stormwater runoff. The ~~retention~~ ***infiltration*** volume computed under **§ 78-36** may be a component of the water quality volume if the applicant chooses to manage both components in a single facility. If the ~~retention~~ ***infiltration*** volume is less than the water quality volume, the remaining water quality volume may be captured and treated by methods other than infiltration BMPs. The required water quality volume (WQv) is the storage capacity needed to capture and treat a portion of stormwater runoff from the developed areas of the site.
- (1) To achieve this goal, the following criterion is established:

The following calculation formula is to be used to determine the water quality storage volume (WQv) in acre-feet of storage required by this article:

of storage required by this article:

this article:

$$WQv = [(P)(Rv)(A)] @ 12$$

WHERE:

WQv = Water quality volume (acre-feet)

P = 1-inch

A = Area of the project contributing to the water quality BMP (acres)

Rv = $0.05 + 0.009(I)$ where I is the percent of the area that is impervious surface ($\text{impervious area}/A * 100$)

- (b) This volume requirement can be accomplished by the permanent volume of a wet basin or the detained volume from other BMPs. Where appropriate, wet basins shall be utilized for water quality control and shall follow the guidelines of the BMP manuals referenced in Appendix G.
- (2) Release of water can begin at the start of the storm (i.e., the invert of the water quality orifice is at the invert of the facility). The design of the facility shall provide for protection from clogging and unwanted sedimentation.

on.

The Post-construction total runoff volume shall not exceed the Predevelopment total runoff volume for all storms equal to or less than the two-year, 24-hour duration precipitation (design storm). If the Township Engineer concurs that this criterion cannot be met, a minimum of one half (0.5)-inches of runoff from all Regulated Impervious Surfaces shall be managed. For modeling purposes, existing (pre-development) non-forested pervious areas must be considered meadow in good condition or its equivalent, and twenty (20) percent of existing impervious area, when present, shall be considered meadow in good condition.

This volume requirement can be managed by the permanent volume of a wet basin or the detained volume from other BMPs. Where appropriate, wet basins shall be utilized for water quality control and shall follow the guidelines of the PA BMP Manual referenced in Appendix G.

Release of water can begin at the the start of the storm (i.e. the invert of the water quality orifice is at the inver of the facility). The design of the facility shall provide for protection from clogging and unwanted sedimentation.

- E. For areas within defined special protection subwatersheds that include EV and HQ waters, the temperature and quality of water and streams shall be maintained through the use of temperature-sensitive BMPs and stormwater conveyance systems.
- F. To accomplish the above, the applicant shall submit original and innovative designs to the Township engineer for review and approval. Such designs may achieve the water quality objectives through a combination of different BMPs.
- G. ~~If a perennial or intermittent stream passes through the site, the applicant shall create a stream buffer extending a minimum of 50 feet to either side of the top of bank of the channel. The buffer area shall be maintained with and encouraged to use appropriate native vegetation (refer to Appendix H of the Pennsylvania Handbook of Best Management Practices for Developing Areas for plant lists). If the applicable rear or side yard setback is less than 50 feet, the buffer width may be reduced to 25% of the setback to a minimum of 10 feet. If an existing buffer is legally prescribed (i.e., deed, covenant, easement, etc.) and it exceeds the requirements of this article, the existing buffer shall be maintained. This does not include lakes or wetlands.~~
- H. *Evapotranspiration may be quantified and credited towards meeting volume requirements according to the PADEP Post Construction Stormwater Management (PCSM) Spreadsheet and Instructions (December 2020) or the most recent guidance from PADEP.*
- I. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate DEP regional office must be provided to Haverford Township.

§ 78-38 Streambank erosion requirements.

- A. In addition to the control of water quality volume (in order to minimize the impact of stormwater runoff on downstream streambank erosion), the primary requirement is to design a BMP to detain the proposed conditions two-year, twenty-four-hour design storm to the existing conditions one-year flow using the SCS Type II distribution. Additionally, provisions shall be made (such as adding a small orifice at the bottom of the outlet structure) so that the proposed conditions one-year storm takes a minimum of 24 hours to drain from the facility from a point where the maximum volume of water from the one-year storm is captured (i.e., the maximum water surface elevation is achieved in the facility). Release of water can begin at the start of the storm (i.e., the invert of the water quality orifice is at the invert of the facility).
- B. The minimum orifice size in the outlet structure to the BMP shall be three inches in diameter where possible, and a trash rack shall be installed to prevent clogging. On sites with small drainage areas contributing to this BMP that do not provide enough runoff volume to allow a twenty-four-hour attenuation with the three-inch orifice, the calculations shall be submitted showing this condition. Orifice sizes less than three inches can be utilized, provided that the design will prevent clogging of the intake.
- C. In "Conditional Direct Discharge Districts" (District C) only (see § 78-39), the objective is not to attenuate the storms greater than the two-year recurrence interval. This can be accomplished by configuring the outlet structure not to control the larger storms or by a bypass channel that diverts only

the two-year stormwater runoff into the basin or conversely, diverts flows in excess of the two-year storm away from the basin.

§ 78-39 Stormwater peak rate control and management districts.

- A. The Darby and Cobbs Creeks watershed has been divided into stormwater management districts as shown on the Management District Map in Appendix A. In addition to the requirements specified in Table 408.1 below, the erosion and sedimentation control (§ 78-34), the nonstructural project design (§ 78-35), the groundwater recharge (§ 78-36), the water quality (§ 78-37), and the streambank erosion (§ 78-38) requirements shall be implemented.
- (1) Standards for managing runoff from each subarea in the Darby and Cobbs Creeks watershed for the two-, five-, ten-, twenty-five-, fifty-, and one-hundred-year design storms are shown in Table 408.1. Development sites located in each of the management districts must control proposed conditions runoff rates to existing conditions runoff rates for the design storms in accordance with Table 408.1.

**TABLE 408.1
PEAK RATE CONTROL STANDARDS BY STORMWATER
MANAGEMENT DISTRICT IN THE
DARBY-COBBS CREEK WATERSHED**

District	Proposed Condition Design Storm	Existing Condition Design Storm
A	2 – year	1 – year
	5 – year	5 – year
	10 – year	10 – year
	25 – year	25 – year
	100 – year	100 – year
B-1	2 – year	1 – year
	10 – year	5 – year
	25 – year	10 – year
	50 – year	25 – year
	100 – year	100 – year
B-2	2 – year	1 – year
	5 – year	2 – year
	25 – year	5 – year
	50 – year	10 – year
	100 – year	100 – year
C	Conditional Direct Discharge District	

- (2) In District C, development sites that can discharge directly to the Darby-Cobbs Creek main channel, major tributaries, or indirectly to the main channel through an existing stormwater drainage system (i.e., storm sewer or tributary) may do so without control of the proposed conditions peak rate of runoff greater than the five-year storm. Sites in District C will still have to comply with the groundwater

recharge criteria, the water quality criteria, and streambank erosion criteria. If the proposed conditions runoff is intended to be conveyed by an existing stormwater drainage system to the main channel, assurance must be provided that such system has adequate capacity to convey the flows greater than the two-year existing conditions peak flow or will be provided with improvements to furnish the required capacity. When adequate capacity in the downstream system does not exist and will not be provided through improvements, the proposed conditions peak rate of runoff must be controlled to the existing conditions peak rate as required in District A provisions (i.e., ten-year proposed conditions flows to ten-year existing conditions flows) for the specified design storms.

- B. General. Proposed conditions rates of runoff from any regulated activity shall not exceed the peak release rates of runoff from existing conditions for the design storms specified on the Stormwater Management District Watershed Map (Appendix A) and this section of the article.
- C. District boundaries. The boundaries of the stormwater management districts are shown on an official map that is available for inspection at the municipal and County Planning offices. A copy of the official map at a reduced scale is included in Appendix A. The exact location of the stormwater management district boundaries as they apply to a given development site shall be determined by mapping the boundaries using the two-foot topographic contours (or most accurate data required) provided as part of the drainage plan.
- D. Sites located in more than one district. For a proposed development site located within two or more stormwater management district category subareas, the peak discharge rate from any subarea shall meet the management district criteria for which the discharge is located. The calculated peak discharges shall apply regardless of whether the grading plan changes the drainage area by subarea. An exception to the above may be granted if discharges from multiple subareas recombine in proximity to the discharge site. In this case, peak discharge in any direction may follow Management District A criteria, provided that the overall site discharge meets the management district criteria for which the discharge is located.
- E. Off-site areas. Off-site areas that drain through a proposed development site are not subject to release rate criteria when determining allowable peak runoff rates. However, on-site drainage facilities shall be designed to safely convey off-site flows through the development site.
- F. Site areas. Where the site area to be impacted by a proposed development activity differs significantly from the total site area, only the proposed impact area utilizing stormwater management measures shall be subject to the management district criteria. In other words, unimpacted areas bypassing the stormwater management facilities would not be subject to the management district criteria.
- G. "No harm" option. For any proposed development site not located in a Conditional Direct Discharge District, the applicant has the option of using a less-restrictive runoff control (including no detention) if the applicant can prove that "no harm" would be caused by discharging at a higher runoff rate than that specified by the stormwater management plan. The "no harm" option is used when an Applicant can prove that the proposed conditions hydrographs can match existing conditions hydrographs and if it can be proved that the proposed conditions will not cause increases in peaks at all points downstream. Proof of "no harm" must be shown based upon the following downstream impact evaluation which shall

include a downstream hydraulic capacity analysis consistent with Subsection **H** to determine if adequate hydraulic capacity exists. The applicant shall submit to Haverford Township this evaluation of the impacts due to increased downstream stormwater flows in the watershed.

- (1) The hydrologic regime of the site must be maintained.
 - (2) The downstream impact evaluation shall include hydrologic and hydraulic calculations necessary to determine the impact of hydrograph timing modifications due to the proposed development upon a dam, highway, structure, natural point of restricted streamflow, or any stream channel section established with the concurrence of the municipality.
 - (3) The evaluation shall continue downstream until the increase in flow diminishes due to additional flow from tributaries and/or stream attenuation.
 - (4) The peak flow values to be used for downstream areas for the design return period storms (two-, five-, ten-, fifty-, and one-hundred-year) shall be the values from the calibrated model for the respective watershed. These flow values can be obtained from the original Act 167 watershed stormwater management plans.
 - (5) Applicant-proposed runoff controls which would generate increased peak flow rates at storm drainage problem areas would, by definition, be precluded from successful attempts to prove "no-harm," except in conjunction with proposed capacity improvements for the problem areas consistent with Subsection **H**.
 - (6) Financial distress shall not constitute grounds for the municipality to approve the use of the "no-harm" option.
 - (7) Capacity improvements to conveyance facilities or obstructions may be provided as necessary to implement the "no harm" option as long as it can be demonstrated through the downstream hydraulic capacity analysis that the improvements would not create any harm downstream.
 - (8) Any "no harm" justifications shall be submitted by the applicant as part of the drainage plan submission per this article.
- H. Downstream hydraulic capacity analysis. Any downstream hydraulic capacity analysis conducted in accordance with this article shall use the following criteria for determining adequacy for accepting increased peak flow rates:
- (1) Natural or man-made channels or swales must be able to convey the increased runoff associated with a two-year return period event within their banks at velocities consistent with protection of the channels from erosion. Acceptable velocities shall be based upon criteria included in the DEP Erosion and Sediment Pollution Control Program Manual.
 - (2) Natural or man-made channels or swales must be able to convey increased twenty-five-year return period runoff without creating any hazard to persons or property.

- (3) Culverts, bridges, storm sewers, or any other facilities which need to pass or convey flows from the tributary area must be designed in accordance with DEP Chapter 105 regulations (if applicable) and, at minimum, pass the increased twenty-five-year return period runoff.
- (4) *Water quality requirements as defined in §78-37.*

(5) Post-construction peak rates shall not exceed the existing peak rates for the respective sub-area.

- I. Alternate criteria for redevelopment sites. For redevelopment sites, one of the following minimum design parameters shall be accomplished, whichever is most appropriate for the given site conditions as determined by Haverford Township;
 - (1) Meet the full requirements specified by Table 408.1 and Stormwater peak rate control and management districts, § 78-39 ; or
 - (2) Reduce the total *pre-development* impervious surface on the site by at least 20% based upon a comparison of existing impervious surface to ~~proposed~~ *regulated* impervious surface. *In this case, calculations must be provided that show the peak rate has not increased.*

§ 78-40 **Calculation Methodology.**

- A. Stormwater runoff from all development sites with a drainage area of greater than ~~200~~ *five (5)* acres shall be calculated using a generally accepted calculation technique that is based on the NRCS soil cover complex method. Table 409.1 summarizes acceptable computation methods, and the method selected by the design professional shall be based on the individual limitations and suitability of each method for a particular site.

Credits providing an automatic reduction in impervious area and a corresponding reduction in stormwater impacts for the reduction of design volume, peak rate, and channel protection are available for protecting existing trees as well as revegetating and reforestation as outlined in the PA DEP BMP Manual, for sites with earth disturbance of one (1) acre or greater. No more than 25% of the Volume Reduction may be met through Nonstructural BMP credits.

Haverford Township may allow the use of the Rational Method to estimate peak discharges from drainage areas that contain less than *five (5)* acres. ~~The soil cover complex method shall be used for drainage areas greater than 200 acres.~~ The use of the Rational *Method to estimate peak discharges for drainage areas greater than five (5) acres shall be permitted only upon approval of the Township engineer.*

**TABLE 409.1
ACCEPTABLE COMPUTATION METHODOLOGIES
FOR STORMWATER MANAGEMENT PLANS**

Method	Developed By	Applicability
--------	--------------	---------------

TABLE 409.1

TR-20 (or commercial computer package based on TR-20)	USDA NRCS	Applicable where use of full hydrology computer model is desirable or necessary.
TR-55 (or commercial computer package based on TR-55)	USDA NRCS	Applicable for land development plans where limitations described in TR-55.
HEC-1/HEC-HMS	US Army Corps of Engineers	Applicable where use of a full hydrologic computer is desirable or necessary.
PSRM	Penn State University	Applicable where use of a hydrologic model is desirable or necessary; simpler than TR-20 or HEC-1.
Rational method (or commercial computer package based on rational method)	Emil Kuichling (1889)	For sites less than 200 acres, or as approved by the municipality and/or municipal Engineer.
Other methods	Varies	Other computation methodologies approved by the municipality and/or municipal Engineer.
HEC RAS	US Army Corp of Engineers	"No harm" option

- B. All calculations consistent with this article using the soil cover complex method shall use the appropriate design rainfall depths for the various return period storms. ~~according to the region in which they are located as presented in Table F-1 in Appendix F of this article. If a hydrologic computer model such as PSRM or HEC-1/HEC-HMS is used for stormwater runoff calculations, then the duration of rainfall shall be 24 hours. The alternating block method shown in Figure F-1 or the SCS Type II S-Curve, Figure F-3 in Appendix F, shall be used for the rainfall distribution.~~ **Rainfall depths shall be according to NOAA Atlas 14 values consistent with a partial duration series. When stormwater calculations are performed for routing procedures or water quality functions, the duration of rainfall shall be twenty-four (24) hours.**
- C. The following criteria shall be used for runoff calculations:
- (1) For development sites not considered redevelopment, the ground cover used in determining the existing conditions flow rates shall be as follows:
 - (a) Wooded sites shall use a ground cover of "woods in good condition." Portions of a site having more than one viable tree of a DBH of six inches or greater per 1,500 square feet shall be considered "wooded" where such trees existed within three years of application.
 - (b) The undeveloped portion of the site including agriculture, bare earth and fallow ground, shall be considered as "meadow in good condition," unless the natural ground cover generates a lower curve (CN) number or Rational "c" value (i.e., woods) as listed in Tables F-2 or F-3 in Appendix F of this article.

- (2) For ~~development and~~ redevelopment sites, the ground cover used in determining the existing conditions flow rates for the developed portion of the site shall be based upon actual land cover conditions.
- D. ~~All calculations using the rational method shall use rainfall intensities consistent with appropriate times of concentration for overland flow and return periods presented in the Region 5 Curves from the PennDOT Storm Duration Frequency Chart (Figure F-4). Times of concentration for overland flow shall be calculated using the methodology presented in Chapter 3 of Urban Hydrology for Small Watersheds, NRCS, TR-55 (as amended or replaced from time to time by NRCS). Times of concentration for channel and pipe flow shall be computed using a minimum of 5 minutes.~~ ***All calculations using the Rational Method shall use rainfall intensities consistent with appropriate times of concentration (duration) and storm events with rainfall intensities obtained from NOAA Atlas 14 partial duration series estimates, or the latest version of the PennDOT Drainage Manual (PDM Publication 584). Times of concentration shall be calculated based on the methodology recommended in the respective model used. Times of concentration for channel and pipe flow shall be computed using a minimum of five (5) minutes.***
- E. Runoff curve numbers (CN) for both existing and proposed conditions to be used in the soil cover complex method shall be obtained from Table F-2 in Appendix F of this article.
- F. Runoff coefficients (c) for both existing and proposed conditions for use in the rational method shall be obtained from Table F-3 in Appendix F of this article.
- G. ~~Where uniform flow is anticipated, the Manning equation shall be used for hydraulic computations and to determine the capacity of open channels, pipes, and storm sewers.~~ ***Hydraulic computations to determine the capacity of pipes, culverts, and storm sewers shall be consistent with methods and computations contained in the Federal Highway Administration Hydraulic Design Series Number 5 (Publication No. FHWA-NHI-01-020 HDS No. 5). Hydraulic computations to determine the capacity of open channels shall be consistent with methods and computations contained in the Federal Highway Administration Hydraulic Engineering Circular Number 15 (Publication No. FHWA-BHI-05-114 HEC 15).*** Values for Manning's roughness coefficient (n) shall be consistent with Table F-4 in Appendix F.
- H. Outlet structures for stormwater management facilities shall be designed to meet the performance standards of this article using any generally accepted hydraulic analysis technique or method.
- I. The design of any stormwater detention facilities intended to meet the performance standards of this article shall be verified by routing the design storm hydrograph through these facilities using the storage-indication method. The design storm hydrograph shall be computed using a calculation method that produces a full hydrograph. Haverford Township may approve the use of any generally accepted full hydrograph approximation technique that shall use a total runoff volume that is consistent with the volume from a method that produces a full hydrograph.

§ 78-41 **Other requirements.**

- A. Any stormwater facility located on state highway rights-of-way shall be subject to approval by PennDOT.

- B. All wet basin designs shall incorporate biologic controls consistent with the West Nile Guidance found in Appendix H, *PADEP document 363-0300-001 “Design Criteria – Wetlands Replacement/Monitoring,”* or contact the Pennsylvania State Cooperative Wetland Center (www.wetlands.psu.edu/) or the Penn State Cooperative Extension Office (www.extension.psu.edu/extmap.html).
- C. Any stormwater management facility (i.e., detention basin) required or regulated by this article designed to store runoff and requiring a berm or earthen embankment shall be designed to provide an emergency spillway to handle flow up to and including the one-hundred-year proposed conditions. The height of embankment must provide a minimum 1.0 foot of freeboard above the maximum pool elevation computed when the facility functions for the one-hundred-year proposed conditions inflow. Should any stormwater management facility require a dam safety permit under DEP Chapter 105, the facility shall be designed in accordance with Chapter 105 and meet the regulations of Chapter 105 concerning dam safety. Chapter 105 may be required to pass storms larger than the one-hundred-year event.
- D. Any facilities that constitute water obstructions (e.g., culverts, bridges, outfalls, or stream enclosures) and any work involving wetlands governed by DEP Chapter 105 regulations (as amended or replaced from time to time by DEP) shall be designed in accordance with Chapter 105 and will require a permit from DEP.
- E. Any other drainage conveyance facility that does not fall under Chapter 105 regulations must be able to convey, without damage to the drainage structure or roadway, runoff from the twenty-five-year design storm with a minimum 1.0 foot of freeboard measured below the lowest point along the top of the roadway. Any facility that constitutes a dam as defined in DEP Chapter 105 regulations may require a permit under dam safety regulations. Any facility located within a PennDOT right-of-way must meet PennDOT minimum design standards and permit submission requirements. *The larger events (50 year and 100 year) must also be safely conveyed in the direction of natural flow without creating additional damage to any drainage structures, nearby structures, or roadways.*
- F. Any drainage conveyance facility and/or channel not governed by Chapter 105 regulations must be able to convey, without damage to the drainage structure or roadway, runoff from the twenty-five-year design storm. Conveyance facilities to or exiting from stormwater management facilities (i.e., detention basins) shall be designed to convey the design flow to or from that structure. Roadway crossings located within designated floodplain areas must be able to convey runoff from a one-hundred-year design storm. Any facility located within a PennDOT right-of-way must meet PennDOT minimum design standards and permit submission requirements.
- G. *Conveyance facilities transporting flow to or exiting from stormwater management facilities (i.e. detention basins) shall be designed to convey the 100-year frequency storm.*
- H. *Roadway crossings or structures located within designated floodplain areas must be able to convey runoff from a 100-year design storm consistent with FEMA Floodplain Management requirements.*
- I. Adequate erosion protection shall be provided along all open channels and at all points of discharge.

- J. The design of all stormwater management facilities shall incorporate sound engineering principles and practices. Haverford Township reserves the right to disapprove any design that would result in construction in or continuation of a stormwater problem area.

§78-42 Riparian Buffers

- A. *Except as required by Chapter 102, if a perennial or intermittent stream passes through, or a waterbody (i.e., lake, pond, wetland) is present on the site, the Applicant shall create a Riparian Buffer extending a minimum of 50 feet, to either side of the top-of-bank of the channel, lake, or wetland*
- B. *The Riparian Buffer shall be planted with native vegetation and maintained in a vegetated state (Refer to Appendix B, Pennsylvania Native Plant List, contained in the PA BMP Manual or latest guidance document from PADEP).*
1. *The following provisions also apply to Riparian Buffers on lots in existence at the time of adoption of this Ordinance:*
 - a. *If the applicable rear or side yard setback is less than 50 feet, the buffer width may be reduced to twenty-five (25) percent of the setback or twenty-five (25) feet, whichever is greater.*
 - b. *If a stream traverses a site in a manner that significantly reduces the use of the site, the buffer may be either:*
 - i. *Reduced to twenty-five (25) feet on either side, with municipal approval, or*
 - ii. *Reduced to ten (10) feet with municipal waiver*
 2. *Permitted uses within the Riparian Buffer include the following, subject to municipal approval and provided that they comply with all federal, state, and local regulations:*
 - a. *Recreational trails. See Ordinance Appendix J Riparian Buffer Trail Guidelines.*
 - b. *Utility rights-of-way*
 - c. *Bridges*
 - d. *Other uses subject to Township approval.*
 3. *If an existing buffer is legally prescribed (i.e., deed, covenant, easement, etc.) and it exceeds the requirements of this Ordinance, the existing buffer shall be maintained.*

§ 78-43 Inspections.

- A. The municipal Engineer or his municipal designee shall inspect all phases of the installation of the permanent BMPs and/or stormwater management facilities as deemed appropriate by the municipal Engineer.
- B. During any stage of the work, if the municipal Engineer or his municipal designee determines that the permanent BMPs and/or stormwater management facilities are not being installed in accordance with the approved stormwater management plan, the municipality shall revoke any existing permits or other

approvals and issue a cease and desist order until a revised drainage plan is submitted and approved, as specified in this article, and until the deficiencies are corrected.

- C. A final inspection of all BMPs and/or stormwater management facilities shall be conducted by the municipal Engineer or his municipal designee to confirm compliance with the approved drainage plan prior to the issuance of any occupancy permit.

§78-44 As-Built Plans, Completion Certificate, and Final Inspection

- A. The developer shall be responsible for providing as-built plans of all SWM BMPs included in the approved SWM site plan for activities involving regulated impervious surfaces 1,000 sq. ft. or greater and for earth disturbances 5,000 sq. ft. or greater. The as-built plans and all explanation of any discrepancies with the construction plans shall be submitted to the Municipality within three (3) months of the completion of construction of the SWM BMPs.***
- B. As-built plans shall show the location (including latitude and longitude coordinates) and as-built conditions of all SWM BMPs and include the following information: impervious surfaces included in the approved SWM site plan; topographic contours; and existing, proposed, and built impervious surfaces shown in the as-built drawings.***
- C. The as-built submission shall include a certification of completion signed by a Design Professional verifying that all permanent SWM BMPs have been constructed according to the approved plans and specifications.***
- D. The municipality will review the as-built submission for consistency with the approved SWM site plan as well as actual conditions at the project site. After receipt of the completion certification by the Municipality, the Municipality may conduct a final inspection.***
- E. If an NPDES Permit for Stormwater Discharges Associated with Construction Activities was required for the Regulated Activity, a Notice of Termination (NOT) approval must be obtained upon completion of construction prior to final approval of the project by the Municipality.***

§ 78-45 Municipality drainage plan review and inspection fee.

Fees shall be established by Haverford Township to defray plan review and construction inspection costs incurred by the municipality. All fees shall be paid by the applicant at the time of drainage plan submission. A review and inspection fee schedule shall be established by resolution of the Board of Commissioners based on the size of the regulated activity and based on the municipality's costs for reviewing drainage plans and conducting inspections pursuant to § 78-43 Haverford Township shall periodically update the review and inspection fee schedule to ensure that review costs are adequately reimbursed.

§ 78-46 Expenses covered by fees.

- A. The fees required by this article shall at a minimum cover:
- a. Administrative costs.
 - b. ***The review of the SWM site plan by Haverford Township and the Township Engineer.***

- c. *The inspection of stormwater management facilities and drainage improvements during construction.*
- d. The site inspections.
- e. *The inspection of stormwater management facilities and drainage improvements during construction.*
- f. *Attendance at meetings.*
- g. *The final inspection upon completion of the stormwater management facilities and drainage improvements presented in the SWM site plan*
- h. Any additional work required to enforce any permit provisions regulated by this article, correct violations, and assure proper completion of stipulated remedial actions.
- i. In addition, any and all costs for the review of plans and the inspection of stormwater management facilities and drainage improvements during construction by the municipal engineer, shall be deducted from the applicant's escrow account.

§ 78-47 **Performance guarantee.**

A. For SWM Site Plans that involve subdivision and land development, the applicant shall provide a financial guarantee to the Municipality for the timely installation and proper construction of all stormwater management controls as

(1) required by the approved ~~drainage~~ *SWM site* plan equal to or greater than the full construction cost of the required controls; or

(2) The amount and method of payment provided for in the SALDO.

B. For other regulated activities, Haverford Township may require a financial guarantee from the applicant.

§ 78-48 **Responsibilities for operations and maintenance (O&M) of stormwater controls and BMPs.**

A. No regulated earth disturbance activities within Haverford Township shall commence until approval by the municipality of a stormwater control and BMP operations and maintenance plan that describes how the permanent (e.g., postconstruction) stormwater controls and BMPs will be properly operated and maintained.

B. The Township shall make the final determination on the continuing maintenance responsibilities prior to final approval of the SWM Site Plan. The municipality may require a dedication of such facilities as part of the requirements for approval of the SWM Site Plan. Such a requirement is not an indication that the municipality will accept the facilities. The Township reserves the right to accept or reject the ownership and operating responsibility for any portion of the stormwater management controls.

C. Facilities, areas, or structures used as SWM BMPs shall be enumerated as permanent real estate appurtenances and recorded as deed restrictions or conservation easements that run with the land.

Facilities, areas, or structures used as SWM BMPs shall be enumerated as permanent real estate appurtenances and recorded as deed restrictions or conservation easements that run with the land.

A. The O&M Plan shall be recorded as a restrictive deed covenant that runs with the land.

B. The Municipality may take enforcement actions against an owner for any failure to satisfy the provisions of this Article.

D. The following items shall be included in the stormwater control and BMP operations and maintenance plan:

- (1) Map(s) of the project area, in a form that meets the requirements for recording at the offices of the Recorder of Deeds of Delaware County. The contents of the maps(s) shall include, but not be limited to:
 - (a) Clear identification of the location and nature of permanent stormwater controls and BMPs;
 - (b) The location of the project site relative to highways, municipal boundaries, or other identifiable landmarks;
 - (c) Existing and final contours at intervals of two feet, or others as appropriate;
 - (d) Existing streams, lakes, ponds, or other bodies of water within the project site area;
 - (e) Other physical features, including flood hazard boundaries, sinkholes, streams, existing drainage courses, and areas of natural vegetation to be preserved;
 - (f) The locations of all existing and proposed utilities, sanitary sewers, and waterlines within 50 feet of property lines of the project site;
 - (g) Proposed final changes to the land surface and vegetative cover, including the type and amount of impervious area that would be added;
 - (h) Proposed final structures, roads, paved areas, and buildings; and
 - (i) A fifteen-foot-wide access easement around all stormwater controls and BMPs that would provide ingress to and egress from a public right-of-way.
- (2) A description of how each permanent stormwater control and BMP will be operated and maintained, and the identity and contact information associated with the person(s) responsible for operations and maintenance.
- (3) The name of the project site, the name and address of the owner of the property, and the name of the individual or firm preparing the plan.

- (4) A statement, signed by the landowner, acknowledging that the stormwater controls and BMPs are fixtures that can be altered or removed only after approval by Haverford Township.
- C. The stormwater control and BMP operations and maintenance plan for the project site shall establish responsibilities for the continuing operation and maintenance of all permanent stormwater controls and BMPs, as follows:
 - (1) If a plan includes structures or lots which are to be separately owned and in which streets, sewers, and other public improvements are to be dedicated to Haverford Township, stormwater controls and BMPs may also be dedicated to and maintained by the municipality;
 - (2) If a plan includes operations and maintenance by a single ownership or if sewers and other public improvements are to be privately owned and maintained, then the operation and maintenance of stormwater controls and BMPs shall be the responsibility of the owner or private management entity.
- D. ~~Haverford Township shall make the final determination on the continuing operations and maintenance responsibilities. The municipality reserves the right to accept or reject the operations and maintenance responsibility for any or all of the stormwater controls and BMPs.~~

~~stormwater controls and BMPs.~~

§ 78-49 Municipal review of a stormwater control and BMP operations and maintenance plan.

- A. The municipality shall review the stormwater control and BMP operations and maintenance plan for consistency with the purposes and requirements of this article and any permits issued by DEP.
- B. The municipality shall notify the applicant in writing whether or not the stormwater control and BMP operations and maintenance plan is approved.
- C. The municipality ~~may require a "record drawing"~~ ***will require an as-built plan showing all constructed stormwater controls and BMPs and an explanation of any discrepancies with the approved operations and maintenance plan.***

§ 78-50 Adherence to an approved stormwater control and BMP operations and maintenance plan.

It shall be unlawful to alter or remove any permanent stormwater control and BMP required by an approved stormwater control and BMP operations and maintenance plan or to allow the property to remain in a condition which does not conform to an approved stormwater control and BMP operations and maintenance plan.

§ 78-51 Operation and Maintenance Agreements for privately owned stormwater controls and BMPs.

- A. ~~The applicant shall sign an operations and maintenance agreement with Haverford Township covering all stormwater controls and BMPs that are to be privately owned. The maintenance agreement shall be transferred with transfer of ownership. The agreement shall be substantially the same as the agreement in Appendix I of this article.~~ ***Prior to final approval of the SWM Site Plan, the property owner shall sign and record an Operation and Maintenance (O&M) Agreement (see Appendix ___) covering all stormwater control facilities which are to be privately owned.*** The maintenance

agreement shall be transferred with transfer of ownership *in perpetuity*.

- a. The owner, successor and assigns shall maintain all facilities in accordance with the approved maintenance schedule in the O&M Agreement.*
- b. The owner shall convey to the Township conservation easements to assure access for periodic inspections by the Township and maintenance, as necessary.*
- c. The owner shall keep on file with the Township the name, address, and telephone number of the person or company responsible for maintenance activities; in the event of a change, new information shall be submitted by the owner to the Municipality within ten (10) working days of the change.*

B. The owner is responsible for operation and maintenance (O&M) of the SWM BMPs. If the owner fails to adhere to the O&M Agreement, the Township may perform the services required and charge the owner appropriate fees. Nonpayment of fees may result in a lien against the property.

C. Other items may be included in the agreement where determined necessary to guarantee the satisfactory operation and maintenance of all permanent stormwater controls and BMPs. The agreement shall be subject to the review and approval of the Township.

§ 78-52 Stormwater management easements.

- A. Stormwater management easements are required for all areas used for off-site stormwater control, unless a waiver is granted by the ~~municipal Engineer~~ **Township**.
- B. Stormwater management easements shall be provided by the applicant or property owner if necessary for access for inspections and maintenance or the preservation of stormwater runoff conveyance, infiltration, and detention areas and other stormwater controls and BMPs by persons other than the property owner. The purpose of the easement shall be specified in any agreement under § 78-51.

§ 78-53 Maintenance agreement for privately owned stormwater facilities.

- A. Prior to final approval of the site's drainage plan, the applicant shall sign and record the maintenance agreement contained in Appendix I, which is attached and made part hereof, covering all stormwater control facilities that are to be privately owned.
- B. Other items may be included in the agreement where determined necessary to guarantee the satisfactory maintenance of all facilities. The maintenance agreement shall be subject to the review and approval of the municipal Solicitor and Board of Commissioners.

§ 78-54 Recording of an approved stormwater control and BMP operations and maintenance plan and related agreements.

- A. The owner of any land upon which permanent stormwater controls and BMPs will be placed, constructed, or implemented, as described in the stormwater control and BMP operations and maintenance plan, shall record the following documents in the Office of the Recorder of Deeds for Delaware County within 15 days of approval of the stormwater control and BMP operations and maintenance plan by the municipality:

- (1) The operations and maintenance plan, or a summary thereof,

- (2) Operations and Maintenance Agreement for Privately Owned Stormwater Controls and BMPs under § 78-51; and
 - (3) Stormwater Management Easements under § 78-52.
- B. The municipality may suspend or revoke any approvals granted for the project site upon discovery of failure on the part of the owner to comply with this section.

§ 78-55 Municipal Stormwater Control and BMP Operation and Maintenance Fund.

A. *The Township shall inspect SWM BMPs, facilities, and/or structures installed under this Ordinance according to the following frequencies, at a minimum, to ensure the BMPs, facilities and/or structures continue to function as intended.* Persons installing stormwater controls or BMPs shall be required to pay a specified amount to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to help defray costs of periodic inspections and maintenance expenses. The amount of the deposit shall be determined as follows:

- (1) If the stormwater control or BMP is to be privately owned and maintained, the deposit shall cover the cost of periodic inspections performed by Haverford Township for a period of 10 years, as estimated by the municipal Engineer. After that period of time, inspections will be performed at the expense of the municipality. *The following minimum inspection frequencies are required:*
 - 1) *Annually for the first 5 years.*
 - 2) *Once every 3 years thereafter*
 - 3) *During or immediately after the cessation of a 25-year or greater storm, as determined by the Municipal Engineer.*
 - 4) *The Township Engineer may request that the landowners or landowner's designee submit an inspection report after the cessation of a 10-year or greater storm event if there is reason to believe that a BMP has sustained damage that impacts its ability to function as designed and if the BMP's failure would result in damage to downgradient properties.*
- (2) If the stormwater control or BMP is to be owned and maintained by Haverford Township, the deposit shall cover the estimated costs for maintenance and inspections for 10 years. The municipal Engineer will establish the estimated costs utilizing information submitted by the applicant. *The following minimum inspection frequencies are required:*
 - 1) *Annually for the first 5 years.*
 - 2) *Once every 3 years thereafter*
 - 3) *During or immediately after the cessation of a 25-year or greater storm, as determined by the Municipal Engineer.*
- (3) *The above referenced inspections shall be conducted during or immediately following precipitation events or in dry weather conditions if the BMP design parameters include dewatering with a specified period of time. A written inspection report shall be created to document each inspection. The inspection report shall contain the date and time of the inspection, the individual(s) who completed*

the inspection, the location of the BMP, Stormwater Management Facility or structure inspected, observations on performance, and recommendations for improving performance, if applicable.

- (4) The amount of the deposit to the fund shall be converted to present worth of the annual series values. The municipal Engineer shall determine the present worth equivalents, which shall be subject to the approval of the governing body.
- B. If a stormwater control or BMP is proposed that also serves as a recreational facility (e.g., ball field or lake), Haverford Township may reduce or waive the amount of the maintenance fund deposit based upon the value of the land for public recreational purpose.
- C. If at some future time a stormwater control or BMP (whether publicly or privately owned) is eliminated due to the installation of storm sewers or other storage facility, the unused portion of the maintenance fund deposit will be applied to the cost of abandoning the facility and connecting to the storm sewer system or other facility. Any amount of the deposit remaining after the costs of abandonment are paid will be returned to the depositor.
- D. If stormwater controls or BMPs are accepted by Haverford Township for dedication, the municipality may require persons installing stormwater controls or BMPs to pay a specified amount to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to help defray costs of operations and maintenance activities. The amount may be determined as follows:
 - (1) The amount shall cover the estimated costs for operations and maintenance for 10 years, as determined by Haverford Township.
 - (2) The amount shall then be converted to present worth of the annual series values.
- E. If a stormwater control or BMP is proposed that also serves as a recreational facility (e.g., ball field or lake), Haverford Township may adjust the amount due accordingly.
- F. Haverford Township shall require applicants to pay a fee to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to cover long-term maintenance of stormwater controls and BMPs.
- G. Haverford Township may require applicants to pay a fee to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to cover *inspections, long term maintenance of stormwater BMPs and conveyances, and stormwater related problems which may arise from the land development and earth disturbance.*

§ 78-56 **Prohibited Discharges and Connections.**

- A. *Any drain or conveyance, whether on the surface or subsurface, that allows any non-stormwater discharge including sewage, process wastewater, and wash water to enter the Township's separate storm sewer system, riparian buffers, wetlands, or other waters of this Commonwealth, and any connections to the storm drain system from indoor drains and sinks, is prohibited.*
- B. No person in Haverford Township shall allow, or cause to allow, stormwater discharges into ~~the Township's separate storm sewer system~~ *a regulated small MS4, or discharges into waters of this*

Commonwealth, which are not composed entirely of stormwater, except (1) ~~as provided in paragraph C below~~ and (2) **as provided in subsection C below, and** discharges authorized under a state or federal permit.

- C. Discharges that may be allowed based on a finding by the Township that the discharge(s) do not significantly contribute to pollution to surface waters of the Commonwealth, are: **The following discharges are authorized unless they are determined to be significant contributors to pollution to a regulated small MS4 or to the waters of this Commonwealth:**
- a. Discharges from firefighting activities.
 - b. ~~Potable water sources including the dechlorinated waterline and fire hydrant flushings.~~
Discharges from potable water sources including water line flushing and fire hydrant flushing, if such discharges do not contain detectable concentrations of Total Residual Chlorine (TRC).
 - c. ~~Irrigation drainage.~~ **Non-contaminated irrigation drainage water.**
 - d. Routine external building washdown (which does not use detergents or other compounds).
 - e. ~~Air conditioning condensate.~~ **Non-contaminated HVAC condensation and water from geothermal systems.-**
 - f. ~~Water from individual residential car washing.~~ **Residential (i.e., not commercial) vehicle wash water where cleaning agents are not utilized.**
 - g. Springs and water from crawl space pumps.
 - h. Uncontaminated water from foundation or from footing drains.
 - i. Flows from riparian habitats and wetlands.
 - j. Lawn watering.
 - k. Pavement washwaters where spills or leaks of toxic or hazardous materials have not occurred (unless all spill material has been removed) and where detergents are not used.
 - l. Dechlorinated swimming pool discharges.
 - m. Uncontaminated groundwater
 - n. Non-contaminated hydrostatic test water discharges if such discharges do not contain detectable concentrations of TRC.**
 - o. Diverted stream flows.**
- D. In the event that the municipality determines that any of the discharges identified in Subsection C significantly contribute pollutants to a regulated small MS4 or to the waters of this Commonwealth, **or is so notified by DEP**, the Township will notify the responsible person(s) to cease the discharge.
- E. Upon notice provided by the Township under **§78-56.D** the discharger will have a reasonable time, as determined by the Township, to cease the discharge consistent with the degree of pollution caused by the discharge.

F. Nothing in this section shall affect a discharger's responsibilities under state law.

§ 78-57 Roof Drains and Sump Pumps.

A. ~~Roof drains shall not be connected to streets, sanitary or storm sewers, or roadside ditches in order to promote overland flow and infiltration/percolation of stormwater where advantageous to do so.~~ ***Roof drains and sump pumps shall not be connected to sanitary sewers.***

B. ~~When it is more advantageous to connect directly to streets or storm sewers, connections of roof drains to streets or roadside ditches may be permitted on a case by case basis as determined by Haverford Township.~~ ***Roof drains and sump pumps shall not be connected to streets, storm sewers, or roadside ditches except on a case by case basis as determined by the Township.***

C. Roof drains and sump pumps shall discharge to infiltration areas or vegetative BMPs to the maximum extent practicable where advantageous to do so.

§ 78-58 Prohibited connections.

The following connections are prohibited, except as provided in § 78-56.C above:

A. Any drain or conveyance, whether on the surface or subsurface, which allows any non-stormwater discharge including sewage, process wastewater, and wash water, to enter the separate storm sewer system, and any connections to the storm drain system from indoor drains and sinks.

B. Any drain or conveyance connected from a commercial or industrial land use to the separate storm sewer system which has not been documented in plans, maps, or equivalent records and approved by Haverford Township.

C. ***Any drain or conveyance that delivers non-stormwater discharges directly into wetlands, riparian buffers, or other waters of the Commonwealth is prohibited.***

§ 78-59 Alteration of *SWM* BMPs

A. No person shall modify, remove, fill, landscape, or alter any existing stormwater control or BMP unless it is part of an approved maintenance program without the written approval of Haverford Township.

B. No person shall place any structure, fill, landscaping, or vegetation into a stormwater control or BMP or within a drainage easement which would limit or alter the functioning of the stormwater control or BMP without the written approval of Haverford Township.

§ 78-60 Right-of-entry.

A. Upon presentation of proper credentials, the Township or its designated agent may enter at reasonable times upon any property within the municipality to inspect the condition, implementation, or operation and maintenance of ***all erosion and sediment controls*** and ***permanent*** stormwater BMPs, ***conveyances, or other stormwater management facilities both during and after the completion of the regulated activity, or for compliance with any requirement of the stormwater structures and facilities*** in regard to any aspect regulated by this Ordinance.

- B. Stormwater control and BMP owners and operators shall allow persons working on behalf of Haverford Township ready access to all parts of the premises for the purposes of determining compliance with this article.
- C. Persons working on behalf of Haverford Township shall have the right to temporarily locate on any stormwater control or BMP in the municipality such devices as are necessary to conduct monitoring and/or sampling of the discharges from such stormwater control or BMP.
- D. Unreasonable delays in allowing the municipality access to a stormwater control or BMP is a violation of this article.
- E. *If the property owner or representative does not grant access to the Municipality within 24 hours of the notification, it will be a violation of this Ordinance.*

§ 78-61 **Public nuisance.**

- A. The violation of any provision of this article is hereby deemed a public nuisance.
- B. Each day that a violation continues shall constitute a separate violation.

§ 78-62 **Enforcement generally.**

- A. Whenever Haverford Township finds that a person has violated a prohibition or failed to meet a requirement of this article, the municipality may order compliance by written notice to the responsible person. Such notice may, without limitation, require the following remedies:
 - a. Performance of monitoring, analyses, and reporting;
 - b. Elimination of prohibited connections or discharges;
 - c. Cessation of any violating discharges, practices, or operations;
 - d. Abatement or remediation of stormwater pollution or contamination hazards and the restoration of any affected property;
 - e. Payment of a fine to cover administrative and remediation costs;
 - f. Implementation of stormwater controls and BMPs; and
 - g. Operation and maintenance of stormwater controls and BMPs.
- B. Such notification shall set forth the nature of the violation(s) and establish a time limit for correction of these violations(s). Said notice may further advise that, if applicable, should the violator fail to take the required action within the established deadline, the work will be done by Haverford Township or designee, and the expense thereof shall be charged to the violator.
- C. Failure to comply within the time specified shall also subject such person to the penalty provisions of this article. All such penalties shall be deemed cumulative and shall not prevent the municipality from pursuing any and all other remedies available in law or equity.

§ 78-63 **Suspension and revocation of permits and approvals.**

- A. Any building, land development, or other permit or approval issued by the Township pursuant to this Ordinance may be suspended or revoked for:
- a. Non-compliance with or failure to implement any provision of the permit.
 - b. A violation of any provision of this Ordinance *or any other applicable law, ordinance, rule, or regulation relating to the regulated activity.*
 - c. The creation of any condition or the commission of any act during construction or development which constitutes or creates a hazard, nuisance, pollution, or endangers the life or property of others.
- B. A suspended permit or approval may be reinstated by the Municipality when:
- a. The Township *Township engineer or designee* has inspected and approved the corrections to the stormwater controls and BMPs or the elimination of the hazard or nuisance.
 - b. The Township is satisfied that the violation or the article, law, or rule and regulations has been corrected.
- C. A permit or approval that has been revoked by the Township cannot be reinstated. The applicant may apply for a new approval under the provisions of this Ordinance.
- D. Prior to revocation or suspension of a permit and at the request of the applicant, the governing body shall schedule a hearing to discuss the noncompliance if there is no immediate danger to life, public health, or property. The expense of a hearing shall be the applicant's responsibility.*

§ 78-64 **Violations and penalties.**

- A. Any person violating the provisions of this article shall be guilty of a misdemeanor and upon conviction shall be subject to a fine of not more than \$1,000 for each violation, recoverable with costs, or imprisonment of not more than 90 days, or both. Each day that the violation continues shall be a separate offense.
- B. In addition, the Township, through its Solicitor, may institute injunctive, mandamus, or any other appropriate action or proceeding at law or in equity for the enforcement of this article. Any court of competent jurisdiction shall have the right to issue restraining orders, temporary or permanent injunctions, mandamus, or other appropriate forms of remedy or relief.

§ 78-65 **Notification**

In the event that a person fails to comply with the requirements of this article or fails to conform to the requirements of any permit issued hereunder, the Township shall provide written notification of the violation. Such notification shall state the nature of the violation(s) and establish a time limit for correction of these violation(s). Failure to comply within the time specified shall subject such person to the penalty provisions of this article. All such penalties shall be deemed cumulative and shall not prevent the Township from pursuing any and all remedies. It shall be the responsibility of the owner of the real property on which any regulated activity is proposed to occur, is occurring, or has occurred to comply with the terms and conditions of this article.

§78- 66 **Enforcement**

The Board of Commissioners is hereby authorized and directed to enforce all of the provisions of this article. All inspections regarding compliance with the ~~drainage~~ **SWM site** plan shall be the responsibility of the Township Engineer or other qualified persons designated by the Board of Commissioners.

- A. A set of design plans approved by the Township shall be on file at the site throughout the duration of the construction activity. Periodic inspections may be made by the Township or designee during construction.
- B. It shall be unlawful for any person, firm, or corporation to undertake any regulated activity under § 78-17 on any property except as provided for in the approved ~~drainage~~ **SWM site** plan and pursuant to the requirements of this article. It shall be unlawful to alter or remove any control structure required by the ~~drainage~~ **SWM site** plan pursuant to this article or to allow the property to remain in a condition which does not conform to the approved ~~drainage~~ **SWM site** plan.
- C. At the completion of the project and as a prerequisite for the release of the performance guarantee, the owner or his representatives shall:
- (1) Provide a certification of completion from an engineer, architect, surveyor or other qualified person verifying that all permanent facilities have been constructed according to the plans and specifications and approved revisions thereto.
 - (2) Provide a set of as-built (record) drawings.
- D. After receipt of the certification by Haverford Township, a final inspection shall be conducted by the municipal Engineer or designated representative to certify compliance with this article.
- E. Occupancy permit. An occupancy permit shall not be issued unless the certification of completion pursuant to § 78-66.C(1) has been secured. The occupancy permit shall be required for each lot owner and/or applicant for all subdivisions and land developments in Haverford Township.

§ 78-67 **Appeals.**

- A. Any person aggrieved by any action of the Township or its designee may appeal to the Board of Commissioners of Haverford Township within 30 days of that action.
- B. Any person aggrieved by any decision of the Board of Commissioners of Haverford Township may appeal to the County Court of Common Pleas in the County where the activity has taken place within 30 days of the municipal decision.

Ordinance No. P13-2024

Traffic

An ordinance of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, further amending and supplementing Ordinance no. 1960, adopted June 30, 1986, and known as "General laws of the Township of Haverford" chapter 175, vehicles and traffic.

Be it enacted and ordained by the Board of Commissioners of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, and it is hereby enacted and ordained by the authority of the same:

Section 1. § 175-83 Schedule VIII: Stop Intersections

on Woodbine Road, north, at the intersection of Washington Avenue

on Paddock Road at the intersection of Merrybrook Drive

Section 2. § 175-95 Schedule XX: Special Purpose Parking Zones

in front of 606 Darby Road, 1st Floor

Section 3. Upon effective date of this ordinance, the Highway Department shall install appropriate signs in the designated section or zones giving notice of the regulations aforesaid.

Section 4. Any ordinance or part of an ordinance to the extent that it is inconsistent herewith is hereby repealed.

Adopted this day of , 2024.

Resolution Number 2402-2024

American Rescue Plan Act Coronavirus Local Fiscal Recovery Fund
Public Works Heavy Equipment, Paving at Public Works Yard and Sidewalk Project

Whereas, Haverford Township's direct allocation from the Coronavirus State and Local Fiscal Recovery Fund was \$19.8 million;

Whereas, on April 1, 2022, the U.S. Department of Treasury released the Final Rule covering the Coronavirus State and Local Fiscal Recovery Fund, as created and directed by the American Rescue Plan Act authorizing recipients to use funds to invest in public health improvements, economic recovery and development, services to disproportionately affected communities, and general government services, among other allowable purposes; and,

Whereas, the Board of Commissioners desires to make improvements and financial investments in several Township projects and initiatives in accordance with the allowable spending structure as described by the U.S. Department of Treasury's Final Rule, as follows:

- One (1) Roll-Off Truck in the amount of \$218,534.15
- Repaving of Public Works Yard located at 1 Hilltop Road, Haverford Township in the amount of \$458,519.75 including design, engineering, pre and post construction administration
- Installation of sidewalks, aprons and ADA ramps on the north side of City Avenue from Farwood Road west approximately 450 feet in the amount of \$79,985.00 including design, engineering, pre and post construction administration
- Emergency Sewer Replacement – Landover Road in the amount of \$100,000.00

Now, Therefore, be it Resolved, that the Board of Commissioners of Haverford Township hereby approves the use of funds from the Township's American Rescue Plan Fund allocation for the above referenced projects and initiatives.

Resolution No. 2407-2024

Commitment to Safe Streets for All

Whereas, the Board of Commissioners of the Township of Haverford is committed to keeping residents and visitors travelling through Haverford Township safe; and

Whereas, motor vehicle related crashes in Haverford Township resulted in 7 fatal crashes and 27 serious injuries reported in the (2017 – 2022); and

Whereas, death and serious injury are preventable and should not be tolerated; and

Whereas, historically streets have been designed and constructed to maximize the level of service for motor vehicles, rather than to safely move people utilizing all modes of transportation; and

Whereas, the Safe Systems Approach takes a proactive approach and prioritizes safer roads, safer people, safer vehicles and safer speeds, and encourages design of transportation systems that can accommodate inevitable human mistakes; and

Whereas, Haverford Township has developed a Township Wide Safety Action Plan (“Safety Action Plan”) using the Safe Systems Framework.

Now, therefore be it resolved, that the Board of Commissioners of the Township of Haverford adopts the Township Wide Safety Action Plan using the Safe Systems Approach with the goal of reducing deaths and serious injuries by 50% before 2030 and achieving zero fatalities and serious injuries by 2040; and

Be it further resolve that the Board of Commissioners directs the Township Manager to implement demonstration projects set forth in the Safety Action Plan to test safety interventions on selected Township roads.

Whereas, Haverford Township's direct allocation from the Coronavirus State and Local Fiscal Recovery Fund was \$19.8 million;

Whereas, on April 1, 2022, the U.S. Department of Treasury released the Final Rule covering the Coronavirus State and Local Fiscal Recovery Fund, as created and directed by the American Rescue Plan Act authorizing recipients to use funds to invest in public health improvements, economic recovery and development, services to disproportionately affected communities, and general government services, among other allowable purposes; and,

Whereas, the Board of Commissioners desires to make improvements and financial investments in several Township projects and initiatives in accordance with the allowable spending structure as described by the U.S. Department of Treasury's Final Rule, as follows:

Purchase (2) 2024 Chevrolet Blazer Police Package electric vehicles for a total funding allocation of \$119,800

Now, therefore be it resolved, that the Board of Commissioners of Haverford Township hereby approves the use of funds from the Township's American Rescue Plan Fund allocation for the above referenced projects and initiatives.

Resolved this 15th day of October, 2024.

Township of Haverford

Resolution Number 2409-2024

Authorizing Application to the 2024 PECO Green Region Open Space Program for the Beautification of Lawrence Road Park and Brookline Park Project

Whereas, the Township of Haverford desires to undertake the Beautification of Lawrence Road Park and Brookline Park project; and

Whereas, the Township desires to apply to the PECO Green Region Open Space Program for a grant for the purpose of carrying out this project; and

Whereas, the Township has received and understands the 2024 PECO Green Region Open Space Program Guidelines.

Now, therefore, be it resolved, that the Board of Commissioners of Haverford Township hereby approves this project and authorizes application to the PECO Green Region Open Space Program in the amount of \$2,477.00; and, if the application is granted, the Township commits to the expenditure of matching funds in the amount of \$2,477.00 necessary for the project's success.

Resolved this 15th day of October, 2024.

Township of Haverford

By: C. Lawrence Holmes, Esq., President, Board of Commissioners

Attest: David R. Burman, Township Manager/Secretary

Township of Haverford

Resolution No. 2410-2024

Amending Resolution No. 2012-1841 to Include the Sale of Ready-to-Drink Cocktails at the Giant Store Located in the Township of Haverford

Whereas, Act 141 of 2000 ("the Act") authorizes the Pennsylvania Liquor Control Board to approve, in certain instances, the transfer of restaurant liquor licenses across municipal boundaries within the same county regardless of the quota limitations provided for in Section 461 of the Liquor Code if, as in Haverford Township the sales of liquor and malt or brewed beverages are legal in the municipality receiving the license; and

Whereas, the Act requires the applicant to obtain from the receiving municipality a resolution approving the inter-municipal transfer of the liquor license prior to an applicant's submission of an application to the Pennsylvania Liquor Control Board; and

Whereas, the Liquor Code stipulates that, prior to adoption of a resolution by the receiving municipality, at least one hearing be held for the purpose of permitting individuals residing within the municipality to make comments and recommendations regarding applicant's intent to transfer a liquor license into the receiving municipality; and

Whereas, the Township of Haverford Board of Commission held a properly advertised public hearing pursuant to the notice provisions of Section 102 of the Liquor Code to receive comments on the proposed liquor license transfer; and

Whereas, on February 13, 2012, the Township of Haverford Board of Commissioners approved Resolution No. 1841-2012, authorizing the inter-municipal transfer of Restaurant Liquor License No. R-2524 into the Township of Haverford for the sales of beer only with no hard liquor sales to Giant Food Stores, LLC, and which license transfer was subsequently approved by the Liquor Control Board; and

Whereas, the Liquor Control Board now issues Ready-To-Drink (RTDs) Cocktail permits to qualified restaurant and hotel licenses, including grocery store-based restaurants, permitting them to sell ready-to-drink cocktails for off-premise consumption; and

Whereas, the Board of Commissioners have approved that beer, wine and RTDs may be sold from 7am to 10pm – Monday through Saturday and 9am to 10pm on Sunday; and

Whereas, the Board of Commissioners have approved that Giant Food Stores, LLC may allow customers to consume a maximum of two (2) RTD Cocktails on the licensed premises in the seating area in a single day; and

Now, therefore, be it resolved, that Giant Food Stores, LLC., is now permitted to sell RTD Cocktails at the Giant located at Township Line Road, Route 1, Haverford Township, Delaware County, Pennsylvania.

Be it further resolved, that transfers, designations and assignments of licenses hereunder are subject to approval by the Pennsylvania Liquor Control Board.

Resolved this 15th day of October, 2024.

RE: ARPA FUNDED PROJECTS
2025/2026 ENGINEERING SERVICES

Dear Aimee:

As requested, please consider this letter as our proposal to provide professional engineering services for various existing ARPA funded projects that are expected to extend into next year (2025).

SCOPE OF SERVICES

Provide design, permitting, construction administration, and construction observation services as needed for the below projects.

1. The following projects are anticipated to be Substantially Complete in 2024, with final inspections, punch list inspections and project close-out tasks scheduled for 2025.

- ▶ Crescent Hill/Francis Drive Sanitary Sewer Lining..... Fee \$5,000
- ▶ Cobbs Creek Interceptor Buttressing..... Fee \$15,000
- ▶ Leachate Trench Replacement..... Fee \$10,000
- ▶ Dill Road Storm Sewer Lining Fee \$15,000
- ▶ Township Building Electric Vehicle Charging Stations..... Fee \$20,000
- ▶ Township Line Sidewalk Fee \$5,000
- ▶ Darby Road Streetscape Lighting..... Fee \$5,000

2. The following projects are scheduled to be awarded in 2024. Construction is scheduled for 2025.

- ▶ McDonald Field Lighting Fee \$15,000
- ▶ Public Works Yard Paving Fee \$25,000
- ▶ Brookline Park Stormwater Management System Fee \$35,000

SCHEDULE

This work is scheduled to be completed in 2025, dependent upon construction schedules.

FEE

Pennoni will complete the professional services as identified above for a lump sum fee of **\$150,000**.

BILLING AND PAYMENT

These services will be billed monthly.

TERMS AND CONDITIONS

Per the existing Terms and Conditions as the appointed Township Engineer.

Thank you for affording us the opportunity to work with you on this project. If you have any questions, please feel free to call us.

Sincerely,

PENNONI ASSOCIATES INC.

David Pennoni, PE
Chief Operating Officer

cc: David R. Burman, Township Manager – Haverford Township

Please indicate your acceptance of this proposal by signing and returning a copy as our authorization to proceed. In signing this proposal, the Client authorizes Pennoni to complete the professional services outlined in this proposal.

Township of Haverford

Finance Department Memorandum

Date: October 7, 2024

To: David R. Burman, Township Manager

From: Aimee Cuthbertson, Director of Finance/Asst Township Manager

Subject: Electricity & Natural Gas Procurement

The Township is approaching the end of its current two year procurement contract for wind-sourced electricity generation with Constellation thru a PML purchasing program (Pennsylvania Municipal League). As you know, there are two prongs to energy procurement – generation (consumer’s choice) and distribution (Constellation).

For natural gas, we are not currently under any purchasing contract and instead paying market rates.

The Township solicited pricing for both wind-powered electricity and natural gas supply thru PML as well as through Aspen Energy, the results of which are below:

ELECTRIC CONTRACT PRICING (2 Year Pricing)

	<i>2023-2024 Rate for Wind Powered Electricity Generation</i>	<i>2025-2026 Rate for Wind Powered Electricity Generation</i>	<i>Expected Energy Usage per Year (kWh)</i>	<i>Expected Budget Impact per Year</i>
<i>Current Rate with Constellation (PA Municipal League)</i>	<i>\$.07650</i>	<i>n/a</i>	<i>4,185,696</i>	
<i>Constellation (PA Municipal League)</i>		<i>\$.06975</i>	<i>4,185,696</i>	<i>(\$28,253) savings</i>
<i>Aspen Energy</i>		<i>\$.07338</i>	<i>4,185,696</i>	<i>(\$13,059)</i>

				savings
--	--	--	--	---------

NATURAL GAS CONTRACT PRICING (2 Year Pricing)

	<i>2023-2024 Average Rate Paid for Natural Gas Supply</i>	<i>2025-2026 Rate for Natural Gas Supply</i>	<i>Expected Natural Gas Usage per Year (Dth aka dexatherm)</i>	<i>Expected Budget Impact per Year</i>
<i>Current Market Rate with Constellation</i>	\$4.550	n/a	7,300.0	
<i>Constellation (PA Municipal League)</i>		\$4.259	7,300.0	(\$2,124) savings
<i>Aspen Energy</i>		\$4.760	7,300.0	\$1,533

While the above pricing is indicative of the current market, actual rates change daily. However, using indicative pricing as the base for comparison, staff recommends to continue with a two (2) year contract for wind powered electricity generation at all Township facilities with Constellation through a purchasing program with the Pennsylvania Municipal League and a two (2) year purchasing contract for natural gas supply at all Township facilities also with Constellation.

This recommendation is subject to any material price changes between Friday, September 27, 2024 and Tuesday, October 15, 2024. As such, an update will be provided at the October 15, 2024 meeting.

**RE: Public Works Complex Paving
Contract No. MY-7**

Dear Mr. Burman:

Attached herewith is a tabulation of the bids received on Wednesday, October 2, 2024, at 10:00 a.m. for the above referenced contract. The low bidder for both the Base Bid and Base Bid with all Add Alternates was Innovative Construction Services Inc. of Folcroft, PA with a Base Bid of \$224,724.50 and Base Bid with all Add Alternates totaling \$396,254.50. However, Innovative Construction Services does not meet the requirements of the Township's Responsible Contractors Ordinance.

The second bidder, T. Schiefer Contractors Inc. of Doylestown, Pa does meet the Township's Responsible Contractors Ordinance. They submitted a Base Bid of \$241,222.50 and a Base Bid with all Add Alternates totaling \$458,519.75.

We have worked with T. Schiefer Contractors Inc. in the past and have found their work to be satisfactory. We therefore recommend the Township award the Base Bid with all Add Alternates to T. Schiefer Contractors Inc. in low bid amount of \$458,519.75 contingent upon their execution of the contract and supply of the required bonds and insurance.

Should you have any questions or comments, please do not hesitate to contact the undersigned.

Sincerely,
PENNONI

David Pennoni, PE
Township Engineer

**RE: City Avenue Sidewalk
Contract No. R-32**

Dear Mr. Burman:

Attached herewith is a tabulation of the bids received on Wednesday, October 2, 2024, at 10:00 a.m. for the above referenced contract. The low bidder was Delaware Environmental Construction Services of Newark, DE in the amount of \$79,985.00. We have worked with Delaware Environmental Construction Services in the past and have found their work to be satisfactory.

We recommend the Township award the contract to Delaware Environmental Construction Services in the low bid amount of \$79,985.00 contingent upon execution of the contract and supply of the required bonds and insurance.

Should you have any questions or comments, please do not hesitate to contact the undersigned.

Sincerely,
PENNONI

QUOTATION

September 13, 2024

Haverford Township
2325 Darby Road
Havertown, PA 19083
Attn: Mr. Gary Pasetti, Superintendent

As per the request of our sales representative Joel Chernin we are pleased to offer the following for your consideration. **In accordance with the COSTARS 025-E22-471 Municipal Work Vehicle contract, we are pleased to offer the following for your consideration.**

One (1) Galfab Hoist Roll-Off, Mounted on Customer Supplied Chassis

- Install-Mount Cable Hoist
- Muncie PTO Allison 4000Series S
- Hydraulic Pump 39 GPM
- Hydraulic Valve 2 Spool
- Hose Kit *Tarp Mount*
- Hydraulic Tank 48 Gal-Side Mount
- Hoist Control 2 Spool Air
- Light Bumper Split
- DOT Bumper Light Kit
- ICC Bumper *Auto Foldup*
- Steel Fender Kit *Tandem Axle*
- Rear Container Hold-Down *Ratchet Strap*
- Tool Box-48 Steel *Front Load*
- Tarping System *Pioneer RP4500*
- Hoist Finish *Mounted Black*
- Standard Body and Hydraulics Warranty

Price for Galfab Hoist Roll-Off.....	\$ 73,527.53
Less 5% PA Costars Discount.....	\$- 3,676.38
Total Galfab Roll-Off PA-Costars Price.....	\$ 69,851.15
Freight.....	\$ 2,850.00
Prep, Delivery and Training.....	\$ 3,500.00
Total Galfab Hoist Roll-Off.....	\$ 76,201.15

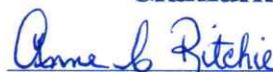

PRICE FIRM UNTIL OCTOBER 11, 2024

Important Notice: The price quoted does not include re-routing of exhaust pipes, removing or relocating fuel tanks, battery boxes or air tanks, or any other chassis modifications. If any of the above is required an extra charge will be made on a time and material basis.

Thank you for the opportunity to provide you with the following quotation on a new International truck. I am sure the following detailed specification will meet your operational requirements, and I look forward to serving your business needs.

Model Profile
2026 HV607 SBA (HV607)

AXLE CONFIG:	6X4
APPLICATION:	Roll-On/Roll-off
MISSION:	Requested GVWR: 66000. Calc. GVWR: 64000. Calc. GCWR: 80000 Calc. Start / Grade Ability: 15.04% / 1.73% @ 55 MPH Calc. Geared Speed: 73.3 MPH
DIMENSION:	Wheelbase: 254.00, CA: 186.90, Axle to Frame: 91.00
ENGINE, DIESEL:	{Cummins L9 350} EPA 2024, 350HP @ 2200 RPM, 1050 lb-ft Torque @ 1200 RPM, 2200 RPM Governed Speed, 350 Peak HP (Max)
TRANSMISSION, AUTOMATIC:	{Allison 3000 RDS} 6th Generation Controls, Close Ratio, 5-Speed with Overdrive, with PTO Provision, Less Retarder, Includes Oil Level Sensor, with 80,000-lb GVW and GCW Max, On/Off Highway
CLUTCH:	Omit Item (Clutch & Control)
AXLE, FRONT NON-DRIVING:	{Meritor MFS-18-133A} Wide Track, I-Beam Type, 18,000-lb Capacity
AXLE, REAR, TANDEM:	{Meritor RT-46-160} Single Reduction, 46,000-lb Capacity, 200 Wheel Ends Gear Ratio: 4.89
CAB:	Conventional, Day Cab
TIRE, FRONT:	(2) 315/80R22.5 Load Range L HAU 3 WT (CONTINENTAL), 480 rev/mile, 68 MPH, All-Position
TIRE, REAR:	(8) 11R22.5 Load Range G HDR2+ (CONTINENTAL), 491 rev/mile, 75 MPH, Drive
SUSPENSION, REAR, TANDEM:	{Hendrickson HMX EX 460} Walking Beam, 46,000-lb Capacity, 54" Axle Spacing, Rubber Springs, with Transverse Torque Rods, Rubber End Bushings
FRAME REINFORCEMENT:	Full Outer C-Channel, Heat Treated Alloy Steel (120,000 PSI Yield), 10.813" x 3.892" x 0.312" (274.6mm x 98.8mm x 7.9mm), 480.0" (12192mm) OAL
PAINT:	Cab schematic 100WL Location 1: 9219, Winter White (Std) Chassis schematic N/A

Description

Base Chassis, Model HV607 SBA with 254.00 Wheelbase, 186.90 CA, and 91.00 Axle to Frame.

AXLE CONFIGURATION {Navistar} 6x4

Notes

: Pricing may change if axle configuration is changed.

ENGINE, DIESEL {Cummins L9 350} EPA 2024, 350HP @ 2200 RPM, 1050 lb-ft Torque @ 1200 RPM, 2200 RPM Governed Speed, 350 Peak HP (Max)

EMISSION, CALENDAR YEAR {Cummins L9} EPA, OBD and GHG Certified for Calendar Year 2024

CARB EMISSION WARR COMPLIANCE for Cummins L9 Engines

CARB IDLE COMPLIANCE Low NOx Idle Engine, Complies with California Clean Air Regulations; Includes "Certified Clean Idle" Decal located on Driver Door

EPA IDLE COMPLIANCE Low NOx Idle Engine, Complies with EPA Clean Air Regulations; Includes "Certified Clean Idle" Decal on Hood

VEHICLE REGISTRATION IDENTITY ID for the State of Pennsylvania

RADIATOR Aluminum, Cross Flow, Front to Back System, 1228 Ssqln, with 1167 Ssqln Charge Air Cooler

Includes

: DEAERATION SYSTEM with Surge Tank

: HOSE CLAMPS, RADIATOR HOSES Gates Shrink Band Type; Thermoplastic Coolant Hose Clamps

: RADIATOR HOSES Premium, Rubber

FAN DRIVE {Horton Drivemaster} Two-Speed Type, Direct Drive, with Residual Torque Device for Disengaged Fan Speed

Includes

: FAN Nylon

AIR CLEANER Single Element

ANTI-FREEZE Red, Extended Life Coolant; To -40 Degrees F/ -40 Degrees C, Freeze Protection

ENGINE CONTROL, REMOTE MOUNTED Provision for; Includes Wiring for Body Builder Installation of PTO Controls and Starter Lockout, with Ignition Switch Control, for Cummins B6.7 and L9 Engines

THROTTLE, HAND CONTROL Engine Speed Control for PTO; Electronic, Stationary Pre-Set, Two Speed Settings; Mounted on Steering Wheel

TRANSMISSION, AUTOMATIC {Allison 3000 RDS} 6th Generation Controls, Close Ratio, 5-Speed with Overdrive, with PTO Provision, Less Retarder, Includes Oil Level Sensor, with 80,000-lb GVW and GCW Max, On/Off Highway

ALLISON SPARE INPUT/OUTPUT for Rugged Duty Series (RDS) and Regional Haul Series (RHS), General Purpose Trucks, Construction, Package Number 223

NEUTRAL AT STOP Allison Transmission Shifts to Neutral When Service Brake is Depressed and Vehicle is at Stop; Remains in Neutral Until Service Brake is Released

OIL COOLER, TRANSMISSION {Modine} Water to Oil Type

PTO LOCATION Customer Intends to Install PTO at Left Side of Transmission

SHIFT CONTROL PARAMETERS {Allison} 3000 or 4000 Series Transmissions, Performance Programming

TRANSMISSION OIL Synthetic; 29 thru 42 Pints

TRANSMISSION SHIFT CONTROL Column Mounted Stalk Shifter, Not for Use with Allison 1000 & 2000 Series Transmission

CLUTCH Omit Item (Clutch & Control)

AXLE, REAR, TANDEM {Meritor RT-46-160} Single Reduction, 46,000-lb Capacity, 200 Wheel Ends . Gear Ratio: 4.89

Description

SUSPENSION, REAR, TANDEM {Hendrickson HMX EX 460} Walking Beam, 46,000-lb Capacity, 54" Axle Spacing, Rubber Springs, with Transverse Torque Rods, Rubber End Bushings

TRANSVERSE TORQUE RODS {Hendrickson} TRAAX Rod, Transverse Only

AXLE, FRONT NON-DRIVING {Meritor MFS-18-133A} Wide Track, I-Beam Type, 18,000-lb Capacity

SUSPENSION, FRONT, SPRING Multileaf, Shackle Type, 18,000-lb Capacity, Less Shock Absorbers

SHOCK ABSORBERS, FRONT

SPRINGS, FRONT AUXILIARY Rubber

CAB Conventional, Day Cab

ACCESS, CAB Steel, Driver & Passenger Sides, Two Steps per Door, for use with Day Cab and Extended Cab

AIR CONDITIONER with Integral Heater and Defroster

CAB INTERIOR TRIM Classic, for Day Cab

Includes

: CONSOLE, OVERHEAD Molded Plastic with Dual Storage Pockets, Retainer Nets and CB Radio Pocket; Located Above Driver and Passenger

: DOME LIGHT, CAB Door Activated and Push On-Off at Light Lens, Timed Theater Dimming, Integral to Overhead Console, Center Mounted

: SUN VISOR (2) Padded Vinyl; 2 Moveable (Front-to-Side) Primary Visors, Driver Side with Toll Ticket Strap

CAB REAR SUSPENSION Air Bag Type

GAUGE CLUSTER Base Level; English with English Electronic Speedometer

Includes

: GAUGE CLUSTER DISPLAY: Base Level (3" Monochromatic Display), Premium Level (5" LCD Color Display); Odometer, Voltmeter, Diagnostic Messages, Gear Indicator, Trip Odometer, Total Engine Hours, Trip Hours, MPG, Distance to Empty/Refill for

: GAUGE CLUSTER Speedometer, Tachometer, Engine Coolant Temp, Fuel Gauge, DEF Gauge, Oil Pressure Gauge, Primary and Secondary Air Pressure

: WARNING SYSTEM Low Fuel, Low DEF, Low Oil Pressure, High Engine Coolant Temp, Low Battery Voltage (Visual and Audible), Low Air Pressure (Primary and Secondary)

GAUGE, OIL TEMP, AUTO TRANS for Allison Transmission

GAUGE, OIL TEMP, REAR AXLE

INSTRUMENT PANEL Flat Panel

IP CLUSTER DISPLAY On Board Diagnostics Display of Fault Codes in Gauge Cluster

MIRRORS (2) C-Loop, Power Adjust, Heated, Black Heads and Arms, 7.5" x 14" Flat Glass, Includes 7.5" x 7" Convex Mirrors, for 102" Load Width

Notes

: Mirror Dimensions are Rounded to the Nearest 0.5"

MIRROR, CONVEX, HOOD MOUNTED {Lang Mekra} (2) Right and Left Sides, Black 7.5" Sq.

MONITOR, TIRE PRESSURE Omit

SEAT, DRIVER {National 2000} Air Suspension, High Back with Integral Headrest, Vinyl, Isolator, 1 Chamber Lumbar, with 2 Position Front Cushion Adjust, -3 to +14 Degree Angle Back Adjust

SEAT, PASSENGER {National} Non Suspension, High Back, Fixed Back, Integral Headrest, Vinyl

WINDOW, POWER (2) and Power Door Locks, Left and Right Doors, Includes Express Down Feature

FRAME RAILS Heat Treated Alloy Steel (120,000 PSI Yield); 10.125" x 3.580" x 0.312" (257.2mm x 90.9mm x 8.0mm); 480.0" (12192) Maximum OAL

Description

FRAME REINFORCEMENT Full Outer C-Channel, Heat Treated Alloy Steel (120,000 PSI Yield), 10.813" x 3.892" x 0.312" (274.6mm x 98.8mm x 7.9mm), 480.0" (12192mm) OAL

BUMPER, FRONT Swept Back, Steel, Heavy Duty

FRAME DIMPLE Dimple on Left and Right Top Flange of Frame Rail to Reference Rear Axle Centerline

TOW HOOK, FRONT (2) Frame Mounted

WHEELBASE RANGE 221" (560cm) Through and Including 262" (665cm)

BRAKE SYSTEM, AIR Dual System for Straight Truck Applications

Includes

: BRAKE LINES Color and Size Coded Nylon

: DRAIN VALVE Twist-Type

: GAUGE, AIR PRESSURE (2) Air 1 and Air 2 Gauges; Located in Instrument Cluster

: PARKING BRAKE CONTROL Yellow Knob, Located on Instrument Panel

: PARKING BRAKE VALVE For Truck

: QUICK RELEASE VALVE On Rear Axle for Spring Brake Release: 1 for 4x2, 2 for 6x4

: SPRING BRAKE MODULATOR VALVE R-7 for 4x2, SR-7 with relay valve for 6x4/8x6

AIR BRAKE ABS {Bendix AntiLock Brake System} 4-Channel (4 Sensor/4 Modulator) Full Vehicle Wheel Control System

BRAKE, PARKING Manual Push-Pull Pneumatic Parking Brake

BRAKES, FRONT {Meritor 16.5X6 Q-PLUS CAST} Air S-Cam Type, Cast Spider, Fabricated Shoe, Double Anchor Pin, Size 16.5" X 6", 23,000-lb Capacity

BRAKE CHAMBERS, FRONT AXLE {Bendix} 24 Sqli

SLACK ADJUSTERS, FRONT {Haldex} Automatic

DUST SHIELDS, FRONT BRAKE for Air Cam Brakes

BRAKES, REAR {Meritor 16.5X8.625 Q-PLUS CAST} Air S-Cam Type, Cast Spider, Fabricated Shoe, Double Anchor Pin, Size 16.5" X 8.625", 23,000-lb Capacity per Axle

BRAKE CHAMBERS, REAR AXLE {Bendix EverSure} 30/30 Sqli Spring Brake

SLACK ADJUSTERS, REAR {Haldex} Automatic

DUST SHIELDS, REAR BRAKE for Air Cam Brakes

PARK BRAKE CHAMBERS, ADDITIONAL (2) Spring Brake Type

AIR COMPRESSOR {Cummins} 18.7 CFM

AIR DRYER {Bendix AD-9} with Heater

AIR DRYER LOCATION Mounted Inside Left Rail, Back of Cab

AIR TANK LOCATION (2) : One Mounted Under Each Rail, Front of Rear Suspension, Parallel to Rail

DRAIN VALVE {Berg} with Pull Chain, for Air Tank

STEERING GEAR (2) {Sheppard M100/M80} Dual Power

STEERING COLUMN Tilting

STEERING WHEEL 4-Spoke; 18" Dia., Black

DRIVELINE SYSTEM {Dana Spicer} SPL170 Main Driveline with SPL170 Interaxle Shaft, for 6x4

EXHAUST SYSTEM Horizontal Aftertreatment System, Frame Mounted Right Side Under Cab, for Single Vertical Tail Pipe, Frame Mounted Right Side Back of Cab

AFTERTREATMENT COVER Aluminum

Description

EXHAUST HEIGHT 10' 11"

MUFFLER/TAIL PIPE GUARD (1) Aluminum

RAIN CAP with Single Exhaust, Non-Bright Finish

TAIL PIPE (1) Straight Type

ELECTRICAL SYSTEM 12-Volt, Standard Equipment

Includes

: DATA LINK CONNECTOR For Vehicle Programming and Diagnostics In Cab

: HAZARD SWITCH Push On/Push Off, Located on Instrument Panel to Right of Steering Wheel

: HEADLIGHT DIMMER SWITCH Integral with Turn Signal Lever

: PARKING LIGHT Integral with Front Turn Signal and Rear Tail Light

: STARTER SWITCH Electric, Key Operated

: STOP, TURN, TAIL & B/U LIGHTS Dual, Rear, Combination with Reflector

: TURN SIGNAL SWITCH Self-Cancelling for Trucks, Manual Cancelling for Tractors, with Lane Change Feature

: WINDSHIELD WIPER SWITCH 2-Speed with Wash and Intermittent Feature (5 Pre-Set Delays), Integral with Turn Signal Lever

: WINDSHIELD WIPERS Single Motor, Electric, Cowl Mounted

: WIRING, CHASSIS Color Coded and Continuously Numbered

ALTERNATOR {Leece-Neville AVI160P2013} Brush Type, 12 Volt, 160 Amp Capacity, Pad Mount, with Remote Sense

ANTENNA Shark Fin, Roof Mounted

BACK-UP ALARM Electric, 102 dBA

BATTERY BOX Steel, with Aluminum Cover, 14" Wide, 2-3 Battery Capacity, Mounted Left Side Under Cab

BATTERY SYSTEM {JCI} Maintenance-Free, (3) 12-Volt 2100CCA Total, Top Threaded Stud

BODY BUILDER WIRING Back of Day Cab at Left Frame or Under Sleeper, Extended or Crew Cab at Left Frame; Includes Sealed Connectors for Tail/Amber Turn/Marker/ Backup/Accessory Power/Ground and Sealed Connector for Stop/Turn

CIRCUIT BREAKERS Manual-Reset (Main Panel) SAE Type III with Trip Indicators, Replaces All Fuses

CIGAR LIGHTER Includes Ash Cup

CLEARANCE/MARKER LIGHTS (5) {Truck Lite} Amber LED Lights, Flush Mounted on Cab or Sunshade

HEADLIGHTS Halogen

HORN, AIR Single Trumpet, Black, with Lanyard Pull Cord

HORN, ELECTRIC (2) Disc Style

INDICATOR, LOW COOLANT LEVEL with Audible Alarm

RADIO AM/FM/WB/Clock/Bluetooth/USB Input/Auxiliary Input

SPEAKERS (2) 6.5" Dual Cone Mounted in Doors

STARTING MOTOR {Delco Remy 39MT} 12 Volt, Gear Reduced, with Thermal Over-Crank Protection

SWITCH, AUXILIARY Accessory Control; for Wiring in Roof, with Maximum of 20 amp Load with Switches In Instrument Panel

TAIL LIGHT WIRING MODIFIED Includes: Wiring for Standard Lt & Rt Tail Lights; Separate 8.0' of Extra Cable Wiring for Lt & Rt Body Mounted Tail Lights

TURN SIGNALS, FRONT Includes LED Side Turn Lights Mounted on Fender

FRONT END Tilting, Fiberglass, with Three Piece Construction, for WorkStar/HV

GRILLE Stationary, Chrome

INSULATION, SPLASH PANELS for Sound Abatement

Description

INSULATION, UNDER HOOD for Sound Abatement

LOGOS EXTERIOR Model Badges

LOGOS EXTERIOR, ENGINE Badges

COMMUNICATIONS MODULE Telematics Device with Over the Air Programming; Includes Five Year Data Plan and International 360

DUAL DRIVE Customer Does Not Intend to Convert to In-Cab Dual Drive Positions

PAINT SCHEMATIC, PT-1 Single Color, Design 100

Includes

: PAINT SCHEMATIC ID LETTERS "WL"

PAINT TYPE Base Coat/Clear Coat, 1-2 Tone

FUEL TANK Top Draw, Non-Polished Aluminum, 24" Dia, 50 US Gal (189L), Mounted Left Side, Under Cab

DEF TANK 5 US Gal (19L) Capacity, Frame Mounted Outside Left Rail, Under Cab

FUEL/WATER SEPARATOR {Racor 400 Series} with Primer Pump, Includes Water-in-Fuel Sensor, Mounted on Engine

WHEELS, FRONT {Accuride 29039} DISC; 22.5x9.00 Rims, Powder Coat Steel, 5-Hand Hole, 10-Stud, 285.75mm BC, Hub-Piloted, Flanged Nut, with Steel Hubs, Non-Standard Offset, with .5" Thick Disc

(2) TIRE, FRONT 315/80R22.5 Load Range L HAU 3 WT (CONTINENTAL), 480 rev/mile, 68 MPH, All-Position

WHEELS, REAR {Maxion 91541} DUAL DISC; 22.5x8.25 Rims, Painted Steel, 2-Hand Hole, 10-Stud, 285.75mm BC, Hub-Piloted, Flanged Nut, with Steel Hubs

(8) TIRE, REAR 11R22.5 Load Range G HDR2+ (CONTINENTAL), 491 rev/mile, 75 MPH, Drive

WHEEL, SPARE, DISC {Accuride 29039} 22.5x9.00 Rims, Powder Coat Steel, 10-Stud, 285.75mm BC, Hub-Piloted, for Front Application Only

PAINT IDENTITY, REAR WHEELS Disc Rear Wheels; with Vendor Applied White Powder Coat Paint

Services Section:

WARRANTY Standard for HV507, HV50B, HV607 Models, Effective with Vehicles Built July 1, 2017 or Later, CTS-2025A

Township of Haverford

Haverford Township Parks and Recreation Department

Date: September 30, 2024

To: David R. Burman, Township Manager

From: Brian Barrett, Director of Parks and Recreation

Subject: Park Fencing, Ballfield Lighting, Basketball Court Work, Playground Equipment

Attached are the following quotes received:

Replacement fencing around the tennis court and skate park at Merry Place. The quote is for \$48,120.00 and work will be done by Miller Sports Construction under Costars #008-E22-184

Replacement sideline fencing and new baseball cages at Paddock and Elwell Park. Both jobs will be done by Millers Sports Construction Costars #008-E22-184. Paddock is \$46,980.00 and Elwell is \$68,350.00.

For baseball field lighting from NGU at Jack McDonald Field. Quote in the amount of \$237,000.00, under Sourcewell Contract #: 041123-CPL.

From Top A Court for the removal of Brookline Basketball Court. The quote is for \$16,280.00, under Sourcewell #031022-AST.

From Top A Court for new circular half court basketball court at Brookline Park. The quote is for \$39,880.00, under Sourcewell #031022-AST

For new playground equipment at Bailey Park. The quotes are for \$16,592.00, Chatham Glen quote is for \$16,593.00 and various parks \$30,004.00, under Recreation Resource CoStars #014-E22-249.

If there are any questions I will be on hand for the Board of Commissioner Work Session on October 7, 2024.

COSTARS PROPOSAL

SPORTS CONSTRUCTION DIVISION
Athletic Surfaces & Equipment

TO: BRIAN BARRETT - HAVERFORD TOWNSHIP

FROM: KEVIN CUNNINGHAM

JOB: MERRYS PLACE PARK FENCE PROJECT

DATE: AUGUST 24, 2024

The following proposal has been prepared to replace the existing tennis court and skate park fences at Merry's Place Park on Glendale Road in Havertown, PA. Miller Sports Construction (MSC) proposes to supply all materials, and proposes equipment necessary to complete the work as further specified:

COSTARS Contract Pricing: The following pricing is based on CoStars pricing structure. Costars is a Pennsylvania State approved cooperative purchasing platform. Miller Sports Construction, West Chester, PA is authorized under CoStars contract number 008-E22-184 (Maintenance, Repair & Operation (MRO)). Costars is a procurement cooperative which provide predetermined preferential pricing. The products/resources contained with the program inventory have been bid, vetted, and approved by the buying cooperative, allowing the purchasing facility/customer to use in lieu of a formal bid process.

Costars: Contract #: 008-E22-184 – Maintenance, Repair & Operation (MRO)

SCOPE OF WORK - Merry's Place Park Fence Project

1. Supply and install fencing to replace the existing tennis court and skate park fences.
2. The new fence around the tennis courts would be approximately 60' by 120' (four sided) and would be 10' high. The fence around the skate park would be approximately 60' by 120' (three sided) and would be 8' high. Three gates would be installed in the fence. All materials would be black and three 4' wide single swing gates would be installed in these fences.
3. We would remove the existing fabric and rail, and cut the existing posts off at ground level. New 2-1/2" OD and 3" OD black powder coated posts would be sleeved into the existing post footings. A top rail, bottom rail and brace rails would then be installed, along with new 10' high, #8 gauge, 1-3/4" black vinyl mesh fabric (tennis court) and 8' high, #8 gauge, 2" black vinyl mesh for the skate park. The fittings for the bottom rail would be installed over the welds on the posts. The fabric would be a heavy duty (#8 gauge) fabric. Any existing materials would be removed from the job site.
4. The posts would be ss40, 2-1/2" OD and ss40, 3" OD powder coated pipe that would be sleeved into the existing post footings. The top rail, bottom rail and braces would be a ss20, 1-5/8" OD powder coated pipe and the fabric would be either a 10' high, #8 gauge (#9 gauge core), fused, 1-3/4" black vinyl mesh fabric or an 8' high, #8 gauge (#9 gauge core), 2" black vinyl fabric. The gates would be fabricated using ss20, 1-5/8" OD powder coated pipe and hang on box hinges. All fittings would be steel and all materials would be black.

COSTARS PROPOSAL

SPORTS CONSTRUCTION DIVISION
Athletic Surfaces & Equipment

Notes-

1. Please note that this price is based on prevailing wage labor rates.
2. A visit to the job site before start of work would be needed to confirm this price.
3. Any permits would be the responsibility of the customer.
4. If needed, an insurance certificate can be provided.
5. A lift would be used to remove and then install the cages and fence, some remedial work on the ground of the cages may need to be done by others.

TERMS & CONDITIONS: In accepting this proposal, the Owner/Customer agrees and accepts the following:

- Customer/Owner responsible for:
 - Removal of all equipment prior to MSC arrival/site mobilization
 - Proper lighting, electric supply, as applicable to the scope of work, water supply
 - Access to and use of project site restrooms
 - Security of the project site/space during work period, including appropriate signage, as applicable
 - 24/7 access to project site, as needed
 - Tax exempt certificate
 - Permits, as applicable
 - Underground lines need to be marked out by the participating utilities
 - All clearing of brush or trees from the fence line
 - Any completion date given is subject to change because of adverse weather conditions, site conditions/and or any condition, not controlled by MSC that might alter MSC's ability to perform its work. MSC will not be responsible for delays due to these conditions.

COSTARS PROPOSAL

SPORTS CONSTRUCTION DIVISION
Athletic Surfaces & Equipment

TO: BRIAN BARRETT - HAVERFORD TOWNSHIP

FROM: KEVIN CUNNINGHAM

JOB: PADDOCK PARK FENCE PROJECT

DATE: JULY 25, 2024

The following proposal has been prepared to replace the existing baseball cage and sideline fences at the Paddock Park baseball field in Havertown, PA Miller Sports Construction (MSC) proposes to supply all materials, and proposes equipment necessary to complete the work as further specified:

COSTARS Contract Pricing: The following pricing is based on CoStars pricing structure. Costars is a Pennsylvania State approved cooperative purchasing platform. Miller Sports Construction, West Chester, PA is authorized under CoStars contract number 008-E22-184 (Maintenance, Repair & Operation (MRO)). Costars is a procurement cooperative which provide predetermined preferential pricing. The products/resources contained with the program inventory have been bid, vetted, and approved by the buying cooperative, allowing the purchasing facility/customer to use in lieu of a formal bid process.

Costars: Contract #: 008-E22-184 – Maintenance, Repair & Operation (MRO)

SCOPE OF WORK - Paddock Park Fence Project

1. Supply and install fencing to replace the existing baseball cage and sideline fences at the Paddock Park baseball field in Havertown, PA.
2. The baseball cage is 17' across the back, 17' on the two sides, and 26' wide across the front with the front of the cage 20' high and the back of the cage 12' high. A 40' long section of 8' high fence would be installed off of the front of each side of the cage along with 35' of 6' high chain link fence on the 1st base side and 70' of 4' chain link fence on the 3rd base side. The existing batting areas would be removed, with the new 8', 6' and 4' fences to be installed in approximately the same location as the existing fences.
3. We would remove the existing posts, wire and rail from the existing baseball cage and remove the existing 4', 6' and 8' fence completely. With the cage, new posts would then be welded and installed in the existing post footings, with new rail, wire and fittings installed on the fence and cage. The cage would have two trusses across the roof for support, and would have the same layout and look as the existing cage. The sideline fences would be set in approximately 36" of concrete, with the 6' and 8' fence to have a bottom rail along with a top rail and braces, the 4' high fence would have only top rail. All new materials would be black (either powder coated or vinyl).
4. The 4' and 6' high fences the posts would be ss40, 2-1/2" OD line and terminal posts that would be set in approximately 36" of concrete. The top rail (bottom rail and braces - 6' fence) would be a ss20, 1-5/8" OD powder coated pipe with the fabric to be either a 4' or 6' high, #8 gauge (#9 gauge core), 2" fused black vinyl mesh fabric. All materials would be black (either vinyl or powder coated) and all fittings would be steel.
5. The 8' high fence the posts would be ss40, 2-1/2" OD line and ss40, 3" OD terminal posts that would be set in approximately 36" of concrete. The top rail, bottom rail and braces would be a ss20, 1-5/8" OD powder coated pipe with the fabric to be an 8' high, #8 gauge (#9 gauge core), 2" fused black vinyl mesh fabric. All materials would be black (either vinyl or powder coated) and all fittings would be steel.
6. The posts for the baseball cage would be ss40, 3" OD line and ss40, 4" OD terminal posts that would be welded and sleeved into the existing post footings. The top, middle and bottom rails along with the roof rail and the trusses would be a ss20, 1-5/8" OD powder coated pipe, with the trusses to be welded and all roof pipe to have the fittings tech screwed in place. The fabric on the bottom of the cage would be a 12' high, #5 gauge (#6 gauge core), with the rest of the fabric to be an #8 gauge (#9 gauge core), 2" fused black vinyl mesh fabric. All materials would be black (either vinyl or powder coated) and all fittings would be steel.

TO: BRIAN BARRETT - HAVERFORD TOWNSHIP

FROM: KEVIN CUNNINGHAM

JOB: ELWELL FIELD FENCE PROJECT

DATE: JULY 25, 2024

The following proposal the replace the existing baseball cage and sideline fences at the Elwell Field baseball field in Ardmore, PA. Miller Sports Construction (MSC) proposes to supply all materials, and proposes equipment necessary to complete the work as further specified:

COSTARS Contract Pricing: The following pricing is based on CoStars pricing structure. Costars is a Pennsylvania State approved cooperative purchasing platform. Miller Sports Construction, West Chester, PA is authorized under CoStars contract number 008-E22-184 (Maintenance, Repair & Operation (MRO)). Costars is a procurement cooperative which provide predetermined preferential pricing. The products/resources contained with the program inventory have been bid, vetted, and approved by the buying cooperative, allowing the purchasing facility/customer to use in lieu of a formal bid process.

Costars: Contract #: 008-E22-184 – Maintenance, Repair & Operation (MRO)

SCOPE OF WORK - Elwell Field Fence Project

1. Supply and install fencing to replace the existing baseball cage and sideline fences at the Elwell Field baseball field in Ardmore, PA.
2. The baseball cage is 20' across the back, 20' on the two sides, and 26' wide across the front with the front of the cage 20' high and the back of the cage 12' high. The field has two 65' long by 20' high side line fences (one on each side of the field) and two 40' long sections of 12' high fence that start at the end of each section of 20' high fence.
3. We would remove the existing wire and rail from the existing baseball cage, the two 65' long by 20' high two sideline fences along with the two 40' long by 12' high extended sideline fences. New posts would then be welded and sleeved into the existing post footings, with new rail, wire and fittings installed of the fence and cage. The cage would have two trusses across the roof for support, and would have the same layout and look as the existing cage. All new materials would be black (either powder coated or vinyl).
4. The posts for the baseball cage would be ss40, 3" OD line and ss40, 4" OD terminal posts that would be welded and sleeved into the existing post footings. The top, middle and bottom rails along with the roof rail and the trusses would be a ss20, 1-5/8" OD powder coated pipe, with the trusses to be welded and all roof pipe to have the fittings tech screwed in place. The fabric on the bottom of the cage would be a 12' high, #5 gauge (#6 gauge core), with the rest of the fabric to be an #8 gauge (#9 gauge core), 2" fused black vinyl mesh fabric. All materials would be black (either vinyl or powder coated) and all fittings would be steel.
5. The 12' high fence the posts would be ss40, 2-1/2" OD line and ss40, 3" OD terminal posts that would be welded and sleeved into the existing post footings. The top rail, bottom rail and braces would be a ss20, 1-5/8" OD powder coated pipe with the fabric to be a 12' high, #8 gauge (#9 gauge core), 2" fused black vinyl mesh fabric. All materials would be black (either vinyl or powder coated) and all fittings would be steel.
6. The 20' high fence the posts would be ss40, 3" OD line and ss40, 4" OD terminal posts that would be welded and sleeved into the existing post footings. The top rail, bottom rail and braces would be a ss20, 1-5/8" OD powder coated pipe with the fabric to be an #8 gauge (#9 gauge core), 2" fused black vinyl mesh fabric. The swing gates would be fabricated using ss20, 1-5/8" OD powder coated pipe and hang on box hinges All materials would be black (either vinyl or powder coated) and all fittings would be steel.

OUR COMMITMENT

NGU Sports Lighting is a leading provider of high-quality sports lighting solutions. With a strong focus on innovation and cutting-edge technology, NGU Sports Lighting specializes in optimizing customer experience. This is done by defining current needs, designing a customized solution, and installing a state-of-the-art lighting systems for a verity sports facilities.

Our company is committed to enhancing the visibility, safety, and overall experience of athletes, spectators, and officials during any type of event. NGU Sports Lighting offers a comprehensive range of lighting solutions tailored to meet your specific requirements and expectations. Our team of experts work closely with clients to assess their needs, taking into account factors such as field size, sport-specific lighting standards, energy efficiency, and budget constraints. By leveraging our **extensive industry knowledge and expertise**; we are able to deliver customized lighting solutions that optimize visibility, minimize glare and spill, while providing uniform illumination across any surface.

In addition to our commitment to performance and quality, NGU Sports Lighting also prioritizes **energy efficiency and sustainability**. We utilize advanced lighting technologies, such as LED, to minimize energy consumption and reduce environmental impact. Our lighting solutions are designed to provide long-lasting performance, requiring minimal maintenance and offering significant cost savings over time.

NGU Sports Lighting takes pride in our ability to deliver turnkey lighting solutions, from initial design and engineering to installation and ongoing support. We recognize that creating a brand-new lighting strategy for any venue is a significant task, especially when you are busy overseeing other critical matters. As a company that helped introduce LED Sports Lighting to the industry over a decade ago and with over 100 years of combined experience; our team of professionals are dedicated to providing exceptional customer service and **ensuring complete satisfaction throughout the entire project lifecycle**.

Your project experience is our top priority.

Your conversion project will be executed in 3-steps:

Evaluate. Design. Implement.

A proof positive process to give you the very best experience.

SYSTEM BENEFITS

LOWER OPERATIONAL COSTS

Operational Efficiency - The Ephesus Sports Lighting System is on average 45% more energy efficient than other solid-state lighting systems. Making the Ephesus solution the most efficient sports system in the marketplace.

HIGHER PERFORMANCE AND RELIABILITY

System Reliability – Designed and manufactured to the highest reliability standards in the marketplace. The system uses chip on board innovation; which has a much higher performance reliability than the soldered LED chip method used by other manufacturers.

SUPERIOR OPERATIONAL FLEXIBILITY

Enhanced System Control – The new system provides individual fixture control with full dimming capabilities. The system can be controlled wirelessly from any handheld device, PC or LAN connected device. It's simple to use and provides the owner with the most user flexible system on the market.

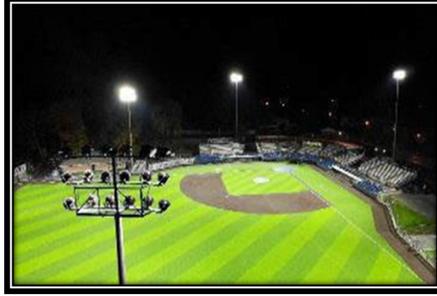

RECREATIONAL EXPERIENCE

TOTAL CONTROL OF POLES & ZONES

INGU
SPORTS LIGHTING

NEVER GIVE UP.

PROJECT DETAILS

From start to finish, we take your ideas and turn them into reality...

PROJECT NAME: McDonald Field

Sourcewell Contract #: 041123-CPL

PROJECT OVERVIEW

We are pleased to provide you with an Offer of Business for your Baseball Field. NGU will provide you with light levels that are sufficient with your needs related to design #: LD24963

[McDonald Field:]

Scope Summary:

We are pleased to provide you with an Offer of Business for your Baseball Field. The light levels will be in accordance with lighting design LD24963, meeting an average of 50/30 foot-candles.

NGU will provide all necessary labor and materials for the installation of the Ephesus solid-state LED sports lighting system. This system can be controlled with our wireless communication system, which includes remote programming for up to eight dynamic lighting scenes and user training.

The new system will include the following materials and services:

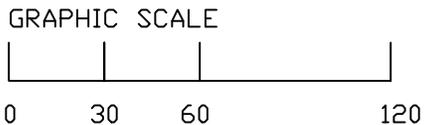

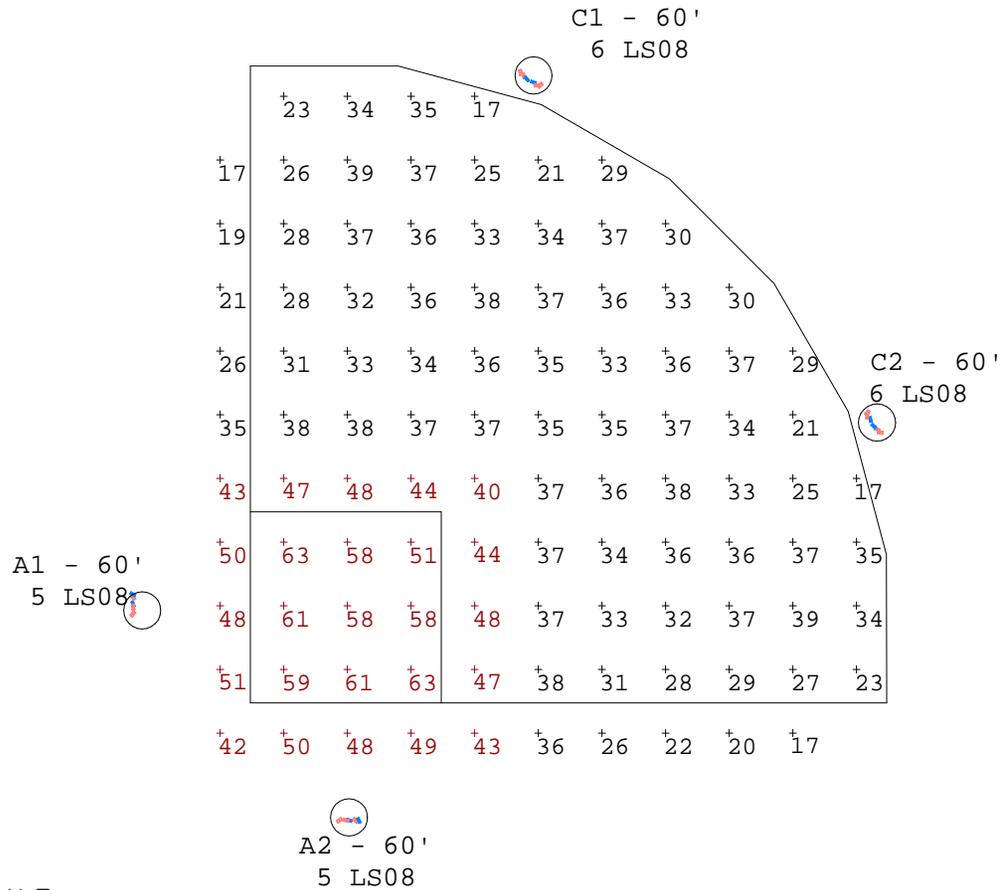

- Ephesus Solid-State LED Sports Lighting Lumasport 8 Fixtures
- New cross arms
- New poles
- Lighting design
- AirMesh wireless control system
- Installation of the new LED fixtures, cross arms, poles and control system
- Fixture aiming, control commissioning and user training
- 10-year material manufacturer warranty (labor warranty available upon request)

TOTAL: \$237,000.00

Does not include sales tax

RE: Haverford Township Free Library Renovation & Addition Project- Construction Change Orders

Mr. Burman,

Below is a summary of change orders we have reviewed and are recommending for approval by the Board of Commissioners. There is an explanation of each change as well as the detailed back-up for the costs.

For **Rycon Construction** contract these change order requests total a credit of **(\$17,362.50) (Seventeen thousand three hundred sixty-two dollars & fifty cents)** and will be part of a change order to their contract.

For **Dolan Mechanical (HVAC)** contract these change order requests total an add of **\$5,217.10 (Five thousand two hundred seventeen dollars & ten cents)** and will be part of a change order to their contract.

For **AJM Electric (Electrical)** contract these change order requests total an add of **\$16,887.63 (Sixteen thousand eight hundred eighty-seven dollars & sixty-three cents)** and will be part of a change order to their contract.

The remaining project contingency is currently at \$197,098.00.

Please let us know if you have any questions or comments.

Sincerely,

Kenneth C. Matthews

Kenneth C. Matthews
C.B. Development Services, Inc.

CC: Aimee Cuthbertson, Sukrit Goswami

Rycon Construction Change Request #15 for an add of \$8,567.40.

The cost included is for work associated with Bulletin #7 which added a drywall chase at the first and second floors to accommodate the new lower-level oven range exhaust to the exterior and a new stormwater pipe needed for the old bank building roof drains. The cost submitted and attached for reference is fair and reasonable.

Rycon Construction Change Request #37 for a credit of (\$54,744.90).

The cost included is for work associated with removing the spray foam insulation called out in the contract documents for the underside of the roof decking at the 1979 addition to achieve the necessary thermal rating needed per design. As reviewed with the Library/design team/Roofing Consultant, in lieu of this spray foam it was determined to remove the existing epdm rubber membrane roofing, install additional insulation, and new epdm roof. The recommendation letter for the cost of this new roof is being presented under a separate recommendation letter this month to the Board of Commissioners. The cost submitted and attached for reference is fair and reasonable.

Rycon Construction Change Request #49 for a credit of (\$42,185.00).

The cost included is for work associated with the G19 allowance for floor patching built into the contract. Upon review in field and confirmation on the scope of work with Rycon and their flooring subcontractor a cost was provided for what is needed to prepare the existing concrete to receive the new flooring. The remaining allowance funds are thus not needed so they are being credited back to the owner. The cost submitted and attached for reference is fair and reasonable.

Rycon Construction Change Request #50 for a Not To Exceed add of \$71,000.00.

The cost included is for work associated with Bulletin #11 which is requiring additional metal framing and metal decking at the original bank building roof. In review by the project structural engineer, it was determined that the existing roof structure material did not provide the necessary strength and reinforcing was needed. The cost submitted and attached for reference is fair and reasonable.

Dolan Mechanical (HVAC) Construction Change Request #5 for an add of \$5,217.10.

The cost included is for work associated with Bulletin #10 in which new ductwork was added at the Innovation Zone to accommodate the laser and 3D printers. The contract documents called out exhaust fans in the Innovation Zone but no ductwork was shown as the extent of the equipment to be installed was not known at bid time. The costs submitted and attached for reference are fair and reasonable.

AJM Construction Change Request #10 for an add of \$4,254.00.

The cost included is for work associated with Bulletin #10 which combined the Janitor/Storage Rooms at the first and second levels. In review with the Library/design team it was determined that combining the rooms would make for more usable storage space that is really needed. This cost is to relocate conduit previously installed and add conduit to accommodate the rooms being combined. The cost submitted and attached for reference is fair and reasonable.

AJM Construction Change Request #12 for an add of \$12,633.63.

The cost included is for work associated with Bulletin #10. This cost is to wire all the building sump pumps to an exterior plug-in receptacle so a temporary generator can be hooked up to run them should the back-up sump pumps ever fail. The cost submitted and attached for reference is fair and reasonable.

Haverford Township - Board of Commissioners

Meeting: **Tuesday, November 12, 2024

Time: 7:00 p.m.

Location: Commissioners Meeting Room -1014 Darby Rd., Havertown PA, 19083

Motion to award a contract in the amount of \$41,815.15 for the upfitting, purchase and installation of emergency lighting for (2) Chevrolet Blazer EVs to Havis, Inc under CoStars Contract #012-E24-365.

Emergency Medical Services:

Motion to award a contract in the amount of \$142,250 to remount / refurbish one (1) Emergency Medical Services chassis to Pfund Superior Sales, under a specialized service exemption.

Motion to award a contract in the amount of \$54,978.06 (net of \$8,000 trade in and disposal of current system) for the purchase of (2) Stryker PowerLoad Systems to Stryker Medical, under a specialized service exemption.

Parks:

Motion to award a Contract in the amount of \$237,000 for the Brookline Park Stormwater Facilities Project to Frania, Inc., submitting the lowest responsible bid.

Economic Development:

Motion to enter into a formalized professional services agreement with Discover Haverford for the provision of economic recovery and development activities within the business districts of Haverford Township for the period January 1, 2025 through December 31, 2025 and January 1, 2026 through December 31, 2026 at a fixed fee of \$110,000 and \$115,000 per year, respectively.

Motion to approve a change order in the amount of \$13,509.50 for light fixtures to be installed as part of the Darby Rd Streetscape – Phase 3 Project to Cooper Electric in the amount of \$13,509.50 due to new PennDot specifications for light fixtures on state highways.

17. Adjourn

Haverford Township Board of Commissioners Regular Meeting Minutes

Meeting: Tuesday, November 12, 2024

Location: Commissioners Meeting Room
1014 Darby Road
Havertown, PA 19083

President of the Board, Larry Holmes, opened the meeting and announced that the Board met in Executive Session to discuss litigation immediately prior to this meeting, and there was no work session held prior for the month of November.

Roll Call - All Commissioners were present at roll call: Commissioners Gondek, Forst-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta and Holmes.

Also present were Township Manager David R. Burman, Township Solicitor John Walko, Esq., Assistant Township Manager Aimee M. Cuthbertson, CPA, Chief of Police John Viola, Paramedics Deputy Chief Victor Berg, Director of Community Development Jaime Jilozian, Parks and Recreation Director Brian Barrett, and David Pennoni, Pennoni Associates.

Chief Viola led the Pledge of Allegiance.

Presentation:

Ice Rink Advisory Board Project Summary

Barbara Latsios, an Ice Rink Advisory Board member, summarized the proposed renovations for the Skatium locker rooms. The plans would include locker rooms for mixed-gender teams, a locker room for referees and a vanity area for ice skaters. The project is expected to be completed by the summer of 2025. She thanked the Board of Commissioners for their support of the project.

Citizens' Forum:

Peter Diskin voiced his concerns about the traffic study results and enforcement of law, noting especially the danger of the intersection of Colfax and Darby.

Mike Lee also spoke of the traffic study and the proposed Resolution 2407-2024, questioning how state roads would be regulated through the Resolution.

Dori Doughty asked the Board to postpone voting on Resolution 2407-2024 so that the Board may receive more feedback from the community.

Donna Rabina thanked the Township for their work but pointed out the poor paving quality of utility companies after completing work under roads. She asked the Board to potentially modify the ordinance regulating road openings to not allow half-paving to refinish roads.

Jim DeMarco voiced his frustration at the noise from the pickle ball courts at Paddock Park. He suggested either using soft balls on the courts or moving the courts altogether.

Jeremy Beha endorsed the renovation of the Skatium.

Jeff Brody also endorsed the renovation of the Skatium.

Paul Kelly asserted that the Township was violating its own noise ordinance at the pickle ball courts.

Adam Terranova supported the Skatium renovation project.

Chris Beer voiced his worries about the traffic study and supported the idea that the roads are dangerous for children.

Beverly Byer, a crossing guard at the Township, voiced her concerns about reckless driving in the Township.

Victor Cortese also noted the results of the traffic study.

Will Hitchcock discussed the storm water ordinance, citing concerns about water runoff from one property to another.

Bureau of Fire Update:

Commissioner Gondek reported for October of 2024. Total incidents were 86: 73 in the Township and 13 out of the Township. The average personnel per call are 20. There were 1,727 personnel hours committed to incidents. 1,006 personnel hours committed to training, and the Havertown County Bureau of Fire provided mutual aid to 4 working fires within Delaware County.

Township Auditor Update

Township Auditor Anderson reported that he has reviewed the warrants and expenditures, found no irregularities, and all of his questions were answered to his satisfaction. He also noted that he hoped the street study took account for electric scooters and bicycles.

Township Manager Update

Township Manager Burman provided an update on the Darby Creek Trail, noting that Phase 2 of the southern extension by Merry Place will begin this week and compromise parking for 4-6 weeks. He also provided an update on the leaf collection schedule. He highlighted the tree planting at Thompson Track off Eagle Road. Finally, he announced that the Township email system has been down for the last 48 hours, and to have patience while the issue is resolved. Commissioner Holmes noted that the email system issue is also affecting the Commissioners, and Commissioner Gondek added that some emails may be permanently lost, and residents should use an alternate email or a phone number to reach out to their Commissioners.

Approval of Minutes:

Commissioner Quinn moved to approve the Regular Meeting Minutes of October 1st, 2024. Commissioner Hart seconded. Commissioner Trombetta asked to amend the minutes to add that P8-2024 was tabled. Commissioner Gondek moved to approve the amended Minutes and Commissioner Hart seconded. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner McCloskey moved to approve the following warrant #11-2024 totaling \$5,684,684.46:

Description	Amount
General & Sewer fund Payroll warrant for October 24, 2024, in the amount of	\$837,479.08
General & Sewer fund Payroll warrant for November 7, 2024, in the amount of	\$801,124.06
General Fund disbursements in the amount of	\$1,256,923.17
Sewer Fund disbursements in the amount of	\$278,279.56
Community Development Block Grant Fund disbursement in the amount of	\$53,927.55
Capital Projects Fund disbursement in the amount of	\$1,490,973.25
American Rescue Plan Fund disbursement in the amount of	\$950,223.62
Credit Card Statement ending October 27, 2024, in the amount of	\$15,754.17

Commissioner Cavender seconded the motion. There were no comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender,

Quinn, Hart, McCollum, Trombetta, Holmes.

Ordinances and Resolutions:

Commissioner Trombetta moved adopt the first reading of Ordinance No. P8-2024, amending Chapter 78, Erosion and Sediment. Commissioner Hart seconded the motion. Commissioner Trombetta asked for an explanation of self-regulation, which Commissioner Holmes explained was a way to create a system of plan approvals to go through the proper channels. Commissioner Gondek asked to confirm the final number of square feet required to necessitate a storm water management plan. Mr. Pennoni confirmed it would be set at 500 square feet. Commissioner Holmes explained that it was a way to ensure better planning for water runoff. Commissioner Gondek proposed to amend the ordinance to set the number of square feet to 1,000. Commissioner McCloskey objected, citing concerns about storm water running into neighboring properties. Commissioner Trombetta also rejected the amendment. Commissioner Holmes claimed that 500 square feet disproportionately affected people who owned small parcels, as it would make home improvements more difficult. Commissioner McCloskey noted a financial strain on the Township to have to redo storm water management. Commissioner Gondek agreed, citing aging infrastructure. Commissioner Forste-Grupp asserted her approval for the ordinance as it is. 5 Commissioners voted YES: Commissioners, Forste-Grupp, McCloskey, Cavender, Hart, Trombetta. 4 Commissioners voted NO: Commissioners Gondek, Quinn, McCollum, Holmes. The motion passed 5-4.

Commissioner Forste-Grupp moved to approve a second reading of Ordinance No. P13-2024, establishing stop intersections on Woodbine Road North at the intersection of Washington Avenue and on Paddock Road at the intersection of Marrybrook Drive, and special purpose parking zones in front of 606 Darby Road. Commissioner Gondek seconded the motion. There were no comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Cavender moved to adopt a first reading of Ordinance No. P14-2024, establishing timed parking zones at Polo Field, 109 County Line Road, and establishing special purpose parking zones in front of 65 Radnor Road. Commissioner Trombetta seconded the motion. Commissioner Cavender asked if it made sense to limit cars from parking in the bus zone at Polo Field. Chief Viola agreed that it did. Commissioner Cavender then moved to amend the Ordinance so that the Polo Field timed parking zones would be for school buses only from March to May from 3:00PM to 6:00PM on Mondays through Fridays. Commissioner Trombetta seconded the amendment. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Gondek moved to adopt Resolution No. 2402-2024, authorizing an additional \$1,475,000 from the American Rescue Plan Act to purchase emergency apparatuses as approved at the Board of Commissioners November 13, 2023 meeting. Commissioner Trombetta seconded the motion. Commissioner Gondek asked Township Manager Burman to refresh the public on the decision. Township Manager Burman explained that the purchase of the fire apparatuses was approved last year, and the best funding source was determined to be from the American Rescue Plan Act funds. He added that the purchases are in accordance with the realignment of the fleet as outlined in the previous fire audit. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Quinn moved to adopt Resolution No. 2407-2024, adopting the Township-wide Safety Action Plan using the Safe Systems Approach. This Resolution would permit the Township Manager to implement demonstration projects outlined in the Safety Action Plans to test safety interventions on selected Township Roads. Commissioner Trombetta seconded the motion. Commissioner Gondek noted that several speakers came to discuss the project, and so he clarified that there were two main outcomes from the Resolution: the first being that the Township is adopting and promising to reduce the number of injuries and death by a certain point in time, which is required by the federal government in order to secure certain grants. The second main outcome is that it allows the Township Manager to implement some demonstrations of public safety in the Township. Commissioner McCloskey agreed and added that none of the comments made today would not be able to be considered if the resolution was to pass, so it should be passed in order to move forward with traffic safety projects. Commissioner Forste-Grupp agreed to pass the Resolution and agreed to future discussion of solutions. Commissioner Trombetta moved to table the motion for a month in order to receive more input from the community. Commissioner Quinn seconded the motion. Commissioner Trombetta rescinded her motion in order for the Board to further discuss. Commissioner Holmes agreed that tabling the Resolution was the best course of action. Commissioner McCloskey disagreed, arguing that all the Resolution does was to agree to set a goal and allow for testing of plans. Commissioner Forste-Grupp added that the Resolution would allow the community to experience proposals for safer streets, which would also allow for more discussion and feedback. Commissioner Gondek asked what mechanism is in place to allow the topic to be discussed in subsequent meetings. Commissioner Holmes stated that anything can be put on an agenda without needing action to be taken. The topic can be put in future agendas to allow CH Planning and the comment to answer and ask questions about it. Commissioner Cavender also added that in the meantime, there would be a police presence at the intersection of Manoa and Eagle. Chief Viola mentioned that he was currently trying to have the traffic light readjusted to include a full walk cycle. Commissioner Quinn motioned to table the Resolution. Commissioner Holmes seconded the motion. 4 Commissioners voted YES: Commissioners Gondek, Quinn, Trombetta, Holmes. 5 Commissioners voted NO: Forste-Grupp, McCloskey, Cavender,

Hart, McCollum. The motion did not pass 4-5. With no further discussion, the original motion to adopt the resolution was voted on. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes. Commissioner Gondek asked to put the topic on the December meeting agenda. Commissioner Holmes agreed to have it be the first item for the December Regular Meeting, so public comment could be after.

Commissioner Gondek moved to adopt Resolution No. 2411-2024, authorizing the renovation of the Skatium locker rooms. Commissioner Hart seconded the motion. Commissioner Gondek thanked those involved in the project: The Ice Rink Advisory Board, Assistant Township Manager Aimee Cuthbertson, Township Manager Burman, and other Township employees involved. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2412-2024, authorizing an amount not to exceed \$142,000 from the Township's American Rescue Plan Act fund to refurbish 1 EMA apparatus and \$54,978 for the purchase of 2 Striker power load systems, net of \$88,000, and disposal of current systems. Commissioner Cavender seconded the motion. There were no questions or comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2414, authorizing Township Manager Burman to enter into a service agreement on behalf of the Township with the Commonwealth of Pennsylvania through its Department of Transportation for moving services in Haverford Township as outlined in Exhibits A and B of the attached Comprehensive Maintenance Services Agreement No. 3900040430 covering the period of January 1, 2025 to December 31, 2027. Commissioner Gondek seconded the motion. Commissioner Holmes asked if this was a standard agreement, which Township Manager Burman confirmed. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2415-2024, which would announce a public hearing of the Board of Commissioners on December 9, 2024 at 6:15 to consider an amendment of Ordinance 182 Zoning Section 182 106B to provide for new definitions related to building structures and lots, Section 182 711 related to accessory buildings and accessory structure regulations, and Section 182 8585 related to non-confirming structures. Commissioner Cavender seconded the motion. Commissioner Holmes asked Director of Community Development Jilozian to remind what the amendment would do. Director of Community Development Jilozian said that it would amend non-conformity and clarify more about accessory structures. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender,

Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2416-2024, authorizing application to the 2024 PECO Green Region Open Space Program Bonus Round for the Haverford Township Building Solar Installation Project. Commissioner Cavender seconded the motion. Commissioner Gondek asked to clarify if this Resolution applied to a specific project or just allowed for the application of grants for future projects. Township Manager Burman agreed it was for the latter. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2417-2024, authorizing for reimbursement from the Township's American Rescue Plan Act fund to the Haverford Township General Fund of \$9,240 for emergency sanitary sewer system repairs. 8 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta. Commissioner Holmes was called away from the meeting momentarily and therefore did not vote on this item.

Commissioner Cavender moved to adopt Resolution No. 2418-2024 for preliminary final land development plan approval for 938 square feet of addition and related improvements to the Quadrangle Arts Studio Center at 3300 Darby Road, Havertown, PA, known as DC Folio No. 220401800. Commissioner Hart noted that the applicant asked for a sidewalk waiver, which he opposed due to the need for walkability in the area. Solicitor Walko explained that they requested two additional waivers that morning. Attorney for the Quadrangle George Broseman asked for the waivers due to the undue hardship of a sidewalk project. Commissioner Forste-Grupp asked if the project plans could be projected so the public could see them. Commissioner Holmes called for a 5-minute recess to get the plans displayed. Broseman explained that additional sidewalks were not necessarily due to the internal paths of the Quadrangle. Commissioner Hart noted that modifying to only 100 yards of a pathway would be more cost-effective, but still allow for pedestrian traffic. He asked what the ordinance says about sidewalks, and Solicitor Walko explained that it requires sidewalk around the entire property. Commissioner Hart asked if there were other entrances to the reserve aside from Darby Road for residents. Broseman said that Quadrangle residents do not need access to the reserve due to the amenities provided by the Quadrangle. Commissioner Hart asked Chief Viola if there have been any incidents regarding Quadrangle residents due to a lack of sidewalks, and the Chief said there have not been. Broseman asked if there is a valid pathway that would not be as wide as the proposed sidewalk. Commissioner Hart asked if discussion could be held until both parties decided on an acceptable alternative or on a waiver. Commissioner Quinn moved to table the Resolution. Commissioner Gondek seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Hart moved to adopt Resolution No. 2419, authorizing the use of American Rescue Plan Act funds as follows: Brookline Park Stormwater Management Facilities in the amount of \$237,000; Supplemental Field Lighting at Jack McDonald Field in the amount of \$12,000; Freestanding playground equipment at various parks in an amount not to exceed \$10,000; and, Darby Creek Trail South Expansion Phase 2 in the amount of \$200,000. Commissioner Trombetta seconded the motion. There were no questions or comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2420-2024, authorizing the amount of \$23,484 from the American Rescue Plan Act fund for the purchase and installation of security and solar window tinting. Commissioner Cavender seconded the motion. Commissioner Holmes asked what the purpose of the tinting is. Chief Viola explained that it would act as bullet-proofing as well as keep police cooler in the summer. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner McCloskey moved to approve the Parking Lot Licensing Agreement with Karakung Swim Club for the term ending March 1, 2027. Commissioner Trombetta seconded the motion. Commissioner Hart asked if this would decrease parking issues, and Commissioner McCloskey agreed that it would. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Skatium Locker Room Renovation Project Contracts and Agreements

Commissioner Gondek moved to approve the professional services agreement with BKP Architects totaling \$26,500. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Gondek moved to approve the general construction contract with SB Conrad Inc. totaling \$739,000. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Gondek moved to approve the HVAC construction contract with Michael Mechanical Inc. totaling \$212,000. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Gondek moved to approve the electrical construction contract with AJM Electric Inc. totaling \$236,680. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender,

Quinn, Hart, McCollum, Trombetta, Holmes.

Library Renovation Project Contracts and Agreements

Commissioner Forste-Grupp moved to approve a contract with Detwiler Roofing in the amount of \$125,160 to replace the roof of the 1979 portion of the library building which was scheduled to remain under Co-Stars Contract No. 008-E22-762. Commissioner Cavender seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Forste-Grupp moved to approve a contract in the amount of \$836,595.55 with COF Company for the installation of library shelving which was scheduled to remain under Co-Stars Contract No. 035-E23-197. Commissioner Cavender seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Forste-Grupp moved to approve a change order in the amount of \$45,000 with Bernardin LLC. for additional construction administrative services. Commissioner Cavender seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Public Works Contracts

Commissioner Cavender moved to approve a contract totaling \$23,484.37 with National Glazing Solutions, LLC. For the purchase and installation of security and solar tinting in the Haverford Township Administrative building under Co-Stars Contract 020-E23-238 Commissioner Forste-Grupp seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Police Contracts

Commissioner Gondek moved to approve a contract totaling \$41,815.15 for the outfitting and installation of emergency lighting for 2 Chevrolet EV Blazers to Havis, Inc. under Co-Stars Contract 012-E24-365. Commissioner Quinn seconded the motion. Commissioner Hart asked Chief Viola if the Blazers are electric vehicles, which the Chief confirmed were. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Emergency Medical Services Contracts

Commissioner Cavender moved to approve a contract totaling \$142,250 to re-mount and refurbish one Emergency Medical Services chassis to P-Fund Superior Sales under specialized services exemption. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender,

Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to approve a contract totaling \$54,978.06 for the trade-in and disposal of the current system and purchase of two Striker power load systems to Striker Medical under a specialized services exemption. Commissioner Cavender seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Parks and Recreation Contracts

Commissioner Hart moved to award a contract in the amount of \$237,000 for the Brookline Park Storm Water Facilities Project to Frania Inc. Commissioner Quinn seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Economic Development Contracts

Commissioner Trombetta moved to enter into a formalized professional services agreement with the Discover Haverford for the provision of economic development activities within the business districts of Haverford township from the periods of January 1, 2025 to December 31, 2025 and January 1, 2026 to December 31, 2026 for the fixed fee of \$110,000 and \$115,000, respectively. Commissioner Gondek seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner McCloskey moved to approve a change order in the amount of \$13,509.50 for the Darby Road Streetscape Phase 3 Project to Cooper Electric due to changes in PENNDOT's new specifications for light fixture on state highways. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Continuation of Citizen's Forum for Non-Agenda Items:

Michele Alvare asked about storm water management in basketball courts and supported Commissioner McCloskey's proposal for a 500 square feet requirement for storm water management plans because her neighbors put in patios and now her basement floods.

A resident asked if the sound study result data could be shared. Commissioner Holmes said it would be looked into.

A resident asked to hear more about the road safety plan.

A resident voiced concerns about dangerous delivery drivers and asked about either considering an ordinance or petitioning the state.

Sharon voiced serious concerns about road safety and accounted her experience of being seriously injured in an accident.

Tevin voiced concerns about wrong-way drivers at the mechanical plant at the intersection of West Chester Pike and Darby Road. He also voiced his frustration of the long meeting length.

Robert Dell voiced disappointment and anger toward Commissioner Holmes' post on social media after the presidential election.

Michael McNally reported issues of abandoned cars on East County Line Road that prevented residents from parking.

New Business: None.

Other Business:

Under other business, each of the Commissioners offered their comments as follows:

Commissioner Gondek echoed his earlier statement about the don email system. He also reminded that the last leaf pickup for his ward would take place the week of thanksgiving, so residents should have their leaves on the curb on November 25 by 6:00AM. He noted that a burn ban was currently in effect. He thanked everyone for the approval of the Skatium and wished everyone a happy Thanksgiving

Commissioner Forste-Grupp also reminded residents of the leaf pickup. She congratulated the library on the Dewey Decimal Run and Walk, announcing that 244 residents registered. She thanked Commissioner Hart and Commissioner Cavender for their attendance. She added that it is the responsibility of everyone to keep streets safe. She ended by wishing everyone a happy Thanksgiving.

Commissioner McCloskey congratulated Commissioner Hart for his attendance at the Dewey Decimal Run and Walk. He lamented being unable to attend. It was noted that Commissioner Trombetta and himself are hosting a town hall in the Haverford Township Board Room at 7:00PM. He also announced that the preliminary budget meeting would take place at the Haverford Township Board Room on November 18, and the second vote would be held at the same place on December 9.

Commissioner Cavender noted that the 5th ward's leaf pickup will be on December 9. She also noted that social media is not a valid form of civic engagement and urged

residents to get involved in local government as a proper use of energy.

Commissioner Quinn noted that some streets would be closed due to a 5K. She announced that Winter Fest will be on November 30 from 1:00PM to 6:00PM. She reminded that the 7th ward's leaf collection was this week. She thanked the Haverford Township staff and noted her appreciation for her time as a poll worker.

Commissioner Hart announced that Haverford Township Parks and Recreation received 2 grants totaling \$850,000 for Brookline Park and \$400,000 for the Darby Creek Trail. He thanked Senator Cappaletti for helping apply for the grants. He also announced that leaf collection for the 8th and 9th wards would take place on November 18. The Pennfield Civic center is hosting a happy hour at JD McGillicutty's on November 21. He finally wished everyone a happy Thanksgiving.

Commissioner McCollum echoed Commissioner Hart's leaf collection announcement and added that the second collection would take place from December 16 through 20. He noted that e-waste recycling would take place on November 23. He also noted the downed email system and wished everyone a happy Thanksgiving.

Commissioner Trombetta repeated Commissioner Hart's reminder of the Town Hall meeting. She announced a virtual meeting with the Environmental Protection Agency on November 19 at 6:00PM about the Havertown PCP superfund and groundwater testing. The link to the meeting would be shared with the public. She thanked the Haverford Township Police Department and Discover Haverford for offering 3 days of free parking on November 29, November 30, and December 21 to support small businesses for holiday shopping.

President Holmes reminded the public of the preliminary budget meeting. He then apologized to those he offended, the public, and his colleagues for the rhetoric posted to social media. He had not meant to offend anyone and took full responsibility for his actions. He said that the true meaning of his words is to have hope in America.

With no further business, the meeting adjourned.

Township of Haverford

Ordinance Number P8-2024

(Formatted for Accessibility)

An Ordinance of the Township of Haverford, Delaware County, amending Chapter 78, “Erosion and Sediment Control; Stormwater Management”, to provide for amended erosion and sediment control plan, permit, application, and inspection requirements; to ensure municipal separate storm sewer system compliance with the Pennsylvania department of environmental protection including a reduction of the threshold for a certain Stormwater reviews by the Township for projects involving new impervious surfaces of 500 square feet or more, increase the frequency of bmp inspections, and change the method of Stormwater calculations.

Whereas, the Home Rule Charter of the Township of Haverford (“Township”) and the Pennsylvania First Class Township Code authorize the Haverford Township Board of Commissioners (“Board”) to make and adopt ordinances consistent with the constitution and laws of this Commonwealth and with the Haverford Township Charter (“Charter”) when necessary for the proper management, care and control of the Township and the maintenance of peace, good government, health and welfare of the Township and its citizens; and

Whereas, the Haverford Township Code, Chapter 78, “Erosion and Sediment Control; Stormwater Management”, provides for erosion and sedimentation control and stormwater management requirements for projects and developments in the Township to, in part, better control stormwater runoff in the Township, minimize accelerated erosion and loss of natural infiltration, and to ensure compliance with all commonwealth and federal agencies; and

Whereas, the Board desires to ensure that Chapter 78 complies with all revised Municipal Separate Storm Sewer System requirements from the Pennsylvania Department of Environmental Protection; and

Whereas, the Board desires to amend the thresholds in Chapter 78 that require differing levels of review by the Township for projects involving grading, excavation, and/or the installation of new imperious surfaces; and

Whereas, to protect the health, safety, and welfare of the residents and visitors of Haverford Township, and to arrange for the orderly development, zoning, and use of properties within the Township, the Board of desires to amend Chapter 78 of its Code, in its entirety, to provide revisions pertaining to erosion and sedimentation control and stormwater management plan, permit, application, and inspection requirements;

Whereas, the Board has met the procedural requirements of the Charter for the adoption of the proposed ordinance, including advertising and multiple readings of the ordinance at public meetings; and

Now, therefore, be it Ordained and Enacted by the Haverford Township Board of Commissioners, Chapter 78 of Haverford Township Code of Ordinances shall be amended in its entirety and replaced pursuant to the articles and sections as set forth below:

Section I: Amendments to code. The Haverford Township Code of Ordinances, Chapter 78, "Erosion and Sediment Control; Stormwater Management", is hereby amended to provide as follows:

Chapter 78 Erosion and Sediment Control; Stormwater Management

Article I. Erosion and Sediment Control.

§ 78-1. Short title.

This chapter shall be known and may be cited as the "Township of Haverford Erosion and Sediment Control Ordinance."

§ 78-2. Purpose and Scope.

- A. The purpose of this chapter is to regulate the modification of the natural terrain, the alteration of drainage, the maintenance of artificial structures and surfaces and to provide for certain erosion and sediment control measures within the Township of Haverford so as to assure and safeguard health, safety, ecology and general welfare in the Township of Haverford.
- B. Scope of provisions. New grading, excavations and fills or changes, additions, repairs or alterations made to existing excavations and fills shall conform to the provisions of this chapter, except that this chapter shall not apply to work performed by the Township in a public street or on public property.

§ 78-3. Erosion and sediment control plans required; exceptions.

- A. A grading permit will not be required in the following situation, but in all other respects the provisions of this chapter shall apply:
- B. An excavation which does not exceed three feet in vertical depth at its deepest point measured from the natural ground surface nor cover an area of more than 200 square feet. This exception shall not affect the applicability of this chapter nor the requirement of a grading permit for any fill or grading made with the material from such excavation.

§ 78-4. Permit required.

- A. It shall be unlawful for any person, firm or corporation to pave, fill, strip, grade or regrade any land within the Township of Haverford without first securing a permit as hereunder provided, except as otherwise stated in 78-3.
- B. It shall be unlawful for any person, firm or corporation to disturb, modify, block, divert or affect the natural overland or subsurface flow of stormwater within the Township of Haverford without first securing a permit as hereunder provided.
- C. It shall be unlawful for any person, firm or corporation to construct, erect or install any drainage dam, ditch, culvert, drainpipe, bridge or any other structure or obstruction affecting the drainage of any premises in the Township of Haverford without first securing a permit as hereunder provided.

§ 78-5. Permit Application.

- A. Any person, firm or corporation proposing to engage in an activity requiring a permit hereunder shall apply for a permit by written application on a form furnished by the Township of Haverford.
- B. A separate application shall be required for each grading permit. Two hard copies and one digital copy of the proposed plan, including specifications and timing schedules, shall be submitted with each application for a permit.
- C. Applications for review required under this chapter shall be accompanied by a review fee as fixed by resolution of the Board of Commissioners, which may be amended from time to time.
- D. All applications for a permit involving an area of disturbance greater than 500 square feet shall be accompanied by a escrow deposit, to the benefit of the Township of Haverford in an amount as provided by Township resolution.

§ 78-6. Submission of property plan; information required.

The application for a permit shall be accompanied by a plan of the property showing:

A boundary line survey of the site on which the work is to be performed, showing the existing and proposed contours of the land and the proposed contours after completion of proposed grading.

- A. A description of the features, existing and proposed, surrounding the site which are of importance to the proposed development, including the nature of fill material and trees to be removed as a result of the proposed construction
- B. Description of the type and classification of the soil.
- C. Details and location of any proposed drainage structures and pipes.
- D. The lowest floor elevation of any proposed building based upon North American

Vertical Datum of 1988 and the elevation of the one-hundred-year flood.

- E. The location and description of existing and future manmade features of importance to the proposed development, i.e., cuts and fills, buildings, roads, etc.
- F. Plans and specifications of soil erosion and sediment control measures in accordance with standards and specifications of the Delaware County Conservation District or the Township of Haverford.
- G. A time schedule indicating the anticipated starting and completion dates of the development sequence and the time of exposure of each area prior to the completion of effective erosion and sediment control measures.
- H. All plans and specifications accompanying applications for permits shall include provisions for both interim (temporary) and ultimate (permanent) erosion and sediment control.
 - (1) The design, installation and maintenance of erosion and sediment control measures shall be accomplished in accordance with standards and specifications established by the Delaware County Conservation District as adapted from standards and specifications of the Soil Conservation Service, United States Department of Agriculture.
 - (2) Technical standards for the design and installation of erosion and sediment control measures are on file with the Township of Haverford office, the office of the Delaware, County Conservation District and other governmental agency offices.
 - (3) Standards and specifications adopted for the purposes of this chapter and by the Delaware County Conservation District include but are not limited to the following basic conservation measures:
 - (a) Temporary cover on critical areas.
 - (b) Permanent grass and cover on critical areas on prepared seedbed.
 - (c) Permanent grass and cover on critical areas on unprepared seedbed.
 - (d) Sodding.
 - (e) Mulching.
 - (f) Temporary diversion.
 - (g) Permanent diversion.
 - (h) Grassed waterway or outlet.
 - (i) Grade stabilization structure.
 - (j) Debris basin.

- (k) Drain.
- (l) Drainage, main or lateral.

§ 78-7. Submission of drainage study; contents; disposal of stormwater runoff; soils investigation report.

- A. Stormwater management plans shall be as required in this chapter.
 - (1) The application for a permit shall be accompanied by a plan of the property showing the location of all present and proposed ditches, streams, pipes and other drainage structures and proposed cuts and fills. In addition to showing present elevations and dimensions and location and extent of all proposed grading and/or drainage, the plan shall clearly indicate all buildings, parking areas and driveways. Further, the plan shall indicate the present and proposed sources, storage and disposition of water being channeled through or across the premises, together with elevations, gradients and maximum flow rates. The application shall describe the work to be performed, the materials to be used and the manner or method of performance, including provisions for protecting and maintaining existing drainage facilities whether on public or private property. The applicant shall supply data supporting the plan developed by a registered professional civil engineer or an engineer qualified in hydrology.
 - (2) Stormwater management plans shall be prepared in accordance with this chapter.
- B. The following provisions apply to the carrying and disposal of stormwater runoff:
 - (1) The applicant shall agree to the granting and recording of easements for drainage facilities, including acceptance of the discharge of water on the property of others, provisions for maintenance of slopes and swales and access for the maintenance of anti-erosion facilities.
- C. If load-bearing fill is proposed, a soils investigation report shall be submitted, which shall consist of test borings, laboratory testings and engineering analysis to correlate surface and subsurface conditions with the proposed grading plan. The results of the investigation shall be presented in a report by a registered professional soils engineer or geologist, which shall include data regarding the nature, distribution and supporting ability of existing soils and rocks on the site, conclusions and recommendations to ensure stable soil conditions and groundwater control, as applicable. The Township of Haverford may require such supplemental reports and data as it deems necessary. Recommendations included in such reports and approved by the Township of Haverford shall be incorporated in the plan or specifications.
 - (1) Fills toeing out on natural slopes steeper than four horizontal to one vertical shall not be made unless approved by the Township of Haverford after receipt of a report, deemed acceptable by the Township of Haverford Engineer, by a

registered professional soils engineer certifying that he has investigated the property, made soil tests and that, in his opinion, such steeper slopes will safely support the proposed fill.

- (2) Natural and/or existing slopes exceeding five horizontal to one vertical shall be benched or continuously stepped into competent materials prior to placing all classes of fill.

§ 78-8. Issuance of permit.

Upon the submission of an application which conforms to the provisions of this chapter, the Director of Code Enforcement or their designee, after consultation with the Township of Haverford Engineer, shall issue the necessary permit.

§ 78-9. Performance standards.

- A. Notwithstanding any provision of this chapter or any condition of the permit, the permittee is responsible for the prevention of damage to other property or personal injury which may be affected by the activity requiring a permit.
- B. No person, firm or corporation shall modify, fill, excavate, pave, grade or regrade land in any manner so close to a property line as to endanger or damage any adjoining street, sidewalk, alley or any other public or private property without supporting and protecting such property from settling, cracking, erosion, sediment or other physical damage or personal injury which might result.
- C. No person, firm or corporation shall deposit or place any debris or any other material whatsoever or to cause such to be thrown or placed in any drainage ditch or drainage structure in such a manner as to obstruct free flow.
- D. No person, firm or corporation shall fail to adequately maintain in good operating order any drainage facility on his premises. All drainage ditches, culverts, drainpipes and drainage structures shall be kept open and free-flowing at all times.
- E. The owner of any property on which any work has been done pursuant to a permit granted under this chapter shall continuously maintain and repair all graded surfaces and antierosion devices, retaining walls, drainage structures or means and other protective devices, plantings and ground cover installed or completed.
- F. All graded surfaces shall be seeded, sodded and/or planted or otherwise protected from erosion within 60 days and shall be watered, tended and/or maintained until growth, in the case of vegetation, is well established. The disturbed area and duration of exposure shall be kept to a practical minimum.
- G. All trees in the area of extreme grade change shall be removed unless protected with suitable tree wells. However, extreme precautions shall be taken to prevent the unnecessary removal of trees.
- H. When required, adequate provisions shall be made for dust control measures as are

deemed acceptable by the Township of Haverford.

- I. A quality control program is critical for fills, therefore, whenever fill material is to be used, each layer of compacted fill should be tested to determine its dry density as per ASTM D 1556. The density of each layer should not be less than 95% of maximum dry density as determined by ASTM D 1557.
 - (1) Inspection procedure shall follow the general procedure as stated in § 78-10.
 - (2) Compaction test reports shall be kept on file at the site and shall be subject to review at all times.
 - (3) The degree of compaction required shall be determined by the Township of Haverford Engineer following the guidelines in Subsection J above.
 - (4) Where the provisions of Subsection J are determined to be inapplicable, they may be waived by the Township of Haverford Engineer.

§ 78-10. Inspections; availability and inspection of as-built plans; issuance of occupancy permit.

- A. The Township Engineer shall, when requested by the Director of Code Enforcement or their designee, make inspections hereinafter required and shall either approve that portion of the work which has been completed or notify the permit holder wherein the same fails to comply with the provisions of this chapter. Where it is found by inspection that the conditions are not as stated or shown in the application, the Township Engineer may refuse to approve further work until approval is obtained for a revised grading plan.
- B. Plans for the grading work shall be approved by the Township Engineer and shall be maintained at the site during the progress of the grading work and until the work has been approved.
- C. The permit holder shall notify the Township Engineer in order to obtain inspections, in accordance with the following schedule, at least 48 hours before the inspection is to be made:
 - (1) Initial inspection. When work on the excavation or fill is about to be commenced.
 - (2) Rough grading. When all rough grading has been completed.
 - (3) Drainage facilities. When drainage facilities are to be installed and before such facilities are backfilled.
 - (4) Special structures. When excavations are complete for retaining and crib walls, and when reinforcing steel is in place and before concrete is poured.
 - (5) Final inspection. When all work, including the installation of all drainage and other structures, has been completed.

- D. If at any of the work the Township Engineer shall determine by inspection that the nature of the grading is not in accordance with the approved permit or is not functioning as designed and/or is likely to endanger property or streets or alleys or create hazardous conditions, the Township Engineer may require, as a condition to allowing the work to be done, that such reasonable safety precautions be taken as the Township Engineer considers advisable to avoid such likelihood of danger. Safety precautions may include but shall not be limited specifying a flatter exposed slope, construction or additional drainage facilities, berms, terracing, compaction or cribbing.
- E. Any and all as-built plans shall be available on the site at all times and be subject to inspection and inquiry.
- F. Satisfactory compliance with this chapter shall be necessary before issuance of an occupancy permit.

§ 78-11. Payment of inspection costs by applicant; deposit of sum to cover costs required.

All applicants shall bear all cost of inspections required hereunder and shall deposit with the Director of Finance such sum as the Director of Code Enforcement shall determine to be necessary to guarantee payment of the cost of such inspections.

§ 78-12. Violations and penalties.

Any person, firm or corporation violating any provision of this article shall, upon summary conviction before any District Justice of the Peace, pay a fine not exceeding \$1,000 and costs of prosecution; and in default of one payment of the fine and costs, the violator may be sentenced to the county jail for a term of not more than 90 days. Each and every day in which any person, firm or corporation shall be in violation of this article shall constitute a separate offense.

Article II Stormwater Management General Provisions

§ 78-13. Short Title.

This Ordinance shall be known and may be cited as the “Township of Haverford Stormwater Management Ordinance.”

§ 78-14. Statement of Findings.

The Board of Commissioners of Haverford Township finds that:

- A. Inadequate management of accelerated runoff of stormwater resulting from development throughout a watershed increases runoff volumes, flows and velocities, contributes to erosion and sedimentation, overtaxes the carrying capacity of streams

and storm sewers, greatly increases the cost of public facilities to carry and control stormwater, undermines flood plain management and flood control efforts in upstream and downstream communities, infiltration, threatens public health and safety, and increases nonpoint source pollution of water resources.

- B. Inadequate planning and management of stormwater runoff resulting from land development throughout a watershed can also harm surface water resources by changing the natural hydrologic patterns, accelerating stream flows (which increase scour and erosion of streambeds and streambanks, thereby elevating sedimentation), destroying aquatic habitat, and elevating aquatic pollutant concentrations and loadings such as sediments, nutrients, heavy metals, and pathogens. Groundwater resources are also impacted through loss of recharge.
- C. A comprehensive program of stormwater management (SWM), including minimization of impacts of development, redevelopment, and activities causing accelerated runoff, is fundamental to the public health, safety, and welfare and the protection of people of the Commonwealth, their resources, and the environment.
- D. Stormwater is an important water resource by providing infiltration for water supplies and supports the base flow of streams, which also protects and maintains surface water quality.
- E. Impacts from stormwater runoff can be minimized by using project designs that maintain the natural hydrologic regime and sustain high water quality, infiltration, stream baseflow, and aquatic ecosystems. The most cost-effective and environmentally advantageous way to manage stormwater runoff is through nonstructural project design that minimizes impervious surfaces and sprawl, avoids sensitive areas (i.e., stream buffers, floodplains, steep slopes), and considers topography and soils to maintain the natural hydrologic regime.
- F. Public education on the control of pollution from stormwater is an essential component in successfully addressing stormwater.
- G. Federal and state regulations require certain municipalities to implement a program of stormwater controls. These municipalities are required to obtain a permit for stormwater discharges from their separate storm sewer systems under the National Pollutant Discharge Elimination System (NPDES) program.
- H. Nonstormwater discharges to municipal separate storm sewer systems can contribute to pollution of waters of the commonwealth by Haverford Township.
- I. The use of green infrastructure and low impact development (LID) are intended to address the root cause of water quality impairment by using systems and practices which use or mimic natural processes to: 1) infiltrate and recharge, 2) evapotranspire, and/or 3) harvest and use precipitation near where it falls to earth. Green infrastructure practices, LID, and Cluster Development (CD) contribute to the restoration or maintenance of pre-development hydrology.

§ 78-15. Purpose.

The purpose of this ordinance is to promote the public health, safety, and general welfare, property, and water quality by implementing drainage and stormwater management practices, criteria, and provisions included herein for land development, construction, and Earth Disturbance Activities, to achieve the following throughout the Township:

- A. Promote alternative project designs and layouts that minimize the impacts on surface and groundwater.
- B. Promote nonstructural best management practices (BMPs).
- C. Minimize increases in runoff stormwater volume.
- D. Minimize impervious surfaces.
- E. Manage accelerated stormwater runoff and erosion and sedimentation problems and stormwater runoff impacts at their source by regulating activities that cause these problems.
- F. Provide review procedures and performance standards for stormwater planning and management.
- G. Utilize and preserve existing natural drainage systems as much as possible.
- H. Manage stormwater impacts close to the runoff source, requiring a minimum of structures and relying on natural processes.
- I. Focus on infiltration of stormwater to maintain base flow, to prevent degradation of surface and groundwater quality, and to otherwise protect water resources.
- J. Protect base flows and quality of streams and watercourses, where possible.
- K. Meet legal water quality requirements under state law, including regulations at 25 Pennsylvania Code Chapter 93 to protect, maintain, reclaim, and restore the existing and designated uses of the Waters of the Commonwealth.
- L. Address the quality and quantity of stormwater discharges from the development site.
- M. Provide standards to meet certain NPDES MS4 permit requirements.
- N. Implement an illicit discharge detection and elimination program that addresses non-stormwater discharges into the Municipality's separate storm sewer system (MS4).
- O. Preserve the flood-carrying capacity of streams.
- P. Protect water quality by removing and/or treating pollutants prior to discharge to ground- and surface waters throughout Haverford Township, and to protect, restore, and maintain the chemical, physical, and biological quality of ground and surface waters.

- Q. Reduce flooding impacts and prevent a significant increase in surface runoff rates and volumes, pre-development to post-development, which could worsen flooding downstream in the watershed, enlarge floodplains, erode stream banks, and create other flood-related health, welfare or property losses; in general, to preserve and restore the natural flood-carrying capacity of streams and their floodplains.
- R. Prevent accelerated scour, erosion and sedimentation of stream channels.
- S. Provide performance standards and design criteria based on watershed-wide stormwater management planning.
- T. Provide proper operation and maintenance of all permanent stormwater management facilities and BMPs that are implemented within the Township.
- U. Implement the requirements of Total Maximum Daily Loads (TMDLs) where applicable to waters within or impacted by the Township.

§ 78-16. Statutory Authority.

The Township is empowered or required to regulate land use activities that affect runoff and surface and groundwater quality and quantity by the authority of:

- A. Act of October 4, 1978, 32 P.S., P.L. 864 (Act 167) § 680.1 et seq., as amended, the "Stormwater Management Act" (hereinafter referred to as "the Act");
- B. Water Resources Management Act of 2002, as amended;
- C. First Class Township Code, 53, Section 55101 et seq;
- D. Act of July 31, 1968, P.L. 805, No. 247, Pennsylvania Municipalities Planning Code, Act 247, as amended.

§ 78-17. Applicability/regulated activities.

All regulated activities and all activities that may affect stormwater runoff, including but not limited to land development, redevelopment, and earth disturbance activity located within the municipality, are subject to regulation by this Ordinance.

- A. This article shall apply to all areas of Haverford Township.
- B. This article shall only apply to permanent structural and nonstructural stormwater management BMPs constructed as part of any of the regulated activities listed in this section.
- C. This article contains only the stormwater management performance standards and design criteria that are necessary or desirable from a watershed-wide perspective. Local stormwater management design criteria (e.g., inlet spacing, inlet type, collection system design and details, outlet structure design, etc.) shall continue to be regulated by the applicable municipal ordinances and applicable state regulations.

D. The following activities are defined as "regulated activities" and shall be regulated by this article unless exempted by § 78-18:

1. Land development.
2. Subdivisions.
3. Alteration of the natural hydrologic regime.
4. Construction or reconstruction of or addition of new impervious surfaces (i.e., driveways, parking lots, roads, etc.).
5. Construction of new buildings or additions to existing buildings.
6. Redevelopment.
7. Diversion piping or encroachments in any natural or man-made channel.
8. Nonstructural and structural stormwater management BMPs or appurtenances thereto.
9. Earth disturbance activities of greater than 5,000 square feet.
10. Earth disturbances within 50 feet of other sensitive environmental features, such as streams, ponds, lakes and wetlands.
11. Any of the above regulated activities which were approved more than five years prior to the effective date of this article and resubmitted for municipal approval.

Table 105.1 summarizes the applicability requirements of the ordinance. "Regulated impervious surface" in Table 105.1 includes new, additional, or replacement impervious surface/cover. Repaving existing surfaces without reconstruction does not constitute "replacement."

§ 78-18. Exemptions.

Exemptions for land use activities. An exemption shall not relieve the Applicant from implementing the requirements of the municipal Ordinance or from implementing such measures as are necessary to protect public health, safety, and property. An exemption shall not relieve the Applicant from complying with the special requirements for watersheds draining to identified high quality (HQ) or exceptional value (EV) waters or any other current or future state or municipal water quality protection requirements. If a drainage problem is documented or known to exist downstream of, or is expected from the proposed activity, then the Municipality may withdraw exemptions listed in Table 105.1 and require the Applicant to comply with all requirements of this Ordinance. Even though the Applicant is exempt, he is not relieved from complying with other municipal ordinances or regulations.

Table 105.1 summarizes the exemptions from certain provisions of this Ordinance. Exemptions are for the items noted in Table 105.1 only, and shall not relieve the Applicant from other applicable sections of this Ordinance.

Any regulated activity that is exempt from some provisions of the Ordinance is exempt only from those provisions. If development is to take place in phases, the developer is responsible for implementing the requirements of the Ordinance as the impervious surface/earth disturbance threshold is met. The date of the municipal Ordinance adoption shall be the starting point from which to consider tracts as “parent tracts” in which future subdivisions and respective impervious area and earth disturbance computations shall be cumulatively considered. Exemption shall not relieve the applicant from implementing such measures as are necessary to protect health, safety, and property. For example:

If a property owner proposed a 150 square foot shed after adoption of the municipal stormwater management ordinance, that property owner be exempted from the water quality and quantity requirements of the ordinance as noted in Table 105.1 of the ordinance. If, at a later date, the property owner proposes to construct a 499 square foot room addition, the applicant would be required to comply with the requirements for the Simplified Method for the full 649 square feet of impervious surface created since adoption of the municipal ordinance. If an additional 700 square foot swimming pool/patio is proposed later, the property owner would be required implement the full stormwater quantity and quality control submission requirements of this ordinance for the total 1,349 square feet of additional impervious surface added to the original property since adoption of the municipal ordinance.

A. Exemptions for land use activities. The following land use activities are exempt from the SWM site plan submission requirements of this article:

(1) Use of land for gardening for home consumption.

(2) Agriculture when operated in accordance with a conservation plan, nutrient management plan, or erosion and sedimentation control plan approved by the County Conservation District, including activities such as growing crops, rotating crops, tilling of soil, and grazing animals. Installation of new or expansion of existing farmsteads, animal housing, waste storage, and production areas having impervious surfaces that result in a net increase in earth disturbance of greater than 5,000 square feet shall be subject to the provisions of this article.

(3) High Tunnel if:

a. The High Tunnel or its flooring does not result in an impervious surface exceeding 25% of all structures located on the Landowner’s total contiguous land area; and

b. The High Tunnel meets one of the following:

i. The High Tunnel is located at least 100 feet from any perennial stream or watercourse, public road, or neighboring property line.

- ii. The High Tunnel is located at least 35 feet from any perennial stream or watercourse, public road or neighboring property line and located on land with a slope not greater than 7%.
- iii. The High Tunnel is supported with a buffer or diversion system that does not directly drain into a stream or other watercourse by managing stormwater runoff in a manner consistent with the requirements of Pennsylvania Act 167.

(4) Forest management operations which are following the Department of Environmental Protection's (DEP) management practices contained in its publication "Soil Erosion and Sedimentation Control Guidelines for Forestry" and are operating under an approved erosion and sedimentation plan and must comply with the stream buffer requirements in § 78-42.

(5) Road replacement, development, or redevelopment that has less than 500 square feet of new, additional, or replaced impervious surface/cover, or in the case of earth disturbance only, less than 5,000 square feet of disturbance, is exempt from this article.

(6) Repaving without reconstruction.

B. Exemptions for land development activities.

(1) The following land development and earth disturbance activities are exempt from the SWM site plan submission requirements of this article.

(a) A maximum of 499 square feet of new, additional, or replacement proposed impervious surface.

(b) Up to a maximum of 5,000 square feet of disturbed earth.

(2) These criteria shall apply to the total development even if the development is to take place in phases. The date of the municipal ordinance adoption shall be the starting point from which to consider tracts as "parent tracts" upon which future subdivisions and respective earth disturbance computations shall be cumulatively considered.

The activities exempted above are still encouraged to implement the stormwater management practices as indicated in Appendix B.

(3) The developer should first determine if the proposed activity will result in the introduction of 500 square feet or more of new, additional, or replacement impervious surface. If not, the developer should next determine if the proposed activity will involve earth disturbance of over 5,000 square feet. If not, then the project is exempt from the SWM site plan requirements. Examples:

(a) A project introducing 500 square feet of impervious surface, but only 4,900 square feet of earth disturbance is regulated by this article.

(b) A project involving 5,100 square feet of earth disturbance, but resulting in 400

square feet of impervious surface is regulated.

(c) A project introducing 400 square feet of impervious surface and involving 4,900 square feet of earth disturbance is exempt from the SWM site plan requirements of this article.

C. Additional exemption criteria:

(1) Exemption responsibilities. An exemption shall not relieve the applicant from implementing such measures as are necessary to protect public health, safety, and property.

(2) HQ and EV streams. An exemption shall not relieve the applicant from meeting the special requirements for watersheds draining to identified high quality (HQ) or exceptional value (EV) waters and source water protection areas (SWPA) and requirements for nonstructural project design sequencing (§ 78-33).

(3) Drainage problems. If a drainage problem is documented or known to exist downstream of or is expected from the proposed activity, then Haverford Township may require the applicant to comply with this article.

(4) Emergency exemption. Emergency maintenance work performed for the protection of public health, safety, and welfare. A written description of the scope and extent of any emergency work performed shall be submitted to the Township of Haverford within two calendar days of the commencement of the activity. If the Township of Haverford finds that the work is not an emergency, then the work shall cease immediately, and the requirements of this article shall be addressed as applicable.

(5) Maintenance exemption. Any maintenance to an existing stormwater management system made in accordance with plans and specifications approved by the Township Engineer or the Township of Haverford.

(6) Even though the developer is exempt, they are not relieved from complying with other regulations.

§78-19. Repealer.

Any other ordinance provision(s) or regulation of the municipality inconsistent with any of the provisions of this Ordinance is hereby repealed to the extent of the inconsistency only.

§ 78-20. Severability.

In the event that a court of competent jurisdiction declares any section or provision of this ordinance invalid, such decision shall not affect the validity of any of the remaining provisions of this Ordinance.

§ 78-21. Compatibility with other ordinances or legal requirements.

- A. Approvals issued and actions taken under this Ordinance do not relieve the applicant of the responsibility to secure required permits or approvals for activities regulated by any other code, law, regulation or ordinance.
- B. To the extent that this article imposes more rigorous or stringent requirements for stormwater management, the specific requirements contained in this article shall be followed.
- C. Nothing in this article shall be construed to affect any of Haverford Township's requirements regarding stormwater matters that do not conflict with the provisions of this article, such as local stormwater management design criteria (e.g., inlet spacing, inlet type, collection system design and details, outlet structure design, etc.). Conflicting provisions in other municipal ordinances or regulations shall be construed to retain the requirements of this article addressing state water quality requirements. The requirements of this Ordinance shall supersede any conflicting requirements in other municipal ordinances or regulations.

§ 78-22. Erroneous Permit.

Any permit or authorization issued or approved based on false, misleading or erroneous information provided by an applicant is void without the necessity of any proceedings for revocation. Any work undertaken or use established pursuant to such permit or other authorization is unlawful. No action may be taken by a board, agency or employee of the Township purporting to validate such a violation.

§ 78-23. Waivers.

- A. If the Township determines that any requirement under this Ordinance cannot be achieved for a particular regulated activity, the Township may, after an evaluation of alternatives, approve measures other than those in this Ordinance, subject to Section § 78-22, Waivers; paragraphs B and C.
- B. Waivers or modifications of the requirements of this Ordinance may be approved by the Township if enforcement will exact undue hardship because of peculiar conditions pertaining to the land in question, provided that the modifications will not be contrary to the public interest and that the purpose of the Ordinance is preserved. Cost or financial burden shall not be considered a hardship. Modification may be considered if an alternative standard or approach will provide equal or better achievement of the purpose of the Ordinance. A request for modifications shall be in writing and accompany the Stormwater Management Site Plan submission. The request shall provide the facts on which the request is based, the provision(s) of the Ordinance involved and the proposed modification.
- C. No waiver or modification of any regulated stormwater activity involving earth disturbance greater than or equal to one acre may be granted by the Township unless that action is approved in advance by the Department of Environmental Protection (DEP) or the Delaware County Conservation District.

§ 78-24. Word Usage.

For the purposes of this article, certain terms and words used herein shall be interpreted as follows:

- A. Words used in the present tense include the future tense; the singular number includes the plural, and the plural number includes the singular; words of masculine gender include feminine gender or nonbinary; and words of feminine gender include masculine gender or nonbinary.
- B. The word "includes" or "including" shall not limit the term to the specific example but is intended to extend its meaning to all other instances of like kind and character.
- C. The word "person" includes an individual, firm, association, organization, partnership, trust, company, corporation, unit of government, or any other similar entity.
- D. The words "shall" and "must" are mandatory; the words "may" and "should" are permissive.
- E. The words "used" or "occupied" include the words "intended, designed, maintained, or arranged to be used, occupied, or maintained."

As used in this article, the following terms shall have the meanings indicated:

ACCELERATED EROSION

The removal of the surface of the land through the combined action of man's activity and the natural processes at a rate greater than would occur because of the natural process alone.

AGRICULTURAL ACTIVITY

Activities associated with agriculture such as agricultural cultivation, agricultural operation, and animal heavy use areas. This includes the work of producing crops including tillage, land clearing, plowing, disking, harrowing, planting, harvesting crops or pasturing and raising of livestock and installation of conservation measures. Construction of new buildings or impervious area is not considered an agricultural activity.

ALTERATION

As applied to land, a change in topography as a result of the moving of soil and rock from one location or position to another; also the changing of surface conditions by causing the surface to be more or less impervious; land disturbance.

APPLICANT

A landowner, developer, or other person who has filed an application to the municipality for approval to engage in any regulated activity at a project site in the municipality.

As-Built Drawings

Engineering or site drawings maintained by the contractor as they construct the project and upon which they document the actual locations of the building components and changes to the original contract documents. These documents, or a copy of same, are turned over to the municipal Engineer at the completion of the project.

Bankfull

The channel at the top-of-bank or point from where water begins to overflow onto a floodplain.

Baseflow

Portion of stream discharge derived from groundwater; the sustained discharge that does not result from direct runoff or from water diversions, reservoir releases, piped discharges, or other human activities.

Best Management Practices

Activities, facilities, designs, measures, or procedures used to manage stormwater impacts from regulated activities, to meet state water quality requirements, to promote infiltration, and to otherwise meet the purposes of this Ordinance. Stormwater BMPs are commonly grouped into one of two broad categories or measures: “structural” or “nonstructural.” In this Ordinance, nonstructural BMPs or measures include certain low impact development practices used to minimize the contact of pollutants with stormwater runoff. These practices aim to limit the total volume of stormwater runoff and manage stormwater at its source by techniques such as protecting natural systems and incorporating existing landscape features. Nonstructural BMPs include, but are not limited to, low impact development practices such as the protection of sensitive and special value features such as wetlands and riparian areas, the preservation of open space while clustering and concentrating development, the reduction of impervious surface, and the disconnection of rooftops from storm sewers. Structural BMPs are those that consist of a physical to capture and treat stormwater runoff. Structural BMPs include, but are not limited to, a wide variety of practices and devices, from large-scale retention ponds and constructed wetlands to small-scale underground treatment systems, infiltration facilities, filter strips, bioretention, wet ponds, permeable paving, grassed swales, riparian buffers, sand filters, detention basins, and manufactured devices. Structural and nonstructural stormwater BMPs are permanent appurtenances to the project site.

Bioretention

A stormwater retention area that utilizes woody and herbaceous plants and soils to remove pollutants before infiltration occurs.

Buffer

See “Riparian Buffer”.

Channel

An open drainage feature through which stormwater flows. Channels include, but shall not be limited to, natural and man-made drainageways, swales, streams, ditches, canals, and pipes flowing partly full.

Channel Erosion

The widening, deepening, or headward cutting of channels and waterways caused by stormwater runoff or bankfull flows.

Cistern

An underground reservoir or tank for storing rainwater.

Conservation District

The Delaware County Conservation District.

Conveyance

A natural or manmade, existing, or proposed Stormwater Management Facility, feature or channel used for the transportation or transmission of stormwater from one place to another. For the purposes of this Ordinance, Conveyance shall include pipes, drainage ditches, channels, and swales (vegetated and other), gutters, stream channels, and like facilities or features.

Culvert

A structure with its appurtenant works which carries water under or through an embankment or fill.

Dam

A man-made barrier, together with its appurtenant works, constructed for the purpose of impounding or storing water or another fluid or semifluid. A dam may include a refuse bank, fill, or structure for highway, railroad, or other purposes which impounds or may impound water or another fluid or semifluid.

Department

The Pennsylvania Department of Environmental Protection. Also referred to as “DEP”, “PA DEP” or “PADEP”.

DESIGNEE

The agent of the Delaware County Planning Department, Delaware County Conservation District, and/or agent of the governing body involved with the administration, review, or

enforcement of any provisions of this article by contract or memorandum of understanding.

Design Professional (Qualified)

A Pennsylvania-registered professional engineer, registered landscape architect, or registered professional land surveyor trained to develop stormwater management plans, or any person licensed by the Pennsylvania Department of State or qualified by law to perform the work required by the ordinance.

Design Storm

The magnitude and temporal distribution of precipitation from a storm event measured in probability of occurrence (e.g., a five-year storm) and duration (e.g., 24 hours), used in the design and evaluation of stormwater management systems. Also see Return Period.

Detention Basin

An impoundment designed to collect and retard stormwater runoff by temporarily storing the runoff and releasing it at a predetermined rate. Detention basins are designed to drain completely soon after a rainfall event and become dry until the next rainfall event.

Detention Volume

The volume of runoff that is captured and released into the waters of the Commonwealth at a controlled rate.

Developer

A person, or company, or organization who seeks to undertake any regulated earth disturbance activities at a project site in Haverford Township.

Development, Land

Any human-induced change to improved or unimproved real estate, whether public or private, including but not limited to land development, construction, installation, or expansion of a building or other structure, land division, street construction, drilling, and site alteration, such as embankments, dredging, grubbing, grading, paving, parking or storage facilities, excavation, filling, stockpiling, or clearing. As used in this article, development encompasses both new development and redevelopment.

Development Site (Site)

See Project Site.

Diameter At Breast Height (Dbh)

The outside bark diameter at breast height which is defined as 4.5 feet (1.37m) above the forest floor on the uphill side of the tree.

Diffused Drainage Discharge

Drainage discharge that is not confined to a single point location or channel, including sheet flow or shallow concentrated flow.

Discharge

- A. (verb) To release water from a project, site, aquifer, drainage basin, or other point of interest;
- B. (noun) The rate and volume of flow of water such as in a stream, generally expressed in cubic feet per second (see "peak discharge").

Discharge Point

The point of discharge for a stormwater facility.

Disturbed Areas

An unstabilized land area where an earth disturbance activity is occurring or has occurred.

Ditch

A man-made waterway constructed for irrigation or stormwater conveyance purposes.

Downslope Property Line

That portion of the property line of the lot, tract, or parcels of land being developed, located such that overland or pipe flow from the project site would be directed towards it by gravity.

Drainage Conveyance Facility

A stormwater management facility designed to transport stormwater runoff that includes channels, swales, pipes, conduits, culverts, and storm sewers.

Drainage Easement

A right granted by a landowner to a grantee allowing the use of private land for stormwater management purposes.

Earth Disturbance Activity

A construction or other human activity which disturbs the surface of the land, including, but not limited to: clearing and grubbing; grading; excavations; embankments; road maintenance; building construction; and the moving, depositing, stockpiling, or storing of soil, rock, or earth materials.

Emergency Spillway

A conveyance area that is used to pass peak discharge greater than the maximum design storm controlled by the stormwater facility.

ENCROACHMENT

A structure or activity that changes, expands or diminishes the course, current, or cross-section of a watercourse, floodway or body of water.

Erosion

The natural process by which the surface of the land is worn away by water, wind or chemical action.

Erosion And Sediment (E&S) Control Plan

A plan that is designed to minimize accelerated erosion and sedimentation. Said plan must be submitted to and approved by the appropriate conservation district before construction can begin.

Evapotranspiration (Et)

The combined processes of evaporation from the water or soil surface and transpiration of water by plants.

Exceptional Value Waters

Surface waters of high quality which satisfy Pennsylvania Code Title 25 Environmental Protection, Chapter 93, Water Quality Standards, § 93.4b(b) (relating to anti-degradation).

Existing Conditions

The dominant land cover during the 5-year period immediately preceding a proposed regulated activity.

FEMA

Federal Emergency Management Agency.

Financial Hardship

A situation where the greatest possible profit cannot be fully realized from development/redevelopment on a given parcel of land due to added costs or burdens associated with the design, construction, and/or maintenance of stormwater structures, facilities, buffers and/or setbacks.

Flood

A temporary condition of partial or complete inundation of land areas from the overflow of streams, rivers, and other waters of this commonwealth.

Floodplain

Any land area susceptible to inundation by water from any natural source or delineated by applicable Department of Housing and Urban Development, Federal Emergency Management Agency (FEMA) maps and studies as being a special flood hazard area.

Floodway

The channel of the watercourse and those portions of the adjoining floodplains that are reasonably required to carry and discharge the 100-year flood (also called the base flood or one percent (1%) annual chance flood). Unless otherwise specified, the boundary of the floodway is as indicated on maps and flood insurance studies provided by FEMA. In an area where no FEMA maps or studies have defined the boundary of the 100-year floodway, it is assumed--absent evidence to the contrary--that the floodway extends from the stream to 50 feet from the top of the bank of the stream.

Fluvial Geomorphology

The study of landforms associated with river channels and the processes that form them.

Forest Management/Timber Operations

Planning and activities necessary for the management of forestland. These include conducting a timber inventory, preparation of forest management plans, silvicultural treatment, cutting budgets, logging road design and construction, timber harvesting, site preparation, and reforestation.

Freeboard

A vertical distance between the elevation of the design high water and the top of a dam, levee, tank, basin, swale, or diversion berm. The space is required as a safety margin in a pond or basin.

Grade

A. (noun) A slope, usually of a road, channel or natural ground specified in percent and shown on plans as specified herein.

B. (verb) To finish the surface of a roadbed, the top of an embankment, or the bottom of an excavation.

Grassed Waterway

A natural or man-made waterway, usually broad and shallow, covered with erosion-resistant grasses used to convey surface water.

Green Infrastructure

Systems and practices that use or mimic natural processes to infiltrate, evapotranspire, or reuse stormwater on the site where it is generated. Also referred to as Green Stormwater Infrastructure (GSI).

Groundwater

Water beneath the earth's surface that supplies wells and springs and is often between saturated soil and rock.

Groundwater Recharge

The replenishment of existing natural underground water supplies from rain or overland flow.

HEC-HMS

The U.S. Army Corps Of Engineers, Hydrologic Engineering Center (HEC) – Hydrologic Modeling System (HMS). This model was used to model the Darby-Cobbs and Crum Creek watersheds during the Act 167 plan development and was the basis for the standards and criteria of this article.

High Quality Waters

Surface waters having quality which exceeds levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water by satisfying Pennsylvania Code Title 25 Environmental Protection, Chapter 93, Water Quality Standards, § 93.4b(a).

High Tunnel

A structure which meets the following:

1. Is used for the production, processing, keeping, storing, sale or shelter of an agricultural commodity as defined in section 2 of the Act of December 19, 1974 (P.L. 973, No. 319), known as the “Pennsylvania Farmland and Forest Land Assessment Act of 1974,” or the storage of agricultural equipment or supplies; and
2. Is constructed with all the following:
 - a. has a metal, wood, or plastic frame;
 - b. when covered, has a plastic, woven textile, or other flexible covering; and
 - c. has a floor made of soil, crushed stone, matting, pavers, or a floating concrete slab.

Hotspots

Areas where land use or activities generate highly contaminated runoff, with concentrations of pollutants in excess of those typically found in stormwater.

Hydrograph

A graph representing the discharge of water versus time for a selected point in the drainage system.

Hydrologic Regime

The hydrologic cycle or balance that sustains quality and quantity of stormwater, baseflow, storage and groundwater supplies under natural conditions.

Hydrologic Soil Group (HGS)

Infiltration rates of soils vary widely and are affected by subsurface permeability as well as surface intake rates. Soils are classified into four HSGs (A, B, C, and D) according to their minimum infiltration rate, which is obtained for bare soil after prolonged wetting. The NRCS defines the four groups and provides a list of most of the soils in the United States and their group classification. The soils in the area of the development site may be identified from a soil survey report that can be obtained from local NRCS offices or conservation district offices. Soils become less pervious as the HSG varies from A to D (NRCS1,2).

Impervious Surface (Impervious Area)

Impervious surfaces shall include, but are not limited to, streets, sidewalks, swimming pool surface, pavements, additional indoor living spaces, patios, garages, storage sheds, and similar structures, driveway areas, or roofs, tennis or other paved courts. For the purposes of determining compliance with this Ordinance, compacted soils or stone surfaces used for vehicle parking and movement shall be considered impervious. Uncompacted gravel areas with no vehicular traffic shall be considered pervious per review by the Township Engineer. Surfaces that were designed to allow infiltration (i.e. pavers and areas of porous pavement) are to be considered impervious surface, however, may be designed to function as a BMP per review by the Township Engineer. Additionally, for the purposes of determining compliance with this Ordinance, the total horizontal projection area of all ground-mounted and free-standing solar collectors, including solar photovoltaic cells, panels, and arrays, shall be considered pervious so long as the Township Engineer determines that the area underneath the solar photovoltaic cells, panels, and arrays is maintained as a vegetated pervious surface.

Impoundment

A retention or detention basin designed to retain stormwater runoff and release it at a controlled rate.

Infill

Development that occurs on smaller parcels that remain undeveloped but are within or in very close proximity to urban or densely developed areas. Infill development usually relies on existing infrastructure and does not require an extension of water, sewer, or other public utilities.

Infiltration

Movement of surface water into the soil, where it is absorbed by plant roots, evaporated into the atmosphere, or percolated downward to recharge groundwater.

Infiltration Structures

A structure designed to direct runoff into the underground water (e.g., French drains, seepage pits, or seepage trenches).

Inflow

The flow entering the stormwater management facility and/or BMP.

Inlet

The upstream end of any structure through which water may flow.

Intermittent Stream

A stream that flows only part of the time. Flow generally occurs for several weeks or months in response to seasonal precipitation or groundwater discharge.

Invert

The lowest surface, the floor or bottom of a culvert, drain, sewer, channel, basin, BMP, or orifice.

Karst

A type of topography or landscape characterized by surface depressions, sinkholes, rock pinnacles/uneven bedrock surface, underground drainage, and caves. Karst is formed on carbonate rocks, such as limestone or dolomite.

Land Development (Development)

Inclusive of any or all of the following meanings:

- i. The improvement of one lot or two or more contiguous lots, tracts, or parcels of land for any purpose involving:
 - a. A group of two or more buildings or
 - b. The division or allocation of land or space between or among two or more existing or prospective occupants by means of, or for the purpose of streets, common areas, leaseholds, condominiums, building groups, or other features;
- ii. Any subdivision of land;
- iii. Development in accordance with Section 503(1.1) of the PA Municipalities Planning Code

Limiting Zone

A soil horizon or condition in the soil profile or underlying strata that includes one of the following:

- A. A seasonal high water table, whether perched or regional, determined by direct observation of the water table or indicated by soil mottling.

- B. A rock with open joints, fracture or solution channels, or masses of loose rock fragments, including gravel, with insufficient fine soil to fill the voids between the fragments.
- C. A rock formation, other stratum, or soil condition that is so slowly permeable that it effectively limits downward passage of water.

Lot

A designated parcel, tract, or area of land established by a plat or otherwise as permitted by law and to be used, developed, or built upon as a unit.

Low Impact Development (LID)

Site design approaches and small-scale stormwater management practices that promote the use of natural systems for infiltration, evapotranspiration, and reuse of rainwater. LID can be applied to new development, urban retrofits, and revitalization projects. LID utilizes design techniques that infiltrate, filter, evaporate, and store runoff close to its source. Rather than rely on costly large-scale conveyance and treatment systems, LID addresses stormwater through a variety of small, cost-effective landscape features located on-site.

Main Stem (Main Channel)

Any stream segment or other runoff conveyance used as a reach in watershed-specific hydrologic models.

Managed Release Concept (MRC)

A post-construction stormwater management (PCSM) strategy that comprises the collection, management, and filtration of captured runoff from the contributing drainage area through a best management practice (BMP) that is preferably vegetated and includes release of a portion of the captured runoff through an underdrain within the BMP. If the MRC BMP is not vegetated, then pretreatment is required to meet water quality requirements. MRC is intended to be used for project areas or subareas where infiltration is considered infeasible to meet regulatory requirements. Refer to the "Managed Release Concept" Version 1.2 (August 25, 2020) guidance document or latest guidance from PA DEP.

Manning Equation (Manning Formula)

A method for calculation of velocity of flow (e.g., feet per second) and flow rate (e.g., cubic feet per second) in open channels based upon channel shape, roughness, depth of flow, and slope. "Open channels" may include closed conduits so long as the flow is not under pressure.

Maximum Design Storm

The maximum (largest) design storm that is controlled by the stormwater facility.

MUNICIPAL ENGINEER Or TOWNSHIP ENGINEER

A professional engineer licensed as such in the Commonwealth of Pennsylvania, duly appointed as the Engineer for a municipality, planning agency, or joint planning commission.

MUNICIPALITY Or TOWNSHIP

Haverford Township, Delaware County, Pennsylvania.

Natural Condition

Predevelopment condition.

Natural Hydrologic Regime

See "Hydrologic Regime."

Natural Recharge Area

Undisturbed surface area or depression where stormwater collects and a portion of which infiltrates and replenishes the underground and groundwater.

Nonpoint Source Pollution

Pollution that enters a water body from diffuse origins in the watershed and does not result from discernible, confined, or discrete conveyances.

Nonstormwater Discharges

Water flowing in stormwater collection facilities, such as pipes or swales, which is not the result of a rainfall event or snowmelt.

Nonstructural Best Management Practices (BMPs)

Methods of controlling stormwater runoff quantity and quality, such as innovative site planning, impervious area and grading reduction, protection of natural depression areas, temporary ponding on site, and other techniques.

NPDES

National Pollutant Discharge Elimination System, the federal government's system for issuance of permits under the Clean Water Act, which is delegated to DEP in Pennsylvania.

NRCS

Natural Resource Conservation Service (previously SCS).

Open Channel

A conveyance channel that is not enclosed.

Outfall

"Point source," as described in 40 CFR § 122.2, at the point where Haverford Township's storm sewer system discharges to surface waters of the commonwealth.

Outflow

The flow exiting the stormwater management facility and/or BMP.

Outlet

Points of water disposal to a stream, river, lake, tidewater, or artificial drain.

Parent Tract

The parcel of land from which a land development or subdivision originates, determined from the date of municipal adoption of this article.

Parking Lot Storage

Involves the use of parking areas as temporary impoundments with controlled release rates during rainstorms.

Peak Discharge

The maximum rate of stormwater runoff from a specific storm event.

Penn State Runoff Model

The computer-based hydrologic model developed at Pennsylvania State University.

Pennsylvania Stormwater Best Management Practices Manual

(Document Number 363-0300-002) (December 2006, and as subsequently amended) - The Best Management Practices Manual published by the Pennsylvania Department of Environmental Protection. The manual is to supplement federal and state regulations and the Department of Environmental Protection's Comprehensive Stormwater Management Policy that emphasizes effective site planning as the preferred method of managing runoff while also providing numerous examples of BMPs that can be employed in Pennsylvania to further avoid and minimize flooding and water resource problems.

Pervious Area

Any area not defined as impervious.

Pipe

A culvert, closed conduit, or similar structure (including appurtenances) that conveys stormwater.

Planning Commission

The Planning Commission of Haverford Township.

Point Source

Any discernible, confined, and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel or conduit from which stormwater is or may be discharged, as defined in state regulations at 25 Pennsylvania Code § 92.1.

Postconstruction

Period after construction during which disturbed areas are stabilized, stormwater controls are in place and functioning, and all proposed improvements in the approved land development plan are completed.

Preconstruction

Prior to commencing construction activities.

Predevelopment Condition

Undeveloped/natural condition.

Pretreatment

Techniques employed in stormwater BMPs to provide storage or filtering to trap coarse materials and other pollutants before they enter the system, but not necessarily designed to meet the water quality volume requirements of § 78-37.

Project Site

The specific area of land where any regulated activities in Haverford Township are planned, conducted or maintained.

Qualified Professional

Any person licensed by the Pennsylvania Department of State or otherwise qualified by law to perform the work required by this Ordinance.

Rational Formula

A rainfall-runoff relation used to estimate peak flow.

Reach

Any stream segment or other runoff conveyance used in the watershed-specific hydrologic models.

Recharge

The replenishment of groundwater through the infiltration of rainfall, other surface waters, or land application of water or treated wastewater.

Reconstruction

Demolition and subsequent rebuilding of impervious surface.

Record Drawings

Original documents revised to suit the as-built conditions and subsequently provided by the engineer to the client. The engineer reviews the contractor's as-builts against their own records for completeness, then either turns these over to the client or transfers the information to a set of reproducible, in both cases for the client's permanent records.

Redevelopment

Any development that requires demolition or removal of existing structures or impervious surfaces at a site and replacement with new impervious surfaces. Maintenance activities such as top-layer grinding and repaving are not considered to be redevelopment. Interior remodeling projects and tenant improvements are also not considered to be redevelopment.

Regulated Activities

Any earth disturbance activities or any activities that involve the alteration or development of land in a manner that may affect stormwater runoff. Actions or proposed actions that have an impact on stormwater runoff quality or quantity and that are specified in § 78-17 of this article.

Regulated Earth Disturbance Activity

Activity involving earth disturbance subject to regulation under 25 Pa. Code 92, 25 Pa. Code 102, or the Clean Streams Law. Defined under NPDES Phase II regulations as earth disturbance activity of one acre or more with a point source discharge to surface waters or Haverford Township's storm sewer system or five acres or more regardless of the planned runoff. This includes earth disturbance on any portion of, part, or during any stage of a larger common plan of development.

Regulated Impervious Surface

Proposed impervious surface as part of a current proposed activity and all existing impervious surfaces installed after February 15, 2005 as part of a previous activity.

Release Rate

The percentage of existing conditions' peak rate of runoff from a site or subarea to which the proposed conditions' peak rate of runoff must be reduced to protect downstream areas.

Repaving

Replacement of the impervious surface that does not involve reconstruction of an existing paved (impervious) surface.

Replacement Paving

Reconstruction of and full replacement of an existing paved (impervious) surface.

Retention Basin

A structure in which stormwater is stored and not released during the storm event. Retention basins are designed for infiltration purposes and do not have an outlet. The retention basin must infiltrate stored water in four days or less.

Retention Volume/Removed Runoff

The volume of runoff that is captured and not released directly into the surface waters of this Commonwealth during or after a storm event.

Return Period

The average interval, in years, within which a storm event of a given magnitude can be expected to occur one time. For example, the 25-year return period rainfall would be expected to occur on average once every 25 years; or stated in another way, the probability of a 25-year storm occurring in any one year is 0.04 (i.e., a 4% chance).

Riparian

Pertaining to anything connected with or immediately adjacent to the banks of a stream or other body of water.

Riparian Buffer

An area of land adjacent to a body of water and managed to maintain the integrity of stream channels and shorelines to 1) reduce the impact of upland sources of pollution by trapping, filtering, and converting sediments, nutrients, and other chemicals, and 2) supply food, cover and thermal protection to fish and other wildlife.

Riser

A vertical pipe extending from the bottom of a pond that is used to control the discharge rate from the pond for a specified design storm.

Road Maintenance

Earth disturbance activities within the existing road cross section, such as grading and repairing existing unpaved road surfaces, cutting road banks, cleaning or clearing drainage ditches, and other similar activities.

Roof Drains

A drainage conduit or pipe that collects water runoff from a roof and leads it away from the structure.

Rooftop Detention

The temporary ponding and gradual release of stormwater falling directly onto flat roof surfaces using controlled-flow roof drains in building designs.

Runoff

Any part of precipitation that flows over the land surface.

Saldo

Subdivision and Land Development Ordinance.

Sediment

Soils or other materials transported by surface water as a product of erosion.

Sediment Basin

A barrier, dam, or retention or detention basin located and designed in such a way as to retain rock, sand, gravel, silt, or other material transported by water during construction.

Sediment Pollution

The placement, discharge, or any other introduction of sediment into the waters of the commonwealth.

Sedimentation

The process by which mineral or organic matter is accumulated or deposited by the movement of water or air.

Seepage Pit/Seepage Trench

An area of excavated earth filled with loose stone or similar coarse material into which surface water is directed for infiltration into the underground water.

Separate Storm Sewer System

A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains) primarily used for collecting and conveying stormwater runoff.

Shallow Concentrated Flow

Stormwater runoff flowing in shallow, defined ruts prior to entering a defined channel or waterway.

Sheet Flow

A flow process associated with broad, shallow water movement on sloping ground surfaces that is not channelized or concentrated.

Soil Cover Complex Method

A method of runoff computation developed by NRCS that is based on relating soil type and land use/cover to a runoff parameter called curve number (CN).

Source Water Protection Areas (SWPA)

The zone through which contaminants, if present, are likely to migrate and reach a drinking water well or surface water intake.

Special Protection Subwatersheds

Watersheds that have been designated by DEP as EV or HQ waters.

Spillway

A conveyance that is used to pass the peak discharge of the maximum design storm that is controlled by the stormwater facility.

State Water Quality Requirements

The regulatory requirements to protect, maintain, reclaim, and restore water quality under Title 25 of the Pennsylvania Code and the Clean Streams Law.

Storage Indication Method

A reservoir routing procedure based on solution of the continuity equation (inflow minus outflow equals the change in storage) with outflow defined as a function of storage volume and depth.

Storm Frequency

The number of times that a given storm "event" occurs or is exceeded on the average in a stated period of years (see "return period").

Storm Sewer

A system of pipes and/or open channels that conveys intercepted runoff and stormwater from other sources but excludes domestic sewage and industrial wastes.

Stormwater

Drainage runoff from the surface of the land resulting from precipitation or snow or ice melt.

Stormwater Control Measure

Physical features used to effectively control, minimize, and treat stormwater runoff. Also may be referred to as Stormwater Management Practice (SMP). [See Best Management Practice (BMP)].

Stormwater Management District

Those subareas of a watershed in which some type of detention is required to meet the plan requirements and the goals of Act 167.

Stormwater Management Facility

Any structure, natural or man-made, that, due to its condition, design, or construction, conveys, stores, or otherwise affects stormwater runoff quality, rate, or quantity, including Best Management Practices and Stormwater Control Measures. Typical stormwater management facilities include, but are not limited to: detention and retention basins, open channels, storm sewers, pipes, and infiltration facilities.

Stormwater Management Permit (SWM PERMIT)

A permit issued by Haverford Township after the SWM Site plan has been approved.

Stormwater Management Plan

The watershed plan, known as the "Darby and Cobbs Creeks Watershed Act 167 Stormwater Management Plan," for managing those land use activities that will influence stormwater runoff quality and quantity and that would impact the Darby and Cobbs Creeks watershed adopted by Delaware County, Chester County, Montgomery County and Philadelphia County as required by the Act of October 4, 1978, P.L. 864 (Act 167).

Stormwater Management Site Plan (SWM SITE PLAN)

The plan prepared by the developer or his representative indicating how stormwater runoff will be managed at the development site in accordance with this Ordinance. Stormwater Management Site Plan will be designated as SWM Site Plan throughout this Ordinance.

Stream

A natural watercourse.

Stream Buffer

The land area adjacent to each side of a stream essential to maintaining water quality (see "buffer").

Stream Enclosure

A bridge, culvert, or other structure in excess of 100 feet in length upstream to downstream which encloses a regulated water of the commonwealth.

Subarea (Subwatershed)

The smallest drainage unit of a watershed for which stormwater management criteria have been established in the stormwater management plan.

Subdivision

As defined in The Pennsylvania Municipalities Planning Code, Act of July 31, 1968, P.L. 805, No. 247; The division or redivision of a lot, tract, or parcel of land by any means into two or more lots, tracts, parcels, or other divisions of land including changes in existing lot lines for the purpose, whether immediate or future, of lease, partition by the court for distribution to heirs or devisees, transfer of ownership, or building or lot development; provided, however, that the subdivision by lease of land for agricultural purposes into

parcels of more than 10 acres not involving any new street or easement of access or any residential dwelling shall be exempted.

Surface Waters Of The Commonwealth

Any and all rivers, streams, creeks, rivulets, ditches, watercourses, storm sewers, lakes, dammed water, wetlands, ponds, springs, and all other bodies or channels of conveyance of surface waters, or parts thereof, whether natural or artificial, within or on the boundaries of the commonwealth.

Swale

A low-lying stretch of land that gathers or carries surface water runoff.

Timber Operations

See "Forest Management."

Time-Of-Concentration (Tc)

The time required for surface runoff to travel from the hydraulically most distant point of the watershed to a point of interest within the watershed. This time is the combined total of overland flow time and flow time in pipes or channels, if any.

Top-Of-Bank

Highest point of elevation in a stream channel cross section at which a rising water level just begins to flow out of the channel and over the floodplain.

Undeveloped Condition

Natural condition (see also "Predevelopment Condition").

USDA

United States Department of Agriculture

Vernal Pond

Seasonal depressional wetlands that are covered by shallow water for variable periods from winter to spring but may be completely dry for most of the summer and fall.

Watercourse

A channel or conveyance of surface water having a defined bed and banks, whether natural or artificial, with perennial or intermittent flow.

Waters Of This Commonwealth

Any and all rivers, streams, creeks, rivulets, impoundments, ditches, watercourses, storm sewers, lakes, dammed water, wetlands, ponds, springs, and all other bodies or channels of conveyance of surface and underground water, or parts thereof, whether natural or

artificial, within or on the boundaries of this Commonwealth.

Watershed

Region or area drained by a river, watercourse, or other surface water of this Commonwealth.

Wellhead

- A. A structure built over a well;
- B. The source of water for a well.

Wellhead Protection Area

The surface and subsurface area surrounding a water supply well, well field, or spring supplying a public water system through which contaminants are reasonably likely to move toward and reach the water source.

Wet Basin

Pond for urban runoff management that is designed to detain urban runoff and always contains water.

Wetland

Areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions, including swamps, marshes, bogs, and similar areas.

Woods

A natural ground cover with more than one viable tree of a DBH of six inches or greater per 1,500 square feet which existed within three years of application; a cover condition for which SCS curve numbers have been assigned or to which equivalent rational method runoff coefficients have been assigned.

§ 78-25. General Requirements.

For any of the activities regulated by this article, the preliminary or final approval of subdivision and/or land development plans, the issuance of any building or occupancy permit, or the commencement of any earth disturbance activity may not proceed until the property owner or applicant or their agent has received written approval of a SWM site plan from Haverford Township and an adequate erosion and sediment control plan review by the Conservation District.

§ 78-26. SWM site plan contents.

The SWM site plan shall consist of a general description of the project including sequencing items described in § 78-35 [Nonstructural project design (sequencing to minimize stormwater impacts)], calculations, maps, and plans. A note on the maps shall refer to the associated computations and erosion and sediment control plan by title and date. The cover sheet of the computations and erosion and sediment control plan shall refer to the associated maps by title and date. All SWM site plan materials shall be submitted to Haverford Township in a format that is clear, concise, legible, neat, and well organized; otherwise, the SWM Site plan shall not be accepted for review and shall be returned to the applicant. The following items shall be included in the SWM site plan:

A. General.

1. General description of the project including those areas described in § 78-35 [Nonstructural project design (sequencing to minimize stormwater impacts)].
2. General description of proposed permanent stormwater management techniques, including construction specifications of the materials to be used for stormwater management facilities.
3. Complete hydrologic, hydraulic, and structural computations for all stormwater management facilities.
4. An erosion and sediment control plan, including all reviews and letters of adequacy from the Conservation District.
5. A general description of proposed nonpoint source pollution controls.
6. A justification must be included in the SWM Site Plan if BMPs other than green infrastructure methods and LID practices are proposed to achieve the volume, rate, and water quality controls under this Ordinance.
7. The SWM Site Plan Application and completed fee schedule form and associated fee (Appendix C-1).
8. The SWM Site Plan Checklist (Appendix C-2).

B. Maps or Plan Sheets. Map(s) or plan sheets of the project area shall be submitted on twenty-four-inch by thirty-six-inch sheets and/or shall be prepared in a form that meets the requirements for recording at the offices of the Recorder of Deeds of Delaware County. If the SALDO has more stringent criteria than this article, then the more stringent criteria shall apply. The contents of the map(s) shall include, but not be limited to:

1. The location of the project relative to highways, municipal boundaries, or other identifiable landmarks.
2. Existing contours at intervals of two feet.
3. Existing streams, lakes, ponds, or other waters of the commonwealth within the

project area.

4. Other physical features including flood hazard boundaries, stream buffers, existing drainage courses, areas of natural vegetation to be preserved, and the total extent of the upstream area draining through the site.
5. The locations of all existing and proposed utilities, sanitary sewers, and water lines within 50 feet of property lines.
6. An overlay showing soil names and boundaries.
7. Limits of earth disturbance, including the type and amount of impervious area that would be added.
8. Proposed structures, roads, paved areas, and buildings.
9. Final contours at intervals of two feet.
10. The name of the development, the name and address of the owner of the property, and the name of the individual or firm preparing the plan.
11. The date of submission.
12. A graphic and written scale of one-inch equals no more than 50 feet; for tracts of 20 acres or more, the scale shall be one inch equals no more than 100 feet.
13. A north arrow.
14. The total tract boundary and size with distances marked to the nearest foot and bearings to the nearest degree.
15. Existing and proposed land use(s).
16. A key map showing all existing man-made features beyond the property boundary that would be affected by the project.
17. Location of all open channels.
18. Overland drainage patterns and swales.
19. A fifteen-foot-wide access easement around all stormwater management facilities that would provide ingress to and egress from a public right-of-way.
20. The location of all erosion and sediment control facilities.
21. A note on the plan indicating the location and responsibility for maintenance of stormwater management facilities that would be located off site. All off-site facilities shall meet the performance standards and design criteria specified in this article
22. A statement, signed by the applicant, acknowledging that any revision to the approved SWM site plan must be approved by Haverford Township, and that a

revised erosion and sediment control plan must be submitted to the Conservation District for a determination of adequacy.

23. The following signature block signed and sealed by the qualified Licensed Professional responsible for the preparation of the SWM site plan:

"I, (Licensed Professional), on this date (date of signature), hereby certify that the SWM site plan meets all design standards and criteria of the Haverford Township Stormwater Management Code."

24. The following signature block for the Municipality:

"On behalf of Haverford Township, (Municipal Official or Designee), on this date (date of signature), has reviewed and hereby certifies to the best of my knowledge that the SWM Site Plan meets all design standards and criteria of the Haverford Township Stormwater Management Ordinance."

C. Supplemental information to be submitted to Haverford Township.

1. A written description of the following information shall be submitted by the applicant and shall include:
 - a. The overall stormwater management concept for the project designed in accordance with § 78-35, Nonstructural project design (sequencing to minimize stormwater impacts).
 - b. Stormwater runoff computations as specified in this article.
 - c. Stormwater management techniques to be applied both during and after development.
 - d. Expected project time schedule.
 - e. Development stages or project phases, if so proposed.
 - f. An operations and maintenance plan in accordance with § 78-48, Responsibilities for operations and maintenance of stormwater controls and BMPs of this article.
2. An erosion and sediment control plan.
3. A description of the effect of the project (in terms of runoff volumes and peak flows) on adjacent properties and on any existing municipal stormwater collection system that may receive runoff from the project site.
4. A declaration of adequacy and highway occupancy permit from the Pennsylvania Department of Transportation (PennDOT) District office when utilization of a PennDOT storm drainage system is proposed.

D. Stormwater management facilities.

1. All stormwater management facilities must be located on a plan and described in detail.
2. The locations of existing and proposed septic tank infiltration areas and wells must be shown.
3. All calculations, assumptions, and criteria used in the design of the stormwater management facilities must be shown.

§ 78-27. SWM Site Plan submission.

Haverford Township shall require receipt of a complete SWM site plan, as specified in this article.

- A. Proof of application or documentation of required permit(s) or approvals for the programs listed below shall be part of the plan:
 1. NPDES permit for stormwater discharges from construction activities.
 2. DEP joint permit application.
 3. PennDOT highway occupancy permit.
 4. Chapter 105 (Dam Safety and Waterway Management).
 5. Chapter 106 (Floodplain Management).
 6. Any other permit under applicable state or federal regulations.
- B. The plan shall be coordinated with the state and federal permit process and the municipal SALDO review process. The process implementing the provisions in this article is illustrated in Appendixes D-1 and D-2.
- C. For projects that require SALDO approval, the SWM site plan shall be submitted by the applicant as part of the preliminary plan submission where applicable for the regulated activity.
- D. For regulated activities that do not require SALDO approval, see § 78-26, SWM site plan requirements.
- E. Six (6) copies of the SWM site plan shall be submitted and distributed as follows:
 1. Two copies to Haverford Township accompanied by the requisite municipal review fee, as specified in this article.
 2. Two copies to the County Conservation District.
 3. One copy to the municipal Engineer.
 4. One copy to the County Planning Commission/Department.
- F. Any submissions to the agencies listed above that are found to be incomplete shall

not be accepted for review and shall be returned to the applicant with a notification in writing of the specific manner in which the submission is incomplete.

§ 78-28. Stormwater Management (SWM) Site Plan Review.

- A. The municipal Engineer shall review the SWM site plan for consistency with this article and the respective Act 167 stormwater management plan. Any plan found incomplete shall not be accepted for review and shall be returned to the applicant.
- B. The municipal Engineer shall review the SWM site plan for any subdivision or land development against the municipal SALDO provisions not otherwise superseded by this article.
- C. The Conservation District, in accordance with established criteria and procedures, shall review the SWM site plan for consistency with stormwater management and erosion and sediment pollution control requirements and provide comments to Haverford Township. The applicant shall respond to the Conservation District comments on the SWM site plan prior to being considered for final approval by the Township.
- D. For activities regulated by this article, the municipal Engineer shall notify the applicant and Haverford Township in writing whether the SWM site plan is consistent with the stormwater management plan ordinance.
 - (1) If the municipal Engineer determines that the SWM site plan is consistent with the stormwater management ordinance, the Municipal Engineer shall forward a letter of consistency to the Township who will then forward a copy to the applicant.
 - (2) If the Municipal Engineer determines that the SWM site plan is inconsistent or noncompliant with the stormwater management ordinance, the municipal Engineer shall forward a letter to the Township with a copy to the applicant citing the reason(s) and specific Code sections for the inconsistency or noncompliance. Inconsistency or noncompliance may be due to inadequate information to make a reasonable judgment as to compliance with the stormwater management plan. Any SWM site plans that are inconsistent or noncompliant may be revised by the applicant and resubmitted when consistent with this article.
- E. For regulated activities specified in § 78-17, Applicability and Regulated Activities of this article that require a building permit, the Municipal Engineer shall notify the Municipal Building Permit Officer in writing whether the SWM site plan is consistent with the stormwater management ordinance. The Municipal Building Permit Officer shall forward a copy of the consistency/inconsistency letter to the applicant. Any SWM site plan deemed inconsistent may be revised by the applicant and resubmitted consistent with this article.
- F. For regulated activities under this article that require an NPDES permit application, the applicant shall forward a copy of the Township Engineer's letter stating that the SWM site plan is consistent with the stormwater management ordinance to the

Conservation District. DEP and the Conservation District may consider the Township Engineer's review comments in determining whether to issue a permit.

- G. Haverford Township shall not grant preliminary or final approval to any subdivision or land development for regulated activities specified in § 78-17, Applicability and Regulated Activities, of this article if the SWM site plan has been found by the Township Engineer to be inconsistent with the stormwater management ordinance. All required permits from DEP must be obtained prior to approval of any subdivision or land development.
- H. No building permits for any regulated activity specified in § 78-17, Applicability and Regulated Activities of this article shall be approved by Haverford Township if the SWM site plan has been found to be inconsistent with the stormwater management plan, as determined by the Township Engineer and Conservation District, or without considering the comments of the Township Engineer and Conservation District. All required permits from DEP must be obtained prior to issuance of a building permit.
- I. The Applicant shall be responsible for completing record drawings of all stormwater management facilities included in the approved SWM site plan. The record drawings and an explanation of any discrepancies with the design plans shall be submitted to the Township Engineer for final approval. In no case shall Haverford Township approve the record drawings until Haverford Township receives a copy of an approved declaration of adequacy and/or highway occupancy permit from the PennDOT District office, NPDES permit, and any other applicable permits or approvals from DEP or the Conservation District. The above permits and approvals must be based on the record drawings.
- J. Haverford Township's approval of a SWM site plan shall be valid for a period not to exceed five years commencing on the date that Haverford Township signs the approved SWM site plan. If stormwater management facilities included in the approved SWM site plan have not been constructed, or if constructed, record drawings of these facilities have not been approved within this five-year time period, then Haverford Township may consider the SWM site plan inconsistent or noncompliant and may revoke any and all permits. SWM site plans that are determined to be inconsistent or noncompliant by Haverford Township shall be resubmitted in accordance with § 78-30, Resubmission of Inconsistent or Noncompliant SWM Site Plans, of this article.

§ 78-29. Revision of SWM Site Plans.

- A. A revision to a submitted SWM site plan under review by Haverford Township for a development site that involves the following shall require a resubmission to Haverford Township of a revised SWM site plan consistent with § 78-26 of this article and be subject to review as specified in § 78-28 of this article:
 - (1) Change in stormwater management facilities or techniques;

(2) Relocation or redesign of stormwater management facilities; or

(3) Is necessary because soil or other conditions are not as stated on the SWM site plan as determined by the Municipal Engineer.

- B. A revision to an already approved or inconsistent or noncompliant SWM site plan shall be submitted to Haverford Township, accompanied by the applicable municipal review and inspection fee. A revision to a SWM site plan for which a formal action has not been taken by Haverford Township shall be submitted to Haverford Township accompanied by the applicable municipal review and inspection fee.

§ 78-30. Resubmission of inconsistent or noncompliant SWM site plans.

An inconsistent or noncompliant SWM site plan may be resubmitted with the revisions addressing the Township Engineer's concerns documented in writing. It must be addressed to Haverford Township in accordance with § 78-27 contents of this article, distributed accordingly, and be subject to review as specified in § 78-28 of this article. The applicable Township review and inspection fee must accompany a resubmission of an inconsistent or noncompliant SWM site plan.

§78-31. General Requirements for stormwater management.

- A. Applicants proposing regulated activities in Haverford Township which do not fall under the exemption criteria shown in §78-18 shall submit a stormwater management site plan consistent with this ordinance and the applicable watershed stormwater management plan to Haverford Township for review. The stormwater management criteria of this Ordinance shall apply to the total proposed development even if development is to take place in stages.
- B. The applicant is required to design the site to minimize surface discharge of stormwater and the creation of impervious surfaces in order to maintain, as much as possible, the natural hydrologic regime.
- C. The SWM site plan must be designed consistent with the sequencing provisions of §78-35 to ensure maintenance of the natural hydrologic regime, to promote infiltration, and to protect groundwater and surface water quality and quantity. The SWM site plan designer must proceed sequentially in accordance with this Ordinance.
- D. Stormwater drainage systems shall be designed in order to preserve natural flow conditions to the maximum extent practicable.
- E. Alteration of existing drainage discharge onto adjacent property shall only be proposed in accordance with PADEP guidance document "Chapter 102 Off-Site Discharges of Stormwater to Non-Surface Waters – Frequently Asked Questions (FAQ)" dated January 2, 2019, or latest guidance document from PADEP. Such discharge shall be subject to any applicable discharge criteria specified in this Ordinance and still must meet the requirements of Act 167.

- F. Areas of existing diffused drainage discharge, whether proposed to be concentrated or maintained as diffused drainage areas, shall be subject to any applicable discharge criteria in the general direction of existing discharge, except as otherwise provided by this Ordinance. If diffused drainage discharge is proposed to be concentrated and discharged onto adjacent property, the Applicant must document that adequate downstream conveyance facilities exist to safely transport the concentrated discharge or otherwise prove that no erosion, sedimentation, flooding, or other impacts will result from the concentrated discharge.
- G. Where a development site is traversed by a stream, drainage easements shall be provided on either side of, and conform to the line of such streams. The terms of the easement shall conform to the stream buffer requirements contained in §78-42.
- H. Any stormwater management facilities regulated by this article that would be located in or adjacent to waters of the commonwealth or delineated wetlands shall be subject to approval by DEP through the joint permit application or the environmental assessment approval process or, where deemed appropriate, by the DEP general permit process. When there is a question as to whether wetlands may be involved, it is the responsibility of the applicant or his agent to show that the land in question cannot be classified as wetlands; otherwise, approval to work in the area must be obtained from DEP
- I. Any proposed stormwater management facilities regulated by this article that would be located on state highway rights-of-way shall be subject to approval by PennDOT.
- J. Minimization of impervious surfaces and infiltration of runoff through seepage beds, infiltration trenches, etc., is encouraged where soil conditions permit in order to reduce the size or eliminate the need for detention facilities or other structural BMPs.
- K. Rooftop runoff may go directly to an infiltration BMP or be evapotranspired.
- L. All regulated activities within the Municipality shall be designed, implemented, operated, and maintained to meet the purposes of this Ordinance, through these two elements:
 1. Erosion and sediment control during earth disturbance activities (e.g., during construction), and
 2. Water quality protection measures after completion of earth disturbance activities (i.e., after construction), including operations and maintenance.
- M. No regulated activity within the Municipality shall commence until the Municipality issues approval of a SWM plan, which demonstrates compliance with the requirements of this ordinance.
- N. The BMPs shall be designed, implemented, and maintained to meet state water quality requirements and any other more stringent requirements as determined by the Township. Applicants shall utilize the Pennsylvania Stormwater Best Management

Practices Manual (PA BMP Manual), as amended, or other sources acceptable to the Township Engineer, for testing and design standards for BMPs, and where there is a conflict with the provisions of this Ordinance, the most restrictive applies.

- O. Post-construction water quality protection shall be addressed as required by §78-37.
- P. Operations and maintenance of permanent stormwater BMPs shall be addressed as required by this article.
- Q. All BMPs used to meet the requirements of this Ordinance shall conform to the state water quality requirements and any more stringent requirements as set forth by Haverford Township.
- R. Techniques described in Appendix E (Low Impact Development) of this Ordinance and green infrastructure methods shall be prioritized because they reduce the costs of complying with the requirements of this Ordinance and the state water quality requirements.
- S. In selecting the appropriate BMPs or combinations thereof, the Applicant shall consider the following:
 - 1. Total contributing drainage area.
 - 2. Permeability and infiltration rate of the site's soils.
 - 3. Slope and depth to bedrock.
 - 4. Seasonal high water table.
 - 5. Proximity to building foundations and wellheads.
 - 6. Erodibility of soils.
 - 7. Land availability and configuration of the topography.
 - 8. Peak discharge and required volume control.
 - 9. Stream bank erosion.
 - 10. Efficiency of the BMPs to mitigate potential water quality problems.
 - 11. The volume of runoff that will be effectively treated.
 - 12. The nature of the pollutant being removed.
 - 13. Maintenance requirements.
 - 14. Creation/protection of aquatic and wildlife habitat.
 - 15. Recreational value.
 - 16. Enhancement of aesthetic and property values.

- T. The design of all stormwater management facilities shall incorporate sound engineering principles and practices in a manner that does not aggravate existing stormwater problems. The Township reserves the right to disapprove any design that would result in construction in or continuation of a stormwater problem area.
- U. The applicant may meet the stormwater management criteria through off-site stormwater management measures as long as the proposed measures are in the same subwatershed as shown in Ordinance Appendix A.
- V. The following standards for protection of adjacent and downgradient properties from off-site conveyance must be accomplished:

For any location where a new concentrated discharge of stormwater from any frequency rainfall event, up to and including the 100-year storm and the volume of runoff up to and including the 2-year storm onto or through adjacent property(ies) or downgradient property(ies), the following are required:

1. A drainage easement (or other legal agreement/approval) must be obtained for conveyance of discharges onto or through adjacent properties per the PADEP guidance document “Chapter 102 Off-Site Discharges of Stormwater to Non-Surface Wasters – Frequently Asked Questions (FAQ)” dated January 2, 2019, or latest guidance document from PADEP.
2. The conveyance must be designed to avoid erosion, flooding, or other damage to the properties through which it is being conveyed.

§ 78-32. Authorization to Construct and Term of Validity.

Haverford Township’s approval of an SWM Site Plan authorizes the regulated activities contained in the SWM Site Plan for a maximum term of validity of 5 years following the date of approval. The Township may specify a term of validity shorter than 5 years in the approval for any specific SWM Site Plan. Terms of validity shall commence on the date the Municipality signs the approval for an SWM Site Plan. If an approved SWM Site Plan is not completed according to Section § 78-33, Permit requirements by other governmental entities; As-Built Plans, Completion Certificate, and Final inspection, within the term of validity, then the Municipality may consider the SWM Site Plan disapproved and may revoke any and all permits. SWM Site Plans that are considered disapproved by the shall be resubmitted in accordance with Section § 78-30 of this Ordinance.

§ 78-33. Permit requirements by other governmental entities.

The following permit requirements may apply to certain regulated earth disturbance activities and must be met prior to commencement of regulated earth disturbance activities, as applicable:

- A. All regulated earth disturbance activities subject to permit requirements by DEP under regulations at 25 Pennsylvania Code Chapter 102.

- B. Work within natural drainageways subject to permit by DEP under 25 Pennsylvania Code Chapter 105.
- C. Any stormwater management facility that would be located in or adjacent to surface waters of the commonwealth, including wetlands, subject to permit by DEP under 25 Pennsylvania Code Chapter 105.
- D. Any stormwater management facility that would be located on a state highway right-of-way or require access from a state highway shall be subject to approval by PennDOT.
- E. Culverts, bridges, storm sewers, or any other facilities which must pass or convey flows from the tributary area and any facility which may constitute a dam, subject to permit by DEP under 25 Pennsylvania Code Chapter 105.

§ 78-34. Erosion and sediment control during regulated earth disturbance activities.

- A. No regulated earth disturbance activities within Haverford Township shall commence until Haverford Township receives an approval from the Conservation District of an erosion and sediment control plan for construction activities.
- B. DEP has regulations that require an erosion and sediment control plan for any earth disturbance activity of 5,000 square feet or more, under 25 Pennsylvania Code § 102.4(b).
- C. In addition, under 25 Pennsylvania Code Chapter 92, a DEP "NPDES construction activities" permit is required for regulated earth disturbance activities. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate DEP regional office or County Conservation District must be provided to Haverford Township.
- D. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate PA DEP regional office or County Conservation District must be provided to the Township. The issuance of an NPDES construction permit (or permit coverage under the statewide General Permit (PAG-2)) satisfies the requirements of §78-33.
- E. A copy of the erosion and sediment control plan and any required permit, as required by DEP regulations, shall be available on the project site at all times.
- F. Additional erosion and sediment control design standards and criteria are recommended to be applied where infiltration BMPs are proposed. They shall include the following:
 - (1) Areas proposed for infiltration BMPs shall be protected from sedimentation and compaction during the construction phase to maintain maximum infiltration capacity.

- (2) Infiltration BMPs shall not be constructed nor receive runoff until the entire drainage area contributory to the infiltration BMP has achieved final stabilization.

§ 78-35. Nonstructural project design (sequencing to minimize stormwater impacts).

A. The design of all regulated activities shall include the following to minimize stormwater impacts.

- (1) The applicant shall find practicable alternatives to the surface discharge of stormwater, such as those listed in Appendix F, Table F-5, the creation of impervious surfaces, and the degradation of waters of the commonwealth and must maintain as much as possible the natural hydrologic regime of the site.
- (2) The applicant shall apply Low Impact Development (LID) methods such as those listed in Appendix E, provided that use of this method does not conflict with other local codes.
- (3) An alternative is practicable if it is available and capable of implementation after taking into consideration existing technology and logistics in light of overall project purposes and other municipal requirements.
- (4) All practicable alternatives to the discharge of stormwater are presumed to have less adverse impact on quantity and quality of waters of the commonwealth unless otherwise demonstrated.

B. The applicant shall demonstrate that the regulated activities were designed in the following sequence. The goal of the sequence is to minimize the increases in stormwater runoff and impacts to water quality resulting from the proposed regulated activity:

- (1) Prepare an existing resource and site analysis map (ERSAM) showing environmentally sensitive areas, including but not limited to, steep slopes, ponds, lakes, streams, wetlands, hydric soils, vernal pools, stream buffers and hydrologic soil groups. Land development, any existing recharge areas, and other requirements outlined in the municipal SALDO shall also be included.
- (2) Establish a stream buffer according to § 78-42.
- (3) Prepare a draft project layout avoiding sensitive areas identified in Subsection B(1).
- (4) Identify site-specific existing conditions drainage areas, discharge points, recharge areas, and hydrologic soil groups A and B (areas conducive to infiltration).
- (5) Evaluate nonstructural stormwater management alternatives:
 - (a) Minimize earth disturbance.
 - (b) Minimize impervious surfaces.

- (c) Break up large impervious surfaces.
- (6) Satisfy the infiltration volume requirements (§ 78-36) and provide for stormwater pretreatment prior to infiltration.
- (7) Provide for water quality protection in accordance with § 78-37 water quality requirements.
- (8) Provide streambank erosion protection in accordance with § 78-38 streambank erosion requirements.
- (9) Determine into what management district the site falls (Appendix A) and conduct an existing conditions runoff analysis.
- (10) Prepare final project design to maintain existing conditions drainage areas and discharge points, to minimize earth disturbance and impervious surfaces and, to the maximum extent possible, to ensure that the remaining site development has no surface or point discharge.
- (11) Conduct a proposed conditions runoff analysis based on the final design that meets the management district requirements (§ 78-39).
- (12) Manage any remaining runoff prior to discharge through detention, bioretention, direct discharge or other structural control.

§ 78-36. Infiltration Volume Requirements

Providing for infiltration consistent with the natural hydrologic regime is required. Design of the infiltration facilities shall consider infiltration to compensate for the reduction in the recharge that occurs when the ground surface is disturbed or impervious surface is created. It is recommended that roof runoff be directed to infiltration BMPs that may be designed to compensate for the runoff from parking areas. These measures are required to be consistent with § 78-17 and to take advantage of utilizing any existing recharge areas. Infiltration may not be feasible on every site due to site-specific limitations such as soil type. If it cannot be physically accomplished, then the design professional shall be responsible to show that this cannot be physically accomplished.

If it cannot be physically accomplished, then the design professional shall be responsible for demonstrating to the satisfaction of the municipality that this cannot be physically accomplished on the site (e.g., shallow depth to bedrock or limiting zone, open voids, steep slopes, etc. per the PA BMP Manual. A financial hardship as defined in §78-24 is not acceptable to avoid implementing infiltration facilities. If infiltration can be physically accomplished, the volume of runoff to be infiltrated shall be determined from §78-36.A(2) depending on demonstrated site conditions, and shall be the greatest volume that can be physically infiltrated or alternative methods consistent with the PA BMP Manual (as amended) or other PADEP guidance, such as the Managed Release Concept, may be used to manage this volume with approval from the Municipal Engineer. For example:

- Any applicant (developer or redeveloper) shall first attempt to infiltrate the volume

required in §78-36.A(2)[a].

- If the §78-36.A(2)[a] requirement cannot be physically accomplished, then the applicant is required to attempt to infiltrate the volume required in §78-36.A(2)[b].
- Finally, if the §78-36.A(2)[b] infiltration volume cannot be physically accomplished, the applicant must, at a minimum, infiltrate the volume required in §78-36.A(2)[c].

A. Infiltration BMPs shall meet the following minimum requirements:

1. Infiltration BMPs intended to receive runoff from developed areas shall be selected based on suitability of soils and site conditions and shall be constructed on soils that have the following characteristics:

a. A minimum depth of 24 inches between the bottom of the BMP and the top of the limiting zone unless bioretention is used.

b. An infiltration rate sufficient to accept the additional stormwater load and dewater completely as determined by field tests conducted by the applicant's design professional.

c. The infiltration facility shall be capable of completely infiltrating the retention (infiltration) volume (Re_v) below grade within four days (96 hours).

d. Pretreatment shall be provided prior to infiltration.

2. The size of the infiltration facility shall be based upon the following volume criteria:

a. Modified Control Guideline One (MCG-1) of the PA BMP Manual – The retention (infiltration) volume (Re_v) to be captured and infiltrated shall be the net 2-year 24-hour volume. The net volume is the difference between the post-development runoff volume and the pre-development runoff volume. The post-development total runoff volume for all storms equal to or less than the 2-year 24-hour duration precipitation shall not be increased. For modeling purposes, existing (pre-development) non-forested pervious areas must be considered meadow in good condition or its equivalent, and twenty (20) percent of existing impervious area, when present, shall be considered meadow in good condition.

b. Infiltrating the entire Re_v volume in Section §78-36.A(2)[a] (above) may not be feasible on every site due to site-specific limitations such as shallow depth to bedrock or the water table. If it cannot be physically accomplished, then the following criteria from Modified Control Guideline Two (MCG-2) of the PA BMP Manual must be satisfied:

At least the first one-inch (1.0") of runoff from new or replacement impervious surfaces shall be infiltrated.

$Re_v = 1 \text{ (inch)} * \text{impervious area (square feet)} \div 12 \text{ (inches)} = \text{cubic feet (cf)}$

An asterisk (*) in equations denotes multiplication.

- c. Only if infiltrating the entire Re_v volume in §78-36.A(2)[b] cannot be physically accomplished, then the following minimum criteria from Modified Control Guideline Two (MCG-2) of the PA BMP Manual must be satisfied:

Wherever possible, infiltration facilities should be designed to accommodate infiltration of the entire water quality volume (WQv) in §78-36.A(2)[a]; however, in all cases at least the first one-half inch (0.5") of the WQv shall be infiltrated. The minimum infiltration volume (Re_v) required would, therefore, be computed as:

$$Re_v = I * \text{impervious area (square feet)} \div 12 \text{ (inches)} = \text{cubic feet (cf)}$$

An asterisk (*) in equations denotes multiplication.

Where:

I = The maximum equivalent infiltration amount (inches) that the site can physically accept or 0.50 inch, whichever is greater.

The retention volume values derived from the methods in §78-36.A(2)[a], §78-36.A(2)[b], or §78-36.A(2)[c] is the minimum volume the Applicant must control through an infiltration BMP facility. If site conditions preclude capture of runoff from portions of the impervious area, the infiltration volume for the remaining area should be increased an equivalent amount to offset the loss.

Only if the minimum of 0.50 inch of infiltration requirement cannot be physically accomplished, a waiver from §78-36, Infiltration Volume Requirements, is required from the Municipality.

- B. Soils. A detailed soils evaluation of the project site shall be required to determine the suitability of infiltration facilities. The evaluation shall be performed by a qualified design professional and at a minimum address soil permeability, depth to bedrock, and subgrade stability. The general process for designing the infiltration BMP shall be:

1. Analyze hydrologic soil groups as well as natural and man-made features within the site to determine general areas of suitability for infiltration practices. In areas where development on fill material is under consideration, conduct geotechnical investigations of subgrade stability; infiltration may not be ruled out without conducting these tests.
2. Provide field tests such as required in the PA BMP Manual.
3. Design the infiltration structure for the required retention (Re_v) volume based on field-determined capacity at the level of the proposed infiltration surface.
4. If on-lot infiltration structures are proposed by the applicant's design

professional, it must be demonstrated to Haverford Township that the soils are conducive to infiltrate on the lots identified.

C. Stormwater hotspots.

(1) Below is a list of examples of designated hotspots. If a site is designated as a hotspot, it has important implications for how stormwater is managed. First and foremost, untreated stormwater runoff from hotspots shall not be allowed to recharge into groundwater where it may contaminate water supplies. Therefore, the groundwater recharge requirement shall NOT be applied to development sites that fit into the hotspot category (the entire WQv must still be treated). Second, a greater level of stormwater treatment shall be considered at hotspot sites to prevent pollutant wash off after construction. The Environmental Protection Agency's (EPA) NPDES stormwater program requires some industrial sites to prepare and implement a stormwater pollution prevention plan. Stormwater runoff from hotspots shall be pretreated prior to surface or groundwater infiltration to prevent pollutant runoff. Industrial sites referenced in 40 CFR 125 are examples of hotspots.

(a) Examples of hotspots:

Vehicle salvage yards and recycling facilities

Vehicle fueling stations

Vehicle service and maintenance facilities

Vehicle and equipment cleaning facilities

Fleet storage areas (bus, truck, etc.)

Industrial sites based on Standard Industrial Codes

Marinas (service and maintenance)

Outdoor liquid container storage

Outdoor loading/unloading facilities

Public works storage areas

Facilities that generate or store hazardous materials

Commercial container nursery

Contaminated sites/brownfields

Other land uses and activities as designated by an appropriate review authority

(b) The following land uses and activities are not normally considered hotspots:

Residential streets and rural highways

Residential development

Institutional development

Office developments

Nonindustrial rooftops

Pervious areas, except golf courses and nurseries [which may need an integrated pest management (IPM) plan].

(2) While large highways [average daily traffic volume (ADT) greater than 30,000] are not designated as stormwater hotspots, it is important to ensure that highway stormwater management plans adequately protect groundwater.

(3) The Environmental Protection Agency's (EPA) NPDES stormwater program requires some industrial sites to prepare and implement a stormwater pollution prevention plan.

- D. Infiltration facilities should, to the greatest extent practicable, be located to avoid introducing contaminants via groundwater, and be in conformance with an approved source water protection assessment or source water protection plan.
- E. Roadway drainage systems should provide an opportunity to capture accidental spills. Road de-icing material storage facilities shall be designed to avoid salt and chloride runoff from entering waterways and infiltration facilities. The qualified design professional shall evaluate the possibility of groundwater contamination from the proposed infiltration facility and perform a hydrologic justification study if possible.
- F. Extreme caution shall be exercised where infiltration is proposed in SWPAs as defined by the local municipality or water authority.
- G. Infiltration facilities shall be used in conjunction with other innovative or traditional BMPs, stormwater control facilities, and nonstructural stormwater management alternatives.
- H. Extreme caution shall be exercised where salt or chloride (municipal salt storage) would be a pollutant since soils do little to filter this pollutant, and it may contaminate the groundwater. The qualified design professional shall evaluate the possibility of groundwater contamination from the proposed infiltration facility and perform a hydrogeologic justification study if necessary.
- I. The antidegradation analysis found in Chapter 93 shall be applied in HQ or EV streams.
- J. An impermeable liner will be required in detention basins where the possibility of

groundwater contamination exists. A detailed hydrogeologic investigation may be required by Haverford Township.

- K. Haverford Township shall require the applicant to provide safeguards against groundwater contamination for land uses that may cause groundwater contamination should there be a mishap or spill.

§ 78-37. Water quality requirements.

The applicant shall comply with the following water quality requirements of this article.

A. No regulated earth disturbance activities within Haverford Township shall commence until approval by Haverford Township of a plan which demonstrates compliance with postconstruction state water quality requirements.

B. The BMPs shall be designed, implemented, and maintained to meet state water quality requirements and any other more stringent requirements as determined by Haverford Township.

C. To control post-construction stormwater impacts from regulated activities and conform to state water quality requirements, BMPs which replicate pre-development stormwater infiltration and runoff conditions must be provided in the site design such that post-construction stormwater discharges do not degrade the physical, chemical, or biological characteristics of the receiving waters. The green infrastructure and Low Impact Development (LID) practices provided in the PA BMP Manual, as well as the guidance on green infrastructure and LID provided in Appendix E shall be utilized for all regulated activities wherever possible. This may be achieved by the following:

- (1) Infiltration: replication of preconstruction stormwater infiltration conditions;
- (2) Treatment: use of water quality treatment BMPs to ensure filtering out of the chemical and physical pollutants from the stormwater runoff; and
- (3) Streambank and streambed protection: management of volume and rate of postconstruction stormwater discharges to prevent physical degradation of receiving waters (e.g., from scouring).

D. Developed areas shall provide adequate storage and treatment facilities necessary to capture and treat stormwater runoff. The infiltration volume computed under § 78-36 may be a component of the water quality volume if the applicant chooses to manage both components in a single facility. If the infiltration volume is less than the water quality volume, the remaining water quality volume may be captured and treated by methods other than infiltration BMPs. The required water quality volume (WQv) is the storage capacity needed to capture and treat a portion of stormwater runoff from the developed areas of the site.

- (1) To achieve this goal, the following criterion is established:

The Post-construction total runoff volume shall not exceed the Predevelopment total runoff volume for all storms equal to or less than the two-year, 24-hour duration precipitation (design storm). If the Township Engineer concurs that this criterion cannot be met, a minimum of one half (0.5)-inches of runoff from all Regulated Impervious Surfaces shall be managed. For modeling purposes, existing (pre-development) non-forested pervious areas must be considered meadow in good condition or its equivalent, and twenty (20) percent of existing impervious area, when present, shall be considered meadow in good condition.

This volume requirement can be managed by the permanent volume of a wet basin or the detained volume from other BMPs. Where appropriate, wet basins shall be utilized for water quality control and shall follow the guidelines of the PA BMP Manual referenced in Appendix G.

Release of water can begin at the the start of the storm (i.e. the invert of the water quality orifice is at the inver of the facility). The design of the facility shall provide for protection from clogging and unwanted sedimentation.

- E. For areas within defined special protection subwatersheds that include EV and HQ waters, the temperature and quality of water and streams shall be maintained through the use of temperature-sensitive BMPs and stormwater conveyance systems.
- F. To accomplish the above, the applicant shall submit original and innovative designs to the Township engineer for review and approval. Such designs may achieve the water quality objectives through a combination of different BMPs.
- G. Evapotranspiration may be quantified and credited towards meeting volume requirements according to the PADEP Post Construction Stormwater Management (PCSM) Spreadsheet and Instructions (December 2020) or the most recent guidance from PADEP.
- H. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate DEP regional office must be provided to Haverford Township.

§ 78-38. Streambank erosion requirements.

A. In addition to the control of water quality volume (in order to minimize the impact of stormwater runoff on downstream streambank erosion), the primary requirement is to design a BMP to detain the proposed conditions two-year, twenty-four-hour design storm to the existing conditions one-year flow using the SCS Type II distribution. Additionally, provisions shall be made (such as adding a small orifice at the bottom of the outlet structure) so that the proposed conditions one-year storm takes a minimum of 24 hours to drain from the facility from a point where the maximum volume of water from the one-year storm is captured (i.e., the maximum water surface elevation is achieved in the facility). Release of water can begin at the start of the storm (i.e., the invert of the water quality orifice is at the invert of the facility).

B. The minimum orifice size in the outlet structure to the BMP shall be three inches in diameter where possible, and a trash rack shall be installed to prevent clogging. On sites with small drainage areas contributing to this BMP that do not provide enough runoff volume to allow a twenty-four-hour attenuation with the three-inch orifice, the calculations shall be submitted showing this condition. Orifice sizes less than three inches can be utilized, provided that the design will prevent clogging of the intake.

C. In "Conditional Direct Discharge Districts" (District C) only (see § 78-39), the objective is not to attenuate the storms greater than the two-year recurrence interval. This can be accomplished by configuring the outlet structure not to control the larger storms or by a bypass channel that diverts only the two-year stormwater runoff into the basin or conversely, diverts flows in excess of the two-year storm away from the basin.

§ 78-39. Stormwater peak rate control and management districts.

A. The Darby and Cobbs Creeks watershed has been divided into stormwater management districts as shown on the Management District Map in Appendix A. In addition to the requirements specified in Table 408.1 below, the erosion and sedimentation control (§ 78-34), the nonstructural project design (§ 78-35), the infiltration volume requirements (§ 78-36), the water quality (§ 78-37), and the streambank erosion (§ 78-38) requirements shall be implemented.

(1) Standards for managing runoff from each subarea in the Darby and Cobbs Creeks watershed for the two-, five-, ten-, twenty-five-, fifty-, and one-hundred-year design storms are shown in Table 408.1. Development sites located in each of the management districts must control proposed conditions runoff rates to existing conditions runoff rates for the design storms in accordance with Table 408.1.

Table 408.1

Peak Rate Control Standards by Stormwater

Management District in the

Darby-Cobbs Creek Watershed

District	Proposed Condition Design Storm	Existing Condition Design Storm
A	2 – year	1 – year
	5 – year	5 – year
	10 – year	10 – year

	100 – year	100 – year

Table 408.1

B-1	2 – year	1 – year
	10 – year	5 – year
	25 – year	10 – year
	50 – year	25 – year
	100 – year	100 – year
B-2	2 – year	1 – year
	5 – year	2 – year
	25 – year	5 – year
	50 – year	10 – year
	100 – year	100 – year

C Conditional Direct Discharge District

(2) In District C, development sites that can discharge directly to the Darby-Cobbs Creek main channel, major tributaries, or indirectly to the main channel through an existing stormwater drainage system (i.e., storm sewer or tributary) may do so without control of the proposed conditions peak rate of runoff greater than the five-year storm. Sites in District C will still have to comply with the groundwater recharge and infiltration volume requirement criteria, the water quality criteria, and streambank erosion criteria. If the proposed conditions runoff is intended to be conveyed by an existing stormwater drainage system to the main channel, assurance must be provided that such system has adequate capacity to convey the flows greater than the two-year existing conditions peak flow or will be provided with improvements to furnish the required capacity. When adequate capacity in the downstream system does not exist and will not be provided through improvements, the proposed conditions peak rate of runoff must be controlled to the existing conditions peak rate as required in District A provisions (i.e., ten-year proposed conditions flows to ten-year existing conditions flows) for the specified design storms.

B. General. Proposed conditions rates of runoff from any regulated activity shall not exceed the peak release rates of runoff from existing conditions for the design storms specified on the Stormwater Management District Watershed Map (Appendix A) and this section of the article.

C. District boundaries. The boundaries of the stormwater management districts are shown on an official map that is available for inspection at the municipal and County Planning offices. A copy of the official map at a reduced scale is included in Appendix A. The

exact location of the stormwater management district boundaries as they apply to a given development site shall be determined by mapping the boundaries using the two-foot topographic contours (or most accurate data required) provided as part of the SWM site plan.

- D. Sites located in more than one district. For a proposed development site located within two or more stormwater management district category subareas, the peak discharge rate from any subarea shall meet the management district criteria for which the discharge is located. The calculated peak discharges shall apply regardless of whether the grading plan changes the drainage area by subarea. An exception to the above may be granted if discharges from multiple subareas recombine in proximity to the discharge site. In this case, peak discharge in any direction may follow Management District A criteria, provided that the overall site discharge meets the management district criteria for which the discharge is located.
- E. Off-site areas. Off-site areas that drain through a proposed development site are not subject to release rate criteria when determining allowable peak runoff rates. However, on-site drainage facilities shall be designed to safely convey off-site flows through the development site.
- F. Site areas. Where the site area to be impacted by a proposed development activity differs significantly from the total site area, only the proposed impact area utilizing stormwater management measures shall be subject to the management district criteria. In other words, unimpacted areas bypassing the stormwater management facilities would not be subject to the management district criteria.
- G. "No harm" option. For any proposed development site not located in a Conditional Direct Discharge District, the applicant has the option of using a less-restrictive runoff control (including no detention) if the applicant can prove that "no harm" would be caused by discharging at a higher runoff rate than that specified by the stormwater management plan. The "no harm" option is used when an Applicant can prove that the proposed conditions hydrographs can match existing conditions hydrographs and if it can be proved that the proposed conditions will not cause increases in peaks at all points downstream. Proof of "no harm" must be shown based upon the following downstream impact evaluation which shall include a downstream hydraulic capacity analysis consistent with Subsection **H** to determine if adequate hydraulic capacity exists. The applicant shall submit to Haverford Township this evaluation of the impacts due to increased downstream stormwater flows in the watershed.
 - (1) The hydrologic regime of the site must be maintained.
 - (2) The downstream impact evaluation shall include hydrologic and hydraulic calculations necessary to determine the impact of hydrograph timing modifications due to the proposed development upon a dam, highway, structure, natural point of restricted streamflow, or any stream channel section established with the concurrence of the municipality.

- (3) The evaluation shall continue downstream until the increase in flow diminishes due to additional flow from tributaries and/or stream attenuation.
- (4) The peak flow values to be used for downstream areas for the design return period storms (two-, five-, ten-, fifty-, and one-hundred-year) shall be the values from the calibrated model for the respective watershed. These flow values can be obtained from the original Act 167 watershed stormwater management plans.
- (5) Applicant-proposed runoff controls which would generate increased peak flow rates at storm drainage problem areas would, by definition, be precluded from successful attempts to prove "no-harm," except in conjunction with proposed capacity improvements for the problem areas consistent with Subsection H.
- (6) Financial distress shall not constitute grounds for the municipality to approve the use of the "no-harm" option.
- (7) Capacity improvements to conveyance facilities or obstructions may be provided as necessary to implement the "no harm" option as long as it can be demonstrated through the downstream hydraulic capacity analysis that the improvements would not create any harm downstream.
- (8) Any "no harm" justifications shall be submitted by the applicant as part of the SWM site plan submission per this article.

H. Downstream hydraulic capacity analysis. Any downstream hydraulic capacity analysis conducted in accordance with this article shall use the following criteria for determining adequacy for accepting increased peak flow rates:

- (1) Natural or man-made channels or swales must be able to convey the increased runoff associated with a two-year return period event within their banks at velocities consistent with protection of the channels from erosion. Acceptable velocities shall be based upon criteria included in the DEP Erosion and Sediment Pollution Control Program Manual.
 - (2) Natural or man-made channels or swales must be able to convey increased twenty-five-year return period runoff without creating any hazard to persons or property.
 - (3) Culverts, bridges, storm sewers, or any other facilities which need to pass or convey flows from the tributary area must be designed in accordance with DEP Chapter 105 regulations (if applicable) and, at minimum, pass the increased twenty-five-year return period runoff.
 - (4) Water quality requirements as defined in §78-37.
 - (5) Post-construction peak rates shall not exceed the existing peak rates for the respective sub-area.
- I. Alternate criteria for redevelopment sites. For redevelopment sites, one of the following minimum design parameters shall be accomplished, whichever is most appropriate for

the given site conditions as determined by Haverford Township;

- (1) Meet the full requirements specified by Table 408.1 and Stormwater peak rate control and management districts, § 78-39 ; or
- (2) Reduce the total pre-development impervious surface on the site by at least 20% based upon a comparison of existing impervious surface to regulated impervious surface. In this case, calculations must be provided that show the peak rate has not increased.

§ 78-40. Calculation Methodology.

A. Stormwater runoff from all development sites with a drainage area of greater than five (5) acres shall be calculated using a generally accepted calculation technique that is based on the NRCS soil cover complex method. Table 409.1 summarizes acceptable computation methods, and the method selected by the design professional shall be based on the individual limitations and suitability of each method for a particular site. Credits providing an automatic reduction in impervious area and a corresponding reduction in stormwater impacts for the reduction of design volume, peak rate, and channel protection are available for protecting existing trees as well as revegetating and reforestation as outlined in the PA DEP BMP Manual, for sites with earth disturbance of one (1) acre or greater. No more than 25% of the Volume Reduction may be met through Nonstructural BMP credits.

ss

Table 409.1

**Acceptable Computation Methodologies
For Stormwater Management Plans**

Method	Developed By	Applicability
TR-20 (or commercial computer package based on TR-20)	USDA NRCS	Applicable where use of full hydrology computer model is desirable or necessary.
TR-55 (or commercial computer package based on TR-55)	USDA NRCS	Applicable for land development plans where limitations described in TR-55.
HEC-1/HEC-HMS	US Army Corps of Engineers	Applicable where use of a full hydrologic computer is desirable or necessary.
PSRM	Penn State University	Applicable where use of a hydrologic model is desirable or necessary; simpler than TR-20 or

Table 409.1

		HEC-1.
Other methods	Varies	Other computation methodologies approved by the municipality and/or municipal Engineer.
HEC RAS	US Army Corp of Engineers	"No harm" option

B. All calculations consistent with this article using the soil cover complex method shall use the appropriate design rainfall depths for the various return period storms. Rainfall depths shall be according to NOAA Atlas 14 values consistent with a partial duration series. When stormwater calculations are performed for routing procedures or water quality functions, the duration of rainfall shall be twenty-four (24) hours.

C. The following criteria shall be used for runoff calculations:

(1) For development sites not considered redevelopment, the ground cover used in determining the existing conditions flow rates shall be as follows:

(a) Wooded sites shall use a ground cover of "woods in good condition." Portions of a site having more than one viable tree of a DBH of six inches or greater per 1,500 square feet shall be considered "wooded" where such trees existed within three years of application.

(b) The undeveloped portion of the site including agriculture, bare earth and fallow ground, shall be considered as "meadow in good condition," unless the natural ground cover generates a lower curve (CN) number or Rational "c" value (i.e., woods) as listed in Tables F-2 or F-3 in Appendix F of this article.

(2) For development and redevelopment sites, the ground cover used in determining the existing conditions flow rates for the developed portion of the site shall be based upon actual land cover conditions.

D. All calculations using the Rational Method shall use rainfall intensities consistent with appropriate times of concentration (duration) and storm events with rainfall intensities obtained from NOAA Atlas 14 partial duration series estimates, or the latest version of the PennDOT Drainage Manual (PDM Publication 584). Times of concentration shall be calculated based on the methodology recommended in the respective model used. Times of concentration for channel and pipe flow shall be computed using a minimum of five (5) minutes.

E. Runoff curve numbers (CN) for both existing and proposed conditions to be used in the

soil cover complex method shall be obtained from Table F-2 in Appendix F of this article.

- F. Runoff coefficients (c) for both existing and proposed conditions for use in the rational method shall be obtained from Table F-3 in Appendix F of this article.
- G. Hydraulic computations to determine the capacity of pipes, culverts, and storm sewers shall be consistent with methods and computations contained in the Federal Highway Administration Hydraulic Design Series Number 5 (Publication No. FWHA-NHI-01-020 HDS No. 5). Hydraulic computations to determine the capacity of open channels shall be consistent with methods and computations contained in the Federal Highway Administration Hydraulic Engineering Circular Number 15 (Publication No. FHWA-BHI-05-114 HEC 15). Values for Manning's roughness coefficient (n) shall be consistent with Table F-4 in Appendix F.
- H. Outlet structures for stormwater management facilities shall be designed to meet the performance standards of this article using any generally accepted hydraulic analysis technique or method.
- I. The design of any stormwater detention facilities intended to meet the performance standards of this article shall be verified by routing the design storm hydrograph through these facilities using the storage-indication method. The design storm hydrograph shall be computed using a calculation method that produces a full hydrograph. Haverford Township may approve the use of any generally accepted full hydrograph approximation technique that shall use a total runoff volume that is consistent with the volume from a method that produces a full hydrograph.

§ 78-41. Other requirements.

- A. Any stormwater facility located on state highway rights-of-way shall be subject to approval by PennDOT.
- B. All wet basin designs shall incorporate biologic controls consistent with the West Nile Guidance found in Appendix H, PADEP document 363-0300-001 "Design Criteria – Wetlands Replacement/Monitoring," or contact the Pennsylvania State Cooperative Wetland Center (www.wetlands.psu.edu/) or the Penn State Cooperative Extension Office (www.extension.psu.edu/extmap.html).
- C. Any stormwater management facility (i.e., detention basin) required or regulated by this article designed to store runoff and requiring a berm or earthen embankment shall be designed to provide an emergency spillway to handle flow up to and including the one-hundred-year proposed conditions. The height of embankment must provide a minimum 1.0 foot of freeboard above the maximum pool elevation computed when the facility functions for the one-hundred-year proposed conditions inflow. Should any stormwater management facility require a dam safety permit under DEP Chapter 105, the facility shall be designed in accordance with Chapter 105 and meet the regulations of Chapter 105 concerning dam safety. Chapter 105 may be required to pass storms larger than the

one-hundred-year event.

- D. Any facilities that constitute water obstructions (e.g., culverts, bridges, outfalls, or stream enclosures) and any work involving wetlands governed by DEP Chapter 105 regulations (as amended or replaced from time to time by DEP) shall be designed in accordance with Chapter 105 and will require a permit from DEP.
- E. Any other drainage conveyance facility that does not fall under Chapter 105 regulations must be able to convey, without damage to the drainage structure or roadway, runoff from the twenty-five-year design storm with a minimum 1.0 foot of freeboard measured below the lowest point along the top of the roadway. Any facility that constitutes a dam as defined in DEP Chapter 105 regulations may require a permit under dam safety regulations. Any facility located within a PennDOT right-of-way must meet PennDOT minimum design standards and permit submission requirements. The larger events (50 year and 100 year) must also be safely conveyed in the direction of natural flow without creating additional damage to any drainage structures, nearby structures, or roadways.
- F. Any drainage conveyance facility and/or channel not governed by Chapter 105 regulations must be able to convey, without damage to the drainage structure or roadway, runoff from the twenty-five-year design storm. Conveyance facilities to or exiting from stormwater management facilities (i.e., detention basins) shall be designed to convey the design flow to or from that structure. Roadway crossings located within designated floodplain areas must be able to convey runoff from a one-hundred-year design storm. Any facility located within a PennDOT right-of-way must meet PennDOT minimum design standards and permit submission requirements.
- G. Conveyance facilities transporting flow to or exiting from stormwater management facilities (i.e. detention basins) shall be designed to convey the 100-year frequency storm.
- H. Roadway crossings or structures located within designated floodplain areas must be able to convey runoff from a 100-year design storm consistent with FEMA Floodplain Management requirements.
- I. Adequate erosion protection shall be provided along all open channels and at all points of discharge.
- J. The design of all stormwater management facilities shall incorporate sound engineering principles and practices. Haverford Township reserves the right to disapprove any design that would result in construction in or continuation of a stormwater problem area.

§78-42. Riparian Buffers

- A. Except as required by Chapter 102, if a perennial or intermittent stream passes through, or a waterbody (i.e., lake, pond, wetland) is present on the site, the Applicant shall create a Riparian Buffer extending a minimum of 100 feet, to either side of the top-of-bank of the channel, lake, or wetland

- B. The Riparian Buffer shall be planted with native vegetation and maintained in a vegetated state (Refer to Appendix B, Pennsylvania Native Plant List, contained in the PA BMP Manual or latest guidance document from PADEP).
1. The following provisions also apply to Riparian Buffers on lots in existence at the time of adoption of this Ordinance:
 - a. If the applicable rear or side yard setback is less than 50 feet, the buffer width may be reduced to twenty-five (25) percent of the setback or twenty-five (25) feet, whichever is greater.
 - b. If a stream traverses a site in a manner that significantly reduces the use of the site, the buffer may be either:
 - i. Reduced to twenty-five (25) feet on either side, with municipal approval, or
 - ii. Reduced to ten (10) feet with municipal waiver
 2. Permitted uses within the Riparian Buffer include the following, subject to municipal approval and provided that they comply with all federal, state, and local regulations:
 - a. Recreational trails. See Ordinance Appendix J Riparian Buffer Trail Guidelines.
 - b. Utility rights-of-way
 - c. Bridges
 - d. Other uses subject to Township approval.
 3. If an existing buffer is legally prescribed (i.e., deed, covenant, easement, etc.) and it exceeds the requirements of this Ordinance, the existing buffer shall be maintained.

§ 78-43. Inspections.

- A. The Municipal Engineer or his municipal designee shall inspect all phases of the installation of the permanent BMPs and/or stormwater management facilities as deemed appropriate by the municipal Engineer.
- B. During any stage of the work, if the municipal Engineer or his municipal designee determines that the permanent BMPs and/or stormwater management facilities are not being installed in accordance with the approved stormwater management plan, the municipality shall revoke any existing permits or other approvals and issue a cease and desist order until a revised SWM site plan is submitted and approved, as specified in this article, and until the deficiencies are corrected.
- C. A final inspection of all BMPs and/or stormwater management facilities shall be conducted by the municipal Engineer or his municipal designee to confirm compliance with the approved SWM site plan prior to the issuance of any occupancy permit.

§78-44. As-Built Plans, Completion Certificate, and Final Inspection

- A. The developer shall be responsible for providing as-built plans of all SWM BMPs included in the approved SWM site plan for activities involving regulated impervious surfaces 500 sq. ft. or greater and for earth disturbances 5,000 sq. ft. or greater. The as-built plans and all explanation of any discrepancies with the construction plans shall be submitted to the Municipality within three (3) months of the completion of construction of the SWM BMPs.
- B. As-built plans shall show the location (including latitude and longitude coordinates) and as-built conditions of all SWM BMPs and include the following information: impervious surfaces included in the approved SWM site plan; topographic contours; and existing, proposed, and built impervious surfaces shown in the as-built drawings.
- C. The as-built submission shall include a certification of completion signed by a Design Professional verifying that all permanent SWM BMPs have been constructed according to the approved plans and specifications.
- D. The municipality will review the as-built submission for consistency with the approved SWM site plan as well as actual conditions at the project site. After receipt of the completion certification by the Municipality, the Municipality may conduct a final inspection.
- E. If an NPDES Permit for Stormwater Discharges Associated with Construction Activities was required for the Regulated Activity, a Notice of Termination (NOT) approval must be obtained upon completion of construction prior to final approval of the project by the Municipality.

§ 78-45. Municipality SWM site plan review and inspection fee.

Fees shall be established by Haverford Township to defray plan review and construction inspection costs incurred by the municipality. All fees shall be paid by the applicant at the time of SWM site plan submission. A review and inspection fee schedule shall be established by resolution of the Board of Commissioners based on the size of the regulated activity and based on the municipality's costs for reviewing SWM site plans and conducting inspections pursuant to § 78-43 Haverford Township shall periodically update the review and inspection fee schedule to ensure that review costs are adequately reimbursed.

§ 78-46 Expenses covered by fees.

- A. The fees required by this article shall at a minimum cover:
 - a. Administrative costs.
 - b. The review of the SWM site plan by Haverford Township and the Township Engineer.
 - c. The inspection of stormwater management facilities and drainage improvements during construction.

- d. The site inspections.
- e. The inspection of stormwater management facilities and drainage improvements during construction.
- f. Attendance at meetings.
- g. The final inspection upon completion of the stormwater management facilities and drainage improvements presented in the SWM site plan
- h. Any additional work required to enforce any permit provisions regulated by this article, correct violations, and assure proper completion of stipulated remedial actions.
- i. In addition, any and all costs for the review of plans and the inspection of stormwater management facilities and drainage improvements during construction by the municipal engineer, shall be deducted from the applicant's escrow account.

§ 78-47. Performance guarantee.

A. For SWM Site Plans that involve subdivision and land development, the applicant shall provide a financial guarantee to the Municipality for the timely installation and proper construction of all stormwater management controls as

(1) required by the approved SWM site plan equal to or greater than the full construction cost of the required controls; or

(2) The amount and method of payment provided for in the SALDO.

B. For other regulated activities, Haverford Township may require a financial guarantee from the applicant.

§ 78-48 Responsibilities for operations and maintenance (O&M) of stormwater controls and BMPs.

A. No regulated earth disturbance activities within Haverford Township shall commence until approval by the municipality of a stormwater control and BMP operations and maintenance plan that describes how the permanent (e.g., postconstruction) stormwater controls and BMPs will be properly operated and maintained.

B. The Township shall make the final determination on the continuing maintenance responsibilities prior to final approval of the SWM Site Plan. The municipality may require a dedication of such facilities as part of the requirements for approval of the SWM Site Plan. Such a requirement is not an indication that the municipality will accept the facilities. The Township reserves the right to accept or reject the ownership and operating responsibility for any portion of the stormwater management controls.

C. Facilities, areas, or structures used as SWM BMPs shall be enumerated as permanent real estate appurtenances and recorded as deed restrictions or conservation easements that run with the land.

A. The O&M Plan shall be recorded as a restrictive deed covenant that runs with the land.

B. The Municipality may take enforcement actions against an owner for any failure to satisfy the provisions of this Article.

D. The following items shall be included in the stormwater control and BMP operations and maintenance plan:

(1) Map(s) of the project area, in a form that meets the requirements for recording at the offices of the Recorder of Deeds of Delaware County. The contents of the maps(s) shall include, but not be limited to:

- (a) Clear identification of the location and nature of permanent stormwater controls and BMPs;
- (b) The location of the project site relative to highways, municipal boundaries, or other identifiable landmarks;
- (c) Existing and final contours at intervals of two feet, or others as appropriate;
- (d) Existing streams, lakes, ponds, or other bodies of water within the project site area;
- (e) Other physical features, including flood hazard boundaries, sinkholes, streams, existing drainage courses, and areas of natural vegetation to be preserved;
- (f) The locations of all existing and proposed utilities, sanitary sewers, and waterlines within 50 feet of property lines of the project site;
- (g) Proposed final changes to the land surface and vegetative cover, including the type and amount of impervious area that would be added;
- (h) Proposed final structures, roads, paved areas, and buildings; and
- (i) A fifteen-foot-wide access easement around all stormwater controls and BMPs that would provide ingress to and egress from a public right-of-way.

(2) A description of how each permanent stormwater control and BMP will be operated and maintained, and the identity and contact information associated with the person(s) responsible for operations and maintenance.

(3) The name of the project site, the name and address of the owner of the property, and the name of the individual or firm preparing the plan.

(4) A statement, signed by the landowner, acknowledging that the stormwater controls and BMPs are fixtures that can be altered or removed only after approval by

Haverford Township.

C. The stormwater control and BMP operations and maintenance plan for the project site shall establish responsibilities for the continuing operation and maintenance of all permanent stormwater controls and BMPs, as follows:

(1) If a plan includes structures or lots which are to be separately owned and in which streets, sewers, and other public improvements are to be dedicated to Haverford Township, stormwater controls and BMPs may also be dedicated to and maintained by the municipality;

(2) If a plan includes operations and maintenance by a single ownership or if sewers and other public improvements are to be privately owned and maintained, then the operation and maintenance of stormwater controls and BMPs shall be the responsibility of the owner or private management entity.

§ 78-49. Municipal review of a stormwater control and BMP operations and maintenance plan.

A. The municipality shall review the stormwater control and BMP operations and maintenance plan for consistency with the purposes and requirements of this article and any permits issued by DEP.

B. The municipality shall notify the applicant in writing whether or not the stormwater control and BMP operations and maintenance plan is approved.

C. The municipality will require an as-built plan showing all constructed stormwater controls and BMPs and an explanation of any discrepancies with the approved operations and maintenance plan.

§ 78-50. Adherence to an approved stormwater control and BMP operations and maintenance plan.

It shall be unlawful to alter or remove any permanent stormwater control and BMP required by an approved stormwater control and BMP operations and maintenance plan or to allow the property to remain in a condition which does not conform to an approved stormwater control and BMP operations and maintenance plan.

§ 78-51. Operation and Maintenance Agreements for privately owned stormwater controls and BMPs.

A. Prior to final approval of the SWM Site Plan, the property owner shall sign and record an Operation and Maintenance (O&M) Agreement as drafted by the Township (in a similar form as Appendix I, but as may be amended by the Township) covering all stormwater control facilities which are to be privately owned. The maintenance agreement shall be transferred with transfer of ownership in perpetuity.

a. The owner, successor and assigns shall maintain all facilities in accordance with the approved maintenance schedule in the O&M Agreement.

- b. The owner shall convey to the Township conservation easements to assure access for periodic inspections by the Township and maintenance, as necessary.
 - c. The owner shall keep on file with the Township the name, address, and telephone number of the person or company responsible for maintenance activities; in the event of a change, new information shall be submitted by the owner to the Municipality within ten (10) working days of the change.
- B. The owner is responsible for operation and maintenance (O&M) of the SWM BMPs. If the owner fails to adhere to the O&M Agreement, the Township may perform the services required and charge the owner appropriate fees. Nonpayment of fees may result in a lien against the property.
- C. Other items may be included in the agreement where determined necessary to guarantee the satisfactory operation and maintenance of all permanent stormwater controls and BMPs. The agreement shall be subject to the review and approval of the Township.

§ 78-52. Stormwater management easements.

- A. Stormwater management easements are required for all areas used for off-site stormwater control, unless a waiver is granted by the Township.
- B. Stormwater management easements shall be provided by the applicant or property owner if necessary for access for inspections and maintenance or the preservation of stormwater runoff conveyance, infiltration, and detention areas and other stormwater controls and BMPs by persons other than the property owner. The purpose of the easement shall be specified in any agreement under § 78-51.

§ 78-53. Maintenance agreement for privately owned stormwater facilities.

- A. Prior to final approval of the site's SWM site plan, the applicant shall sign and record the Operation and Maintenance (O&M) Agreement as drafted by the Township, covering all stormwater control facilities that are to be privately owned.
- B. Other items may be included in the agreement where determined necessary to guarantee the satisfactory maintenance of all facilities. The Operation and Maintenance (O&M) Agreement shall be subject to the review and approval of the Municipal Solicitor and Board of Commissioners.

§ 78-54. Recording of an approved stormwater control and BMP operations and maintenance plan and related agreements.

- A. The owner of any land upon which permanent stormwater controls and BMPs will be placed, constructed, or implemented, as described in the stormwater control and BMP operations and maintenance plan, shall record the following documents in the Office of the Recorder of Deeds for Delaware County within 15 days of approval of the stormwater control and BMP operations and maintenance plan by the municipality:

- (1) The operations and maintenance plan, or a summary thereof,
 - (2) Operations and Maintenance Agreement for Privately Owned Stormwater Controls and BMPs under § 78-51; and
 - (3) Stormwater Management Easements under § 78-52.
- B. The municipality may suspend or revoke any approvals granted for the project site upon discovery of failure on the part of the owner to comply with this section.

§ 78-55. Municipal Stormwater Control and BMP Operation and Maintenance Fund.

A. The Township shall inspect SWM BMPs, facilities, and/or structures installed under this Ordinance according to the following frequencies, at a minimum, to ensure the BMPs, facilities and/or structures continue to function as intended. Persons installing stormwater controls or BMPs shall be required to pay a specified amount to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to help defray costs of periodic inspections and maintenance expenses. The amount of the deposit shall be determined as follows:

- (1) If the stormwater control or BMP is to be privately owned and maintained, the deposit shall cover the cost of periodic inspections performed by Haverford Township for a period of 10 years, as estimated by the municipal Engineer. After that period of time, inspections will be performed at the expense of the municipality. The following minimum inspection frequencies are required:
 - 1) Annually for the first 5 years.
 - 2) Once every 3 years thereafter
 - 3) During or immediately after the cessation of a 25-year or greater storm, as determined by the Municipal Engineer.
 - 4) The Township Engineer may request that the landowners or landowner's designee submit an inspection report after the cessation of a 10-year or greater storm event if there is reason to believe that a BMP has sustained damage that impacts its ability to function as designed and if the BMP's failure would result in damage to downgradient properties.
- (2) If the stormwater control or BMP is to be owned and maintained by Haverford Township, the deposit shall cover the estimated costs for maintenance and inspections for 10 years. The municipal Engineer will establish the estimated costs utilizing information submitted by the applicant. The following minimum inspection frequencies are required:
 - 1) Annually for the first 5 years.
 - 2) Once every 3 years thereafter
 - 3) During or immediately after the cessation of a 25-year or greater storm, as

determined by the Municipal Engineer.

- (3) The above referenced inspections shall be conducted during or immediately following precipitation events or in dry weather conditions if the BMP design parameters include dewatering with a specified period of time. A written inspection report shall be created to document each inspection. The inspection report shall contain the date and time of the inspection, the individual(s) who completed the inspection, the location of the BMP, Stormwater Management Facility or structure inspected, observations on performance, and recommendations for improving performance, if applicable.
 - (4) The amount of the deposit to the fund shall be converted to present worth of the annual series values. The municipal Engineer shall determine the present worth equivalents, which shall be subject to the approval of the governing body.
- B. If a stormwater control or BMP is proposed that also serves as a recreational facility (e.g., ball field or lake), Haverford Township may reduce or waive the amount of the maintenance fund deposit based upon the value of the land for public recreational purpose.
- C. If at some future time a stormwater control or BMP (whether publicly or privately owned) is eliminated due to the installation of storm sewers or other storage facility, the unused portion of the maintenance fund deposit will be applied to the cost of abandoning the facility and connecting to the storm sewer system or other facility. Any amount of the deposit remaining after the costs of abandonment are paid will be returned to the depositor.
- D. If stormwater controls or BMPs are accepted by Haverford Township for dedication, the municipality may require persons installing stormwater controls or BMPs to pay a specified amount to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to help defray costs of operations and maintenance activities. The amount may be determined as follows:
- (1) The amount shall cover the estimated costs for operations and maintenance for 10 years, as determined by Haverford Township.
 - (2) The amount shall then be converted to present worth of the annual series values.
- E. If a stormwater control or BMP is proposed that also serves as a recreational facility (e.g., ball field or lake), Haverford Township may adjust the amount due accordingly.
- F. Haverford Township shall require applicants to pay a fee to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to cover long-term maintenance of stormwater controls and BMPs.
- G. Haverford Township may require applicants to pay a fee to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to cover inspections, long term maintenance of stormwater BMPs and conveyances, and stormwater related problems

which may arise from the land development and earth disturbance.

§ 78-56. Prohibited Discharges and Connections.

- A. Any drain or conveyance, whether on the surface or subsurface, that allows any non-stormwater discharge including sewage, process wastewater, and wash water to enter the Township's separate storm sewer system, riparian buffers, wetlands, or other waters of this Commonwealth, and any connections to the storm drain system from indoor drains and sinks, is prohibited.
- B. No person in Haverford Township shall allow, or cause to allow, stormwater discharges into a regulated small MS4, or discharges into waters of this Commonwealth, which are not composed entirely of stormwater, except as provided in subsection C below, and discharges authorized under a state or federal permit.
- C. The following discharges are authorized unless they are determined to be significant contributors to pollution to a regulated small MS4 or to the waters of this Commonwealth:
 - a. Discharges from firefighting activities.
 - b. Discharges from potable water sources including water line flushing and fire hydrant flushing, if such discharges do not contain detectable concentrations of Total Residual Chlorine (TRC).
 - c. Non-contaminated irrigation drainage water.
 - d. Routine external building washdown (which does not use detergents or other compounds).
 - e. Non-contaminated HVAC condensation and water from geothermal systems.
 - f. Residential (i.e., not commercial) vehicle wash water where cleaning agents are not utilized.
 - g. Springs and water from crawl space pumps.
 - h. Uncontaminated water from foundation or from footing drains.
 - i. Flows from riparian habitats and wetlands.
 - j. Lawn watering.
 - k. Pavement washwaters where spills or leaks of toxic or hazardous materials have not occurred (unless all spill material has been removed) and where detergents are not used.
 - l. Uncontaminated groundwater
 - m. Non-contaminated hydrostatic test water discharges if such discharges do not contain detectable concentrations of TRC.

- n. Diverted stream flows.
- D. In the event that the municipality determines that any of the discharges identified in Subsection C significantly contribute pollutants to a regulated small MS4 or to the waters of this Commonwealth, or is so notified by DEP, the Township will notify the responsible person(s) to cease the discharge.
- E. Upon notice provided by the Township under §78-56.D the discharger will have a reasonable time, as determined by the Township, to cease the discharge consistent with the degree of pollution caused by the discharge.
- F. Nothing in this section shall affect a discharger's responsibilities under state law.

§ 78-57. Roof Drains and Sump Pumps.

- A. Roof drains and sump pumps shall not be connected to sanitary sewers.
- B. Roof drains and sump pumps shall not be connected to streets, storm sewers, or roadside ditches except on a case by case basis as determined by the Township.
- C. Roof drains and sump pumps shall discharge to infiltration areas or vegetative BMPs to the maximum extent practicable where advantageous to do so.

§ 78-58. Prohibited connections.

The following connections are prohibited, except as provided in § 78-56.C above:

- A. Any drain or conveyance, whether on the surface or subsurface, which allows any non-stormwater discharge including sewage, process wastewater, and wash water, to enter the separate storm sewer system, and any connections to the storm drain system from indoor drains and sinks.
- B. Any drain or conveyance connected from a commercial or industrial land use to the separate storm sewer system which has not been documented in plans, maps, or equivalent records and approved by Haverford Township.
- C. Any drain or conveyance that delivers non-stormwater discharges directly into wetlands, riparian buffers, or other waters of the Commonwealth is prohibited.

§ 78-59. Alteration of SWM BMPs

- A. No person shall modify, remove, fill, landscape, or alter any existing stormwater control or BMP unless it is part of an approved maintenance program without the written approval of Haverford Township.
- B. No person shall place any structure, fill, landscaping, or vegetation into a stormwater control or BMP or within a drainage easement which would limit or alter the functioning

of the stormwater control or BMP without the written approval of Haverford Township.

§ 78-60. Right-of-entry.

- A. Upon presentation of proper credentials, the Township or its designated agent may enter at reasonable times upon any property within the municipality to inspect the condition, implementation, or operation and maintenance of all erosion and sediment controls and permanent stormwater BMPs, conveyances, or other stormwater management facilities both during and after the completion of the regulated activity, or for compliance with any requirement of the stormwater structures and facilities in regard to any aspect regulated by this Ordinance.
- B. Stormwater control and BMP owners and operators shall allow persons working on behalf of Haverford Township ready access to all parts of the premises for the purposes of determining compliance with this article.
- C. Persons working on behalf of Haverford Township shall have the right to temporarily locate on any stormwater control or BMP in the municipality such devices as are necessary to conduct monitoring and/or sampling of the discharges from such stormwater control or BMP.
- D. Unreasonable delays in allowing the municipality access to a stormwater control or BMP is a violation of this article.
- E. If the property owner or representative does not grant access to the Municipality within 24 hours of the notification, it will be a violation of this Ordinance.

§ 78-61. Public nuisance.

- A. The violation of any provision of this article is hereby deemed a public nuisance.
- B. Each day that a violation continues shall constitute a separate violation.

§ 78-62. Enforcement generally.

- A. Whenever Haverford Township finds that a person has violated a prohibition or failed to meet a requirement of this article, the municipality may order compliance by written notice to the responsible person. Such notice may, without limitation, require the following remedies:
 - a. Performance of monitoring, analyses, and reporting;
 - b. Elimination of prohibited connections or discharges;
 - c. Cessation of any violating discharges, practices, or operations;
 - d. Abatement or remediation of stormwater pollution or contamination hazards and the restoration of any affected property;
 - e. Payment of a fine to cover administrative and remediation costs;

f.Implementation of stormwater controls and BMPs; and

g. Operation and maintenance of stormwater controls and BMPs.

B. Such notification shall set forth the nature of the violation(s) and establish a time limit for correction of these violations(s). Said notice may further advise that, if applicable, should the violator fail to take the required action within the established deadline, the work will be done by Haverford Township or designee, and the expense thereof shall be charged to the violator.

C. Failure to comply within the time specified shall also subject such person to the penalty provisions of this article. All such penalties shall be deemed cumulative and shall not prevent the municipality from pursuing any and all other remedies available in law or equity.

§ 78-63. Suspension and revocation of permits and approvals.

A. Any building, land development, or other permit or approval issued by the Township pursuant to this Ordinance may be suspended or revoked for:

a. Non-compliance with or failure to implement any provision of the permit.

b. A violation of any provision of this Ordinance or any other applicable law, ordinance, rule, or regulation relating to the regulated activity.

c. The creation of any condition or the commission of any act during construction or development which constitutes or creates a hazard, nuisance, pollution, or endangers the life or property of others.

B. A suspended permit or approval may be reinstated by the Municipality when:

a. The Township engineer or designee has inspected and approved the corrections to the stormwater controls and BMPs or the elimination of the hazard or nuisance.

b. The Township is satisfied that the violation or the article, law, or rule and regulations has been corrected.

C. A permit or approval that has been revoked by the Township cannot be reinstated. The applicant may apply for a new approval under the provisions of this Ordinance.

D. Prior to revocation or suspension of a permit and at the request of the applicant, the governing body shall schedule a hearing to discuss the noncompliance if there is no immediate danger to life, public health, or property. The expense of a hearing shall be the applicant's responsibility.

§ 78-64. Violations and penalties.

- A. Any person violating the provisions of this article shall be guilty of a misdemeanor and upon conviction shall be subject to a fine of not more than \$1,000 for each violation, recoverable with costs, or imprisonment of not more than 90 days, or both. Each day that the violation continues shall be a separate offense.
- B. In addition, the Township, through its Solicitor, may institute injunctive, mandamus, or any other appropriate action or proceeding at law or in equity for the enforcement of this article. Any court of competent jurisdiction shall have the right to issue restraining orders, temporary or permanent injunctions, mandamus, or other appropriate forms of remedy or relief.

§ 78-65. Notification

In the event that a person fails to comply with the requirements of this article or fails to conform to the requirements of any permit issued hereunder, the Township shall provide written notification of the violation. Such notification shall state the nature of the violation(s) and establish a time limit for correction of these violation(s). Failure to comply within the time specified shall subject such person to the penalty provisions of this article. All such penalties shall be deemed cumulative and shall not prevent the Township from pursuing any and all remedies. It shall be the responsibility of the owner of the real property on which any regulated activity is proposed to occur, is occurring, or has occurred to comply with the terms and conditions of this article.

§78- 66. Enforcement

The Board of Commissioners is hereby authorized and directed to enforce all of the provisions of this article. All inspections regarding compliance with the SWM site plan shall be the responsibility of the Township Engineer or other qualified persons designated by the Board of Commissioners.

- A. A set of design plans approved by the Township shall be on file at the site throughout the duration of the construction activity. Periodic inspections may be made by the Township or designee during construction.
- B. It shall be unlawful for any person, firm, or corporation to undertake any regulated activity under § 78-17 on any property except as provided for in the approved SWM site plan and pursuant to the requirements of this article. It shall be unlawful to alter or remove any control structure required by the SWM site plan pursuant to this article or to allow the property to remain in a condition which does not conform to the approved SWM site plan.
- C. At the completion of the project and as a prerequisite for the release of the performance guarantee, the owner or his representatives shall:
 - (1) Provide a certification of completion from an engineer, architect, surveyor or other qualified person verifying that all permanent facilities have been constructed

according to the plans and specifications and approved revisions thereto.

(2) Provide a set of as-built (record) drawings.

D. After receipt of the certification by Haverford Township, a final inspection shall be conducted by the municipal Engineer or designated representative to certify compliance with this article.

E. Occupancy permit. An occupancy permit shall not be issued unless the certification of completion pursuant to § 78-66.C(1) has been secured. The occupancy permit shall be required for each lot owner and/or applicant for all subdivisions and land developments in Haverford Township.

§ 78-67. Appeals.

A. Any person aggrieved by any action of the Township or its designee may appeal to the Board of Commissioners of Haverford Township within 30 days of that action.

B. Any person aggrieved by any decision of the Board of Commissioners of Haverford Township may appeal to the County Court of Common Pleas in the County where the activity has taken place within 30 days of the municipal decision.

Section II. Attachments to Chapter 78. The following attachments, consolidated herein and attached to this Ordinance as **Exhibit “A”**, shall serve as the attachments/appendices to Chapter 78, as so referenced above.

Attachment 1 - Table 105.1 Applicability

Attachment 2 - Appendix A Watershed Map

Attachment 3 - Appendix B

Attachment 4 - Appendix C-1 SWM Site Plan Application

Attachment 5 - Appendix C-2 SWM Site Plan Checklist

Attachment 6 - Appendix D Review Procedure Flowchart, Darby-Cobbs Creeks Watershed
Stormwater Mgmt

Attachment 7 - Appendix E LID Practices

Attachment 8 - Appendix F Design Criteria

Attachment 9 - Appendix I Operations and Management Agreement

Attachment 10 - Appendix J Riparian Buffer Trail Guidelines

Section III. Redlined Ordinance for Reference. For ease of reference, the majority of deletions, additions and changes to Chapter 78, and a summary of the changes to the Attachments, are attached hereto as **Exhibit “B”**.

Section IV: Repealer. All Ordinances or parts of Ordinances inconsistent herewith or in conflict with any of the specific terms enacted hereby, to the extent of said inconsistencies or conflicts, are hereby specifically repealed.

Section V: Revisions. The Haverford Township Board of Commissioners does hereby reserve the right, from time to time, to adopt modifications of, supplements to, or amendments of this Ordinance.

Section VI: Severability. If any section, sentence, clause, phrase or word of this Ordinance shall be declared illegal, invalid or unconstitutional by any Court of competent jurisdiction, such declaration shall not prevent, preclude or otherwise foreclose enforcement of any of the remaining portions of this Ordinance.

Section VII: Effective Date. This amendment shall become effective upon the legal date of its adoption.

Section VIII: Failure To Enforce Not A Waiver. The failure of Haverford Township to enforce any provision of this Ordinance shall not constitute a waiver by the Township of its rights of future enforcement hereunder

Enacted and Adopted this _____ day of _____, 2024.

Section	Type of Project	Regulated Impervious Surface				Earth Disturbance	
		0-499 square feet	500-1,999 square feet	2,000 square feet to 1 acre	Greater than 1 acre	5,000 square feet to 1 acre	Greater than 1 acre
Erosion and Sediment Pollution Control Plan Submission to the Conservation District	Earth Disturbance	See "earth disturbance requirements"	See "earth disturbance requirements"	See "earth disturbance requirements"	See "earth disturbance requirements"	Yes	Yes
		(Refer to municipal earth disturbance requirements, as applicable)					

Legend:

Yes - SWM Site Plan required with associated section provision.

N/A - Not applicable – exempt from SWM Site Plan submission.

Exempt - Exempt from required section provision; SWM Site Plan submission may still be required if other section provisions are applicable (yes in box).

Modified - Modified SWM Site Plan required.

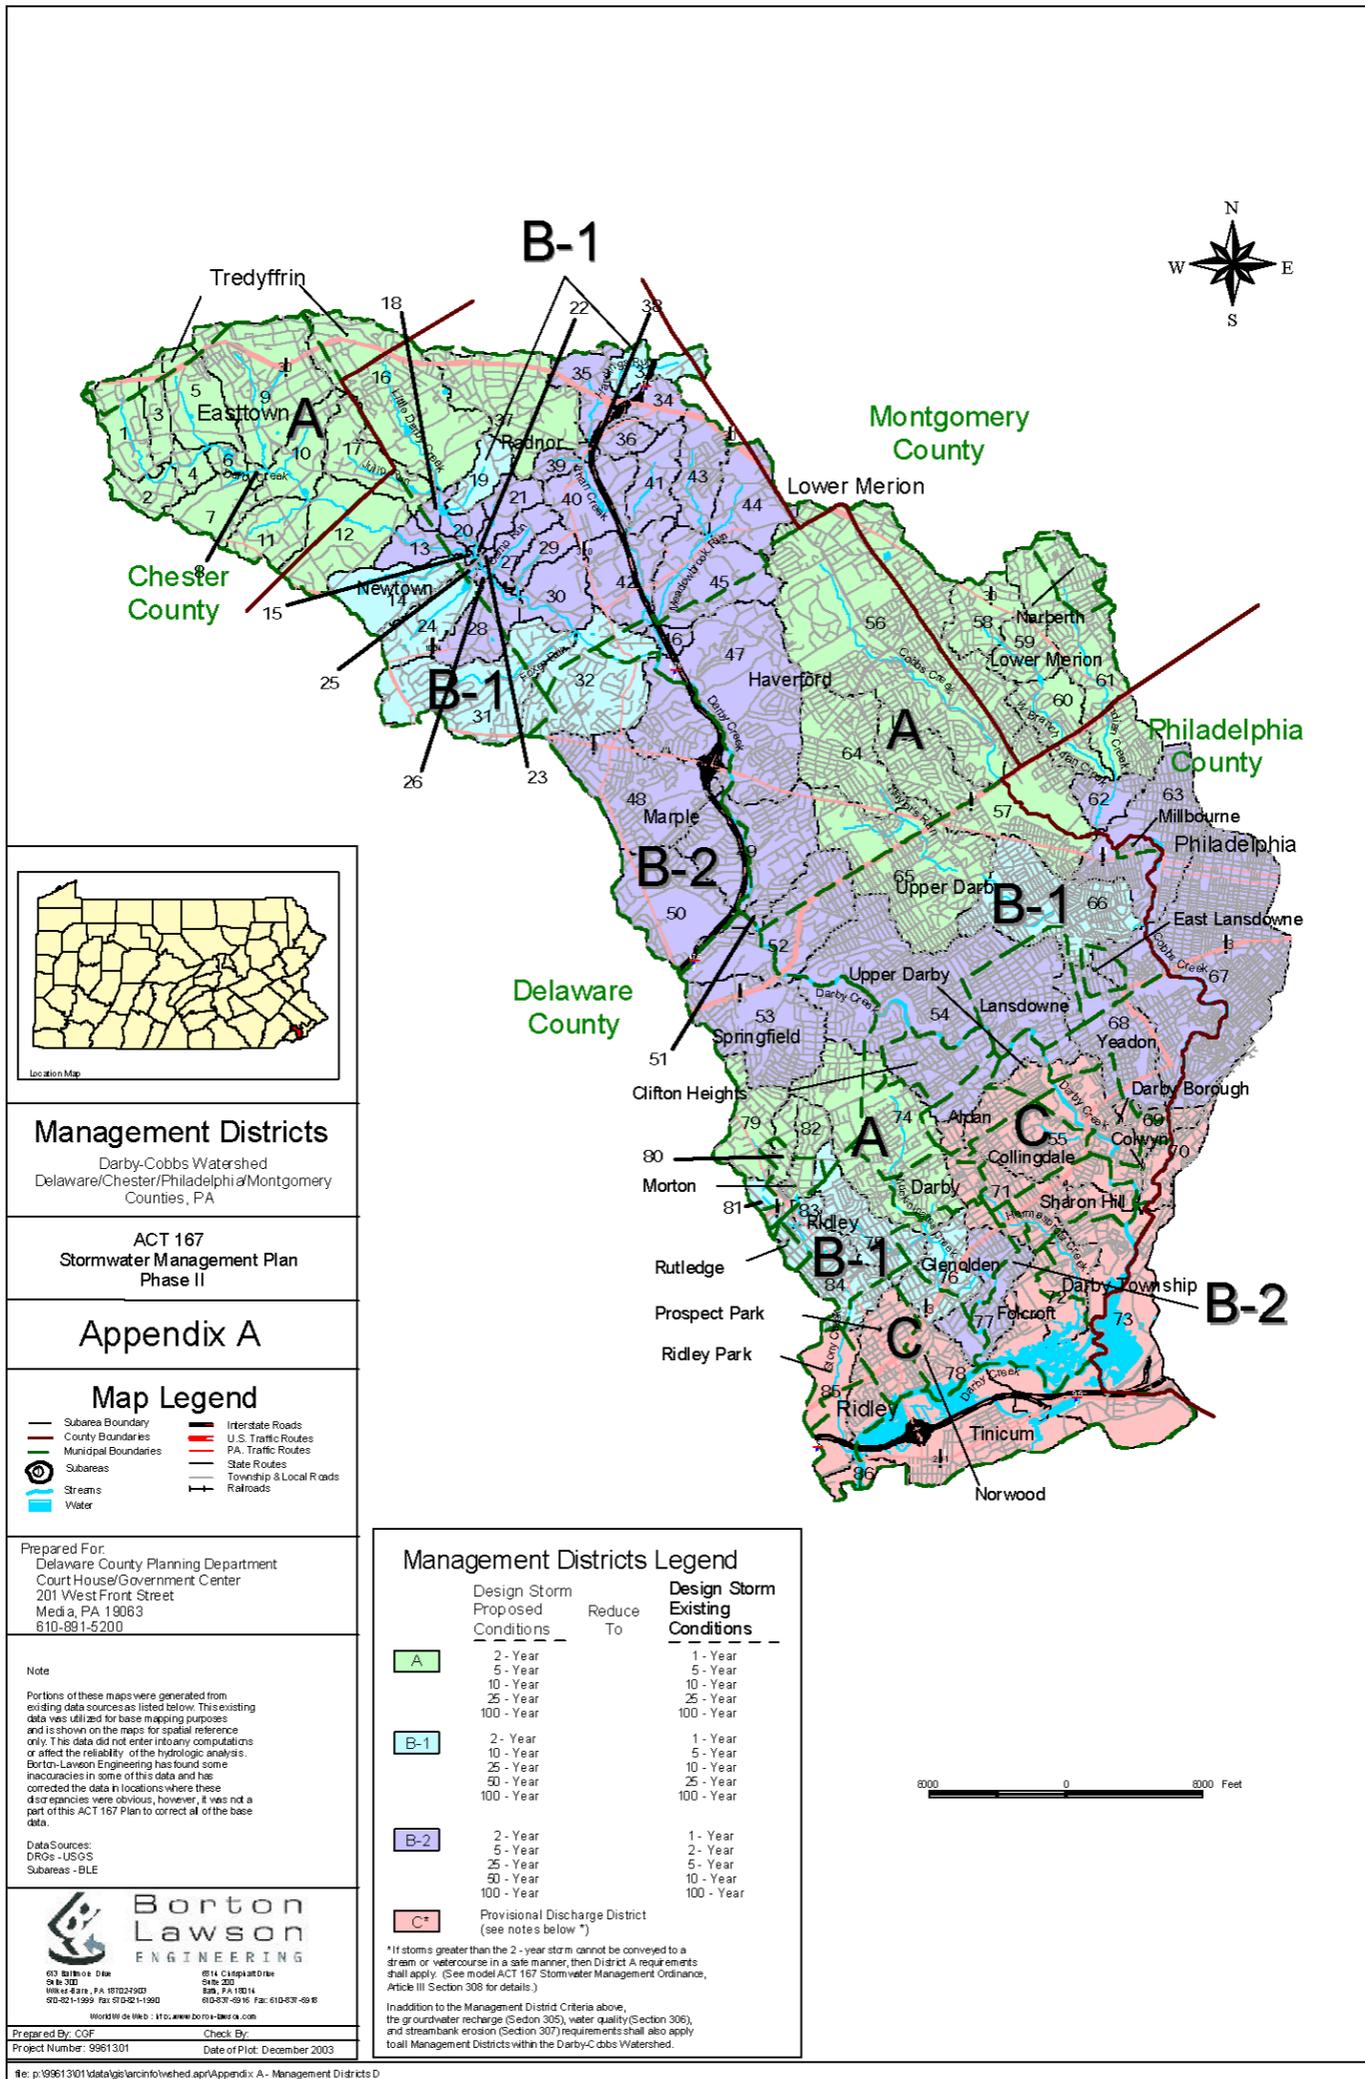

Notes:

- Sites with less than 499 square feet of regulated impervious surface, but between 5,000 square feet and one acre of earth disturbance must submit a modified SWM Site Plan to Haverford Township which need only consist of the items in § 78-25A(2) and (4); B(7), (8), (11) and (22); and D(1) and (3) and related supportive material needed to determine compliance with §§ 78-33 and 78-37.
- Sites with more than 499 square feet, but less than 2,000 square feet of regulated impervious surface must submit a SWM Site Plan; however, it need not consist of the items in §§ 78-36 and 78-37. See Appendix B.

DARBY-COBBS STORMWATER MANAGEMENT DISTRICT WATERSHED MAP

ORDINANCE APPENDIX B

Simplified Approach to Stormwater Management for Small Projects

Applicability: Stormwater management procedures for projects with between five hundred (500) square feet and 1,999 square feet of regulated impervious area.

SIMPLIFIED APPROACH TO STORMWATER MANAGEMENT FOR SMALL PROJECTS

Introduction

The following procedures have been developed to allow homeowners to comply with stormwater management criteria for new projects to meet the requirements of the Act 167 Stormwater Management Ordinance of the Municipality including sizing, designing, locating, and installing on-lot measures, referred to herein as “Best Management Practices” (BMPs). Pennsylvania Act 167 was authorized on October 4, 1978 (32 P.S., P.L. 864) and gave Pennsylvania municipalities the power to regulate activities that affect stormwater runoff and surface and groundwater quantity and quality.

Individual home construction projects on single-family lots which result in between 500 square feet and 1,999 square feet of impervious area (including the building footprint, driveway, sidewalks, and parking areas) are not required to submit formal SWM site plans to the Municipality or County; however, they are still required to address water quality and infiltration goals as outlined in this Simplified Approach document. If the guidelines presented in this brochure are followed, the individual homeowner will not require professional services to comply with these water quality and infiltration goals.

Section B.1 describes requirements and a simplified method for designing a suitable BMP, and a description of what needs to be included on the simple sketch plan. Section B.2 presents definitions of key terms. Section B.3 presents options of BMPs that can be considered for on-lot stormwater management. An example of how to obtain the size and dimensions of a BMP is explained in Section B.4. Section B.5 describes the requirements to be met for the modified Operation, Maintenance, and Inspection Plan.

The Simplified Approach requires:

- The first 1” of rainfall runoff from new impervious surfaces to be captured (see definition in Section B.2).

The purpose of this is to help reduce stormwater runoff in the community, to maintain groundwater recharge, to prevent degradation of surface and groundwater quality, and to otherwise protect water resources and public safety.

What needs to be sent to the Municipality?

Even though a formal SWM site plan is not required for individual lot owners, the Simplified Method worksheet found in Table B-4 and a simple sketch plan containing the features described in Step 5 of Section B.1 needs to be submitted to the Municipality, and if applicable, the contractor prior to construction. The Operation and Maintenance Agreement found in Section B.5 needs to be signed and submitted with the simple sketch plan to the Municipality for approval.

B.1 Determination of Simplified Approach Volume Requirements

All proposed impervious areas must be included in the determination of the amount of new impervious areas and the size of proposed BMPs needed to control stormwater. Proposed impervious areas on an individual residential lot include: roof area, pavement, sidewalks, driveways, patios, porches, permanent pools, or parking areas. Sidewalks or patios that are constructed with gravel or pervious pavers that will not be converted to an impervious surface in the future need not be included in this calculation. Surfaces that were designed to allow infiltration (i.e. pavers and areas of porous pavement) are to be considered impervious surface, however, may be designed to function as a BMP per review by the Township Engineer. Therefore, the amount of proposed impervious area can be reduced for proposed driveways, patios, and sidewalks through the use of gravel, pervious pavement, and turf pavers. All regulated impervious areas must be constructed so that runoff is conveyed to a BMP; no runoff can be directed to storm sewers, inlets, or other impervious areas (i.e., street).

In addition, the use of low impact development is recommended to further minimize the effect of the new construction on water, land, and air. Low impact development is a method of development that incorporates design techniques that include: minimizing the amount of land disturbance, reducing impervious cover, disconnecting gutters and directing runoff to vegetated areas to infiltrate, and redirecting the flow of runoff from impervious driveways to vegetated areas instead of to the street or gutter.

Below are the steps that must be undertaken to meet the Ordinance requirements. The results obtained for each step must be included in the Simplified Method Worksheet found in Table B-4:

STEP 1 – Determine the total area of all regulated impervious surfaces that will need to drain to one or more BMPs. Determine locations where BMPs need to be placed so that runoff from all of the proposed impervious surfaces can be captured. Select the BMPs to be used and determine the requirements of each from Section B.3. For instance, the back half of a garage may drain 200 square feet of roof to a rain barrel, and the front half of a garage may drain 200 square feet of roof and 540 square feet of driveway to a bioretention area. Then, obtain the required storage volume and surface area needed for each of the proposed BMPs from the appropriate heading below.

For Rain Barrels/Cisterns

STEP 2 –Select the regulated impervious area value in Column 1 of Table B-1 that is closest to, but not less than, the determined value.

STEP 3 – Determine the volume that needs to be provided in cubic feet and gallons to satisfy the volume requirements using Columns 2 and 3 in Table B-1.

Table B-1: Simplified Method - Calculating Rain Barrel/Cistern Storage Volume for 1” Rainfall¹

Column 1	Column 2	Column 3	
Regulated Impervious Area (square feet)	Volume of Rain Barrel/Cistern ² (cubic feet)	Volume of Rain Barrel/Cistern (gallons)	
<i>I</i>	V_{RBcf}	V_{RBgal}	
Sum of all Proposed Impervious Areas	$(1*(1/12)*I)/0.75=V_{RBcf}$	$VRBcf * 7.48=VRBgal$	
50	6	42	
100	11	83	
150	17	125	
200	22	166	
250	28	208	
300	33	249	
350	39	291	
400	44	332	
450	50	374	
500	56	416	
550	61	457	
600	67	499	
650	72	540	
700	78	582	
750	83	623	
800	89	665	
850	94	706	
900	100	748	
950	106	790	
999	111	830	

¹The typical volume of a rain barrel is between 50-200 gallons, so more than 1 rain barrel may be needed. Larger volumes may require a cistern.

²Assume that the rain barrel/cistern is 25% full

For Rain Gardens/Bioretenction or Dry Well #1:

STEP 2 – Select the regulated impervious area value in Column 1 of Table B-2 that is closest to, but not less than, the determined value.

STEP 3 - Determine the volume that needs to be provided in cubic feet to satisfy the volume requirements using Column 2 in Table B-2.

STEP 4 – Using the value from Column 2 determined above, select the depth (D) of the proposed BMP, and then simply determine the surface area needed for that depth from Column 3 of Table B-2.

Note: The arrows under Column 3 in Table B-2 indicate which range of depths is appropriate for each BMP. To determine the depth based on the area, select an area that corresponds to the required volume that is closest to, but not more than the area to be used. To determine the area based on the depth, select a depth that is closest to, but not less than, the depth that is to be used.

Table B-2: Simplified Method - Calculating Rain Garden/Bioretenation and Dry Well #1 Storage Volume and Surface Area for 1" Rainfall

Column 1	Column 2	Column 3									
Regulated Impervious Area (square feet)	Volume of Rain Garden/Bioretenation or Dry Well #1 ¹ (cubic feet)	Surface Area of Rain Garden/Bioretenation or Dry Well #1 Acceptable Depths for Each BMP are indicated by the arrows below (square feet)									
		Area Required for a BMP with a Depth(D) of 0.5'	Area Required for a BMP with a Depth(D) of 1.0'	Area Required for a BMP with a Depth(D) of 1.5'	Area Required for a BMP with a Depth(D) of 2.0'	Area Required for a BMP with a Depth(D) of 2.5'	Area Required for a BMP with a Depth(D) of 3.0'	Area Required for a BMP with a Depth(D) of 3.5'	Area Required for a BMP with a Depth(D) of 4.0'		
		<div style="border: 1px solid purple; padding: 2px; display: inline-block;">Rain Garden /Bioretenation (0.5'-1.0')</div>		<div style="border: 1px solid red; padding: 2px; display: inline-block;">Dry Well #1 (1.5'-4.0')</div>							
<i>I</i>	<i>V</i>	<i>A(sf)</i>

600	50	100	50	33	25	20	17	14	13		
650	54	108	54	36	27	22	18	15	14		
700	58	117	58	39	29	23	19	17	15		
750	63	125	63	42	31	25	21	18	16		
800	67	133	67	44	33	27	22	19	17		
850	71	142	71	47	35	28	24	20	18		
900	75	150	75	50	38	30	25	21	19		
950	79	158	79	53	40	32	26	23	20		
999	83	167	83	56	42	33	28	24	21		

¹Assume that the rain garden/bioretenation or the dry well #1 are 0% full

For Infiltration Trench or Dry Well #2:

STEP 2 – Select the regulated impervious area value in Column 1 of Table B-3 that is closest to, but not less than, the determined value.

STEP 3 - Determine the volume that needs to be provided in cubic feet to satisfy the volume requirements using Column 2 in Table B-3.

STEP 4 – Using the value from Column 2 determined above, select the depth (D) of the proposed BMP, and then simply determine the surface area needed from Column 3 of Table B-3.

Note: The arrows under Column 3 in Table B-3 indicate which range of depths is appropriate for each BMP. To determine the depth based on the area, select an area that corresponds to the required volume that is closest to, but not less than, the area to be used. To determine the area based on the depth, select a depth that is closest to, but not less than, the depth that is to be used.

STEP 5 - Sketch a simple site plan as shown in Figure B-1 that includes:

- Name and address of the owner of the property, and or name and address of the individual preparing the plan, along with the date of submission.
- Location of proposed structures, driveways, or other paved areas with approximate size in square feet.
- Location, orientation, and dimensions of all proposed BMPs. For all rain gardens/bioretention, infiltration trenches, and dry wells, the length, width, and depth must be included on the plan. For rain barrels or cisterns the volume must be included.
- Location of any existing or proposed on-site septic system and/or potable water wells showing rough proximity to infiltration facilities.
- Location of any existing waterbodies such as; streams, lakes, ponds, wetlands, or other waters of the Commonwealth within fifty (50) feet of the project site, and the distance to the project site and/or BMPs. The project or BMPs cannot be located less than fifty (50) feet away from a perennial or intermittent stream. If an existing buffer is legally prescribed (i.e., deed, covenant, easement, etc.) and it exceeds the requirements of this Ordinance, the existing buffer shall be maintained.
- Location of all existing structures including buildings, driveways, and roads within fifty (50) feet of the project site.

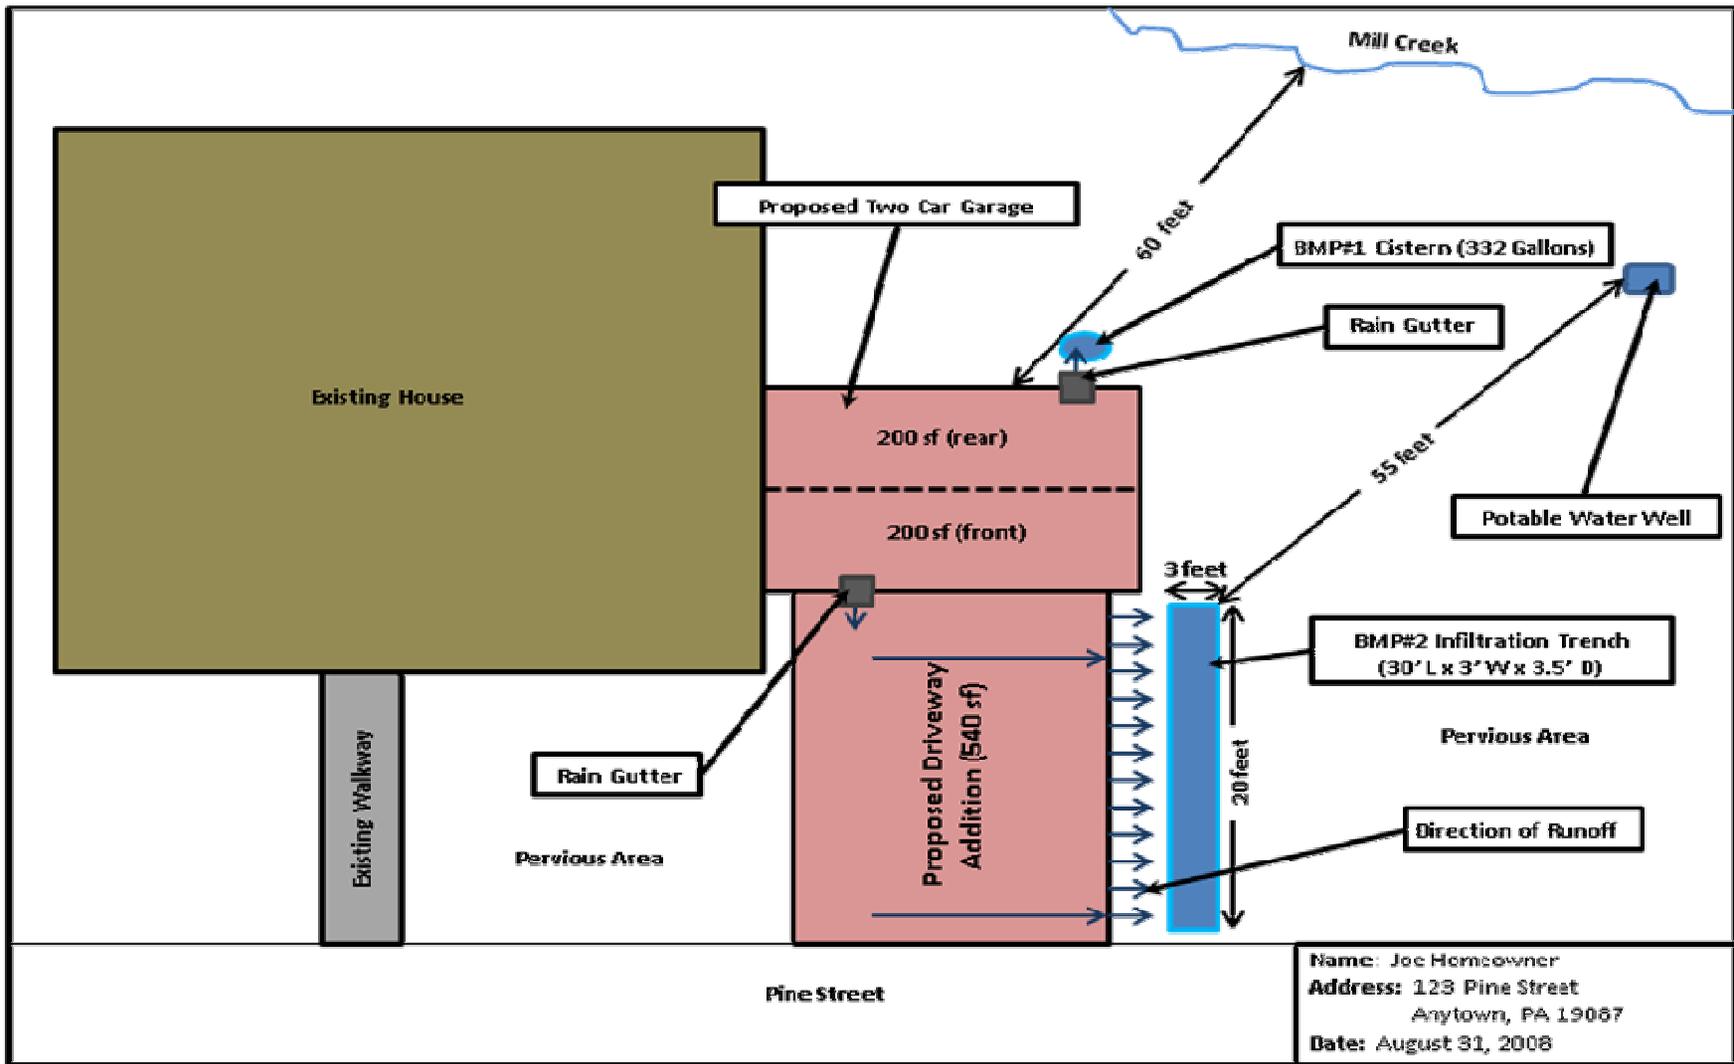

Fill in the simplified method worksheet found in Table B-4, then submit the worksheet and the simple site sketch to the Municipality. Additionally, the operation and maintenance agreement found in Section B.5 must be signed and submitted to the Municipality.

Table B-3: Simplified Method - Calculating Infiltration Trench and Dry Well #2 Storage Volume and Surface Area for 1” Rainfall

Column 1	Column 2	Column 3

B.2 Definitions

Best Management Practice (BMP) - Activities, facilities, designs, measures, or procedures used to manage stormwater impacts from land development, to protect and maintain water quality and groundwater recharge and to otherwise meet the purposes of the Municipal Stormwater Management Ordinance, including but not limited to infiltration trenches, dry wells, bioretention, rain gardens, permeable paving, rain barrels, and cisterns.

Capture - Collecting runoff to be stored for reuse or allowed to slowly infiltrate into the ground.

Geotextile - A fabric manufactured from synthetic fiber that is used to achieve specific objectives, including infiltration, separation between different types of media (i.e., between soil and stone), or filtration.

Hotspot - Areas where land use or activities generate highly contaminated runoff, with concentrations of pollutants that are higher than those that are typically found in stormwater (e.g., vehicle salvage yards and recycling facilities, vehicle fueling stations, fleet storage areas, vehicle equipment and cleaning facilities, and vehicle service and maintenance facilities).

Impervious Surface - A surface that prevents the infiltration of water into the ground. Impervious surfaces include, but are not limited to, streets, sidewalks, pavements, swimming pools, driveway areas or roofs.

Infiltration - Movement of surface water into the soil, where it is absorbed by plant roots, evaporated into the atmosphere, or percolated downward to recharge groundwater.

Low Impact Development - A land development and construction approach that uses various land planning, design practices, and technologies to simultaneously conserve and protect natural resource systems, and reduce infrastructure costs.

Pervious Surface - Any surface that is not impervious.

Runoff - Any part of precipitation that flows over the land surface.

Stormwater - Drainage runoff from the surface of the land resulting from precipitation or snow or ice melt.

Void Ratio - The ratio of the volume of void space to the volume of solid substance in any material.

B.3 Description of BMPs

The following is a description of several types of BMPs that could be implemented. The requirements of each BMP as described below are taken directly from the PA BMP Manual. Refer to the PA BMP Manual which can be found on the PA Department of Environmental Protection's website.

Rain Barrels/Cisterns

Rain barrels are large containers that collect drainage from roof leaders and temporarily store water to be released to lawns, gardens, and other landscaped areas after the rainfall has ended. Rain barrels are typically between 50 and 200 gallons in size. The stored water can also be used as a non-potable water supply. Cisterns are larger than rain barrels having volumes of 200 gallons or more, and can be placed on the surface or underground. Figures B-2 and B-3 show examples of rain barrels and cisterns, respectively, that could be used. Rain barrels and cisterns are manufactured in a variety of shapes and sizes. All of these facilities must make provisions for the following items:

- There must be a means to release the water stored between storm events in order for the necessary storage volume to be available for the next storm.
- Stormwater must be kept from entering other potable systems, and pipes and storage units must be clearly marked "Do Not Drink."
- An overflow outlet should be placed a few inches below the top with an overflow pipe to divert flow away from structures.
- Use screens to filter debris, and covers (lids) to prevent mosquitoes.
- Make sure cisterns are watertight and do not leak.
- Rain barrels are typically assumed to be 25% full to calculate volume since they are not always emptied before each storm.*

Figure B-2: Rain Barrels

Source (pic on left): <http://www.rfcity.org/Eng/Stormwater/YourProperty/YourProperty.htm>
Source (pic on right): <http://www.floridata.com/tracks/transplantedgardener/Rainbarrels.cfm>

*This 25% has already been taken into account in Table 3.

Figure B-3: Cisterns

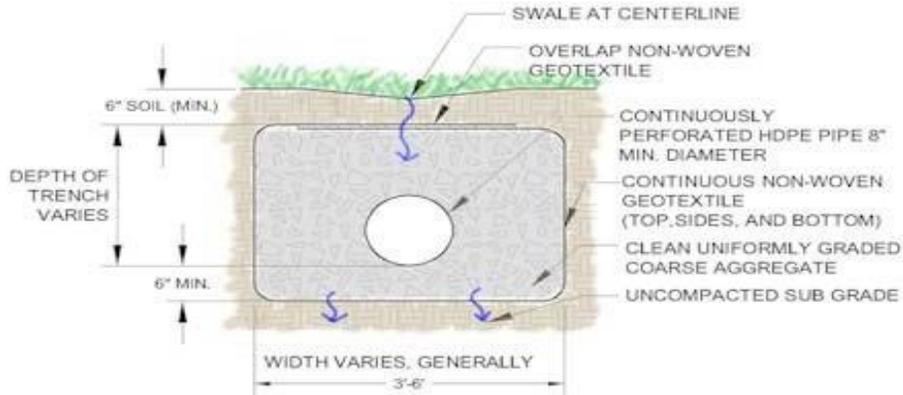

Source (for both pics): Pennsylvania Stormwater BMP Manual (2006)

Infiltration Trench

An infiltration trench is a long, narrow, rock-filled trench with or without a perforated pipe that receives stormwater runoff and has no outlet. Runoff is stored in the void space between the stones and in the pipe and infiltrates through the bottom and into the underlying soil matrix. Infiltration trenches perform well for removal of fine sediment and associated pollutants. Figure B-4 shows a typical infiltration trench configuration. Infiltration trenches shall incorporate or make provisions for the following elements:

- Perforated pipe is to be set level.
- The width is limited to between **3 and 8 feet**, and the depth ranges from **2 to 6 feet**.
- Trench should be wrapped in nonwoven geotextile (see definition in Section B.2) on the top, sides, and bottom.
- There should be a positive overflow that allows stormwater that cannot be stored or infiltrated to be discharged into a nearby vegetated area.
- Roof downspouts may be connected to infiltration trenches, but should contain a cleanout to collect sediment and debris before entering the infiltration area.
- Infiltration testing is recommended to ensure that the soil is capable of infiltrating stormwater. A description of how an infiltration test is performed is found in Appendix C of the PA BMP Manual.
- It is recommended that there be a 2-foot clearance above the regularly occurring seasonal high water table and a minimum depth to bedrock of 2 feet.
- The infiltration trench should be at least 50 feet from individual water supply wells, 100 feet from community or municipal water supply wells, and 50 feet from any septic system component. It should not be located near hotspots (see definition in Section B.2).
- The infiltration trench should be located so that it presents no threat to sub-surface structures such as building foundations and basements.
- Protect infiltration areas from compaction.
- The ratio of the collected area to the footprint of the facility should be as small as possible with a ratio of less than 5:1 preferred.

Figure B-4: Typical Infiltration Trench

Source: Pennsylvania Stormwater BMP Manual (2006)

Rain Garden/Bioretention Area

A rain garden (bioretention area) is an excavated depression area on the surface of the land in which native vegetation is planted to filter and use stormwater runoff. Runoff ponds on top of the surface of the rain garden and then infiltrates into an enhanced soil below the surface where plants can use the water to grow. Bioretention also improves water quality, vegetation filters the water, and the root systems encourage or promote infiltration. Figure B-5 shows a typical rain garden. Key elements of a rain garden include:

- Ponding depths of **1 foot** or less (recommended).
- Native vegetation that can tolerate dry and wet weather.
- An overflow area where, if the bioretention area were to overflow, the water would flow over pervious area (i.e., grass, meadow), and would not cause harm to property, or;
- An overflow such as a domed riser to allow excess flow from large storms to travel to other substantial infiltration areas or pervious areas.
- Typical side slopes of 3:1 are recommended, with 2:1 being the maximum.
- The soil/planting mix depth should be between 1.5 feet and 6 feet deep.

Figure B-5: Typical Rain Garden/Bioretention Area

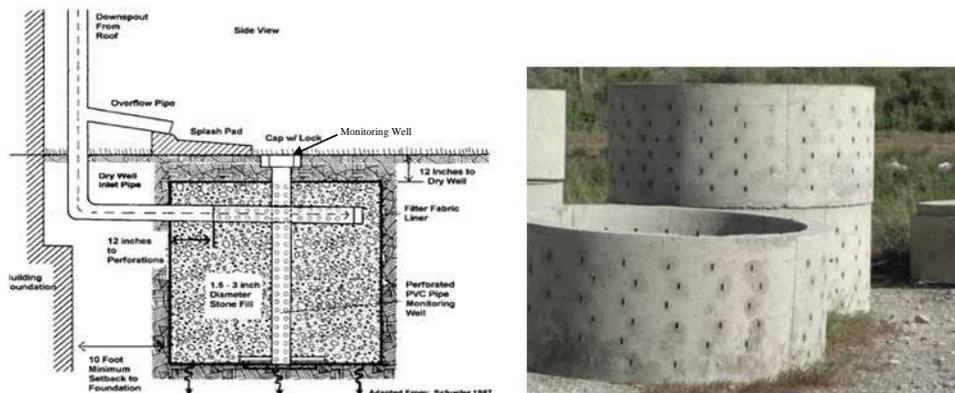

Source: Pennsylvania Stormwater BMP Manual (2006)

Dry Wells

A dry well, also referred to as a seepage pit is a subsurface storage facility that temporarily stores and infiltrates runoff from the roofs of buildings or other impervious surfaces. A dry well can be either a structural prefabricated chamber (Dry Well #1) or an excavated pit filled with stone fill (Dry Well #2). Dry wells discharge the stored runoff via infiltration into the surrounding or underlying soils. Figure B-6 shows a typical prefabricated dry well and a typical dry well configuration with stone fill. The following elements shall be incorporated into all dry well designs:

- These facilities should be located a minimum of ten (10) feet from the building foundation to avoid foundation seepage problems and are not recommended if their installation would create a risk for basement flooding.
- Construction of a dry well should be performed after surface soils in all other areas of the site are stabilized to avoid clogging.
- During construction, compaction of the subgrade soil in the bottom of the dry well should be avoided, and construction should be performed only with light machinery.
- Depth of a dry well should be between **1.5 feet and 4 feet**. Gravel fill should consist of stone of an average of one and one half to three (1.5 – 3.0) inches in diameter with the gravel fill wrapped in a nonwoven geotextile that separates the stone fill from the surrounding soil.
- At least 1 foot of soil needs to be placed over the top of the dry well.
- Dry wells should be inspected at least four (4) times annually as well as after large storm events.
- Dry wells should have overflow pipes to allow high volumes of runoff to connect to other on-site substantial infiltration areas or pervious areas.
- Every dry well needs to have at least one monitoring well.
- Infiltration testing is recommended to ensure that the underlying soil is capable of infiltrating the needed volume of stormwater.

B.4 Example

Simplified Approach Volume Determination:

Joe Homeowner wants to build a 400 square foot two car garage, and a 540 square foot (30' L x 18' W) impervious driveway that is graded so that the stormwater runoff drains to the grassy area along one edge of the driveway. (A duplicate of Table B-1 is provided below in Table B-5, a duplicate of Table B-3 is provided below in Table B-6 and outlines the steps of this example) a duplicate of Figure B-1 (Figure B-7) and a duplicate of Table B-4 are provided in Table B-7.

STEP 1 - Determine the total area of all regulated impervious surfaces to drain to each BMP:

Garage Roof (Front)	10 ft. x 20 ft.	=	200 sq. ft
Garage Roof (Rear)	10 ft. x 20 ft.	=	200 sq. ft.
Driveway (Front)	30 ft. x 18 ft.	=	540 sq. ft.

Total Regulated Impervious Surface			940 sq. ft.

Note: If the driveway used pervious pavement (i.e., paving blocks), then the total impervious area would only be 400 square feet, and no stormwater management practices would need to control runoff from the driveway.

Select a BMP or combination of BMPs from Section B.3 to be used to satisfy the volume requirement. Determine the length, width, depth and other requirements for the BMPs in Section B.3. A BMP needs to be placed to catch runoff from the back of the garage, and a BMP needs to be placed to capture runoff from the front of the garage and the driveway. Figure B-7 shows the direction the runoff flows and the locations where the BMPs are to be placed.

Joe Homeowner would like to use a rain barrel (BMP #1) to capture the runoff from the rear of the garage and an infiltration trench (BMP #2) to capture runoff from the front of the garage and the driveway.

STEP 2 and 3 for BMP #1 (Rain Barrel/Cistern)

STEP 2 - Select the regulated impervious area value for BMP #1, the rain barrel or cistern, in Column 1 that is closest to, but not less than 200 in Table B-5:

The value in Column 1 that is closest to but is not less than 200 is 200.

STEP 3 - Determine the volume that BMP #1 must be to satisfy the volume requirements using Columns 2 and 3 in Table B-5:

The volume in gallons of the rain barrel/cistern to be used as BMP #1, assuming the rain barrel/cistern is 25% full, is determined by finding the row in Column 3 that corresponds to the impervious area value determined in Step 1. Therefore, the volume of BMP #1, the rain barrel/cistern must be ≥ 166 gallons. A combination of rain barrels could be used in succession as shown in Figure B-2, or a cistern could be used.

Table B-5: Example – Calculating Storage Volume for Rain Barrel/Cistern

Column 1	Column 2	Column 3	
Regulated Impervious Area (square feet)	Volume of Rain Barrel/Cistern ¹ (cubic feet)	Volume of Rain Barrel/Cistern (gallons)	
<i>I</i>	V_{RBcf}	V_{RBgal}	
Sum of all Regulated Impervious Areas	$(1*(1/12)*I)/0.75=V_{RBcf}$	$V_{RBcf} * 7.48=V_{RBgal}$	
50	6	42	↑ Rain Barrel
100	11	83	
150	17	125	
2 200	22	3 166	↓
250	28	208	
300	33	249	↑ Cistern
350	39	291	
400	44	332	
450	50	374	
500	56	416	
550	61	457	
600	67	499	
650	72	540	
700	78	582	
750	83	623	
800	89	665	↓
850	94	706	
900	100	748	
950	106	790	
999	111	830	↓

¹Assume that the rain barrel/cistern is 25% full

STEPS 2 through 4 for BMP #2 (Infiltration Trench)

STEP 2 - Select the regulated impervious area value for BMP #2, the infiltration trench, using Column 1 in Table B-6:

Find the row in Column 1 that is closest to but not less than 740 (200 from the front of the garage + 540 from the driveway). Therefore, the value selected is 750.

STEP 3 - Determine the volume that BMP #2, the infiltration trench must be to satisfy the volume requirements using Column 2 in Table B-6:

The volume of the infiltration trench to be used as BMP #2, assuming a void ratio of 40%, is determined by finding the row in Column 2 that is in the same row as 750 square feet from Step 2. Therefore, the volume of BMP #2 must be 156 cubic feet.

STEP 4 - Utilizing the value from Column 2 determined above, and the surface area that the proposed BMP will occupy, identify the proposed depth and corresponding surface area needed using Column 3 in Table B-6:

Joe Homeowner would like to place the infiltration trench along the edge of the driveway that the runoff drains to, so it would have a length of 20 feet. The smallest width that can be used, as stated in the infiltration trench requirements in Section B.3, is 3 feet. Therefore, the area of the infiltration trench is:

$$20 * 3 = 60 \text{ square feet}$$

To find the minimum depth of the trench, move toward the right side of the table from 156 cubic feet in Column 2 to Column 3, and find the column with a value of as close to but not more than 60 square feet, which is 52 square feet. Then obtain the minimum depth of the facility by reading the depth from the column heading at the top of the table. Therefore, the depth of the trench would need to be 3 feet.

Selected BMPs: Rain barrel(s) \geq 166 gallons and a 20' L x 3' W x 3' D infiltration trench

STEP 5 – Make a sketch of the site plan as shown in Figure B-7, and fill in the simplified method worksheet found as shown in Table B-7.

Table B-6: Example – Calculating Storage Volume Surface Area and Depth for Infiltration Trench

Column 1	Column 2	Column 3							
Total Regulated Impervious Area	Volume of Infiltration Trench or Dry Well #2* (cubic feet)	Surface Area of Infiltration Trench or Dry Well #2 Acceptable Depths for Each BMP are indicated by the arrows below (square feet)							
		Area Required for a BMP with a Depth(D) of 1.5'	Area Required for a BMP with a Depth(D) of 2.0'	Area Required for a BMP with a Depth(D) of 2.5'	Area Required for a BMP with a Depth(D) of 3.0'	Area Required for a BMP with a Depth(D) of 3.5'	Area Required for a BMP with a Depth(D) of 4.0'	Area Required for a BMP with a Depth(D) of 4.5'	Area Required for a BMP with a Depth(D) of 5.0'
<i>I</i>	<i>V</i>	<i>A(sf)</i>							
Sum of all Regulated Impervious Areas	$(1*(1/12)*I)/\text{Void Ratio } (0.4)*=V$	$V/D=A$

B.5 Simplified Operation, Inspection, and Maintenance Plan

It is the property owner's responsibility to properly maintain BMPs. It is also the property owner's responsibility to inform any future buyers of the function, operation, and maintenance needed for any BMPs on the property prior to the purchase of the property. The following maintenance agreement outlines the maintenance required for each type of BMP, the responsibilities of the property owner, and the rights of the Municipality in regards to inspection and enforcement of the maintenance requirements. The Operation and Maintenance Agreement must be signed and submitted to the Municipality.

STORMWATER BEST MANAGEMENT PRACTICES OPERATIONS, MAINTENANCE, AND INSPECTION AGREEMENT

THIS AGREEMENT, made and entered into this _____ day of _____, 200_, by and between _____, (hereinafter the "Landowner"), and _____ (County, Township, or Borough) Pennsylvania, (hereinafter "Municipality");

WITNESSETH

WHEREAS, the Landowner is the owner of certain real property as recorded by deed in the land records of _____ County, Pennsylvania, Deed Book _____ at Page _____, (hereinafter "Property"); and,

WHEREAS, the Landowner _____ recognizes that the stormwater management best management practices or BMPs (hereinafter referred to as "the BMP" or "BMPs") must be maintained for the development called, _____, located at _____ (address of property where BMP is located); and,

WHEREAS, the Municipality and the Landowner, its administrators, executors, successors, heirs, or assigns, agree that the health, safety, and welfare of the residents of the Municipality and the protection and maintenance of water quality require that on-site stormwater Best Management Practices be constructed and maintained on the property; and,

WHEREAS, the Landowner is required to inform future buyers of the property about the function of, operation, and maintenance requirements of the BMP or BMPs prior to the purchase of the property by said future buyer, and upon purchase of the property the future buyer assumes all responsibilities as Landowner and must comply with all components of this agreement.

WHEREAS, for the purposes of this agreement, the following definition shall apply:

- BMP – “Best Management Practice;” activities, facilities, designs, measures, or procedures used to manage stormwater impacts from land development, to protect and maintain water quality and groundwater recharge, and to otherwise meet the purposes of the Municipal Stormwater Management Ordinance, including, but not limited to, infiltration trenches, dry wells, bioretention, rain gardens, permeable paving, rain barrels, and cisterns.

WHEREAS, it is required that the BMP or BMPs as shown on the simple sketch plan further referred to as the “Plan” and in accordance with the sizing calculations found on the simplified method worksheet further referred to as the “Calculation Worksheet” be constructed and maintained by the Landowner, its administrators, executors, successors, heirs, or assigns.

WHEREAS, the Municipality requires that stormwater management BMPs be constructed and adequately operated and maintained by the Landowner, its administrators, executors, successors, heirs, or assigns, in accordance with the following maintenance requirements.

- Vegetation along the surface of an infiltration trench should be maintained in good condition, and any bare spots should be revegetated as soon as possible.

- Vehicles shouldn't be parked or driven on an infiltration trench, and care should be taken to avoid excessive compaction by mowers.
- Any debris such as leaves blocking flow from reaching an infiltration trench or bioretention/rain garden should be routinely removed.
- While vegetation is being established, pruning and weeding may be required for a bioretention/rain garden.
- Mulch in a bioretention/rain garden needs to be re-spread when erosion is evident. Once every two to three years or after major storms the entire area may require mulch replacement.
- At least twice a year the landowner needs to inspect the bioretention/rain garden for sediment buildup and vegetative conditions.
- During periods of extended drought, the bioretention/rain garden requires watering.
- Trees and shrubs in a bioretention/rain garden need to be inspected at least twice per year by the landowner to evaluate their health. If they are in poor health, they need to be replaced.
- Dry wells need to be inspected by the landowner at least four times a year and after significant rainfalls, and debris/trash, sediment, and any other waste material need to be removed and disposed of at suitable disposal/recycling sites and in compliance with local, state, and federal waste regulations.
- For dry wells, gutters need to be regularly cleaned out, and proper connections must be maintained to facilitate the effectiveness of the dry well.
- The filter screen for the dry well that intercepts roof runoff must be replaced as necessary.
- Dry wells that are damaged need to be fixed or replaced within two weeks of being damaged.
- If an intermediate sump box exists in conjunction with a dry well, it must be cleaned out at least once per year.
- Rain barrels and cisterns need to be cleared of debris routinely at least every three months and after significant storms to allow stormwater from gutters to enter them.

- Gutters that directly convey rain water to dry wells, rain barrels, and cisterns need to be routinely cleared of trash and debris at least every three months and after significant storms.
- Rain barrels and cisterns must be kept covered.
- Rain barrels and cisterns should be routinely emptied so that they are only ¼ of the way full to allow for storage of additional rainwater.
- Overflow outlets from rain barrels and cisterns must be kept free and clear of debris.
- Rain barrels and cisterns that are damaged need to be fixed or replaced within two weeks of being damaged.

NOW, THEREFORE, in consideration of the foregoing promises, the mutual covenants contained herein, and the following terms and conditions, the parties hereto agree as follows:

1. The BMPs shall be constructed by the Landowner in accordance with specifications identified in the Plan and Calculation Worksheet.
2. The Landowner shall operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality and in accordance with the specific maintenance requirements outlined in this agreement.
3. The Landowner hereby grants permission to the Municipality, its authorized agents, and employees to enter upon the property at reasonable times and upon presentation of proper identification, to inspect the BMP(s) whenever it deems necessary. Whenever possible, the Municipality shall notify the Landowner prior to entering the property.
4. In the event that the Landowner fails to operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality, the Municipality or its representatives may enter upon the property and take whatever action is deemed necessary to maintain said BMP(s). This provision shall not be construed to allow the Municipality to erect any permanent structure on the land of the Landowner. It is expressly understood and agreed that the Municipality is under no obligation to maintain or repair said facilities, and in no event shall this Agreement be construed to impose any such obligation on the Municipality.

5. In the event that the Municipality, pursuant to this Agreement, performs work of any nature, or expends any funds in performance of said work for labor, use of equipment, supplies, materials, and the like, the Landowner shall reimburse the Municipality for all expenses (direct and indirect) incurred within ten days of receipt of an invoice from the Municipality.
6. The intent and purpose of this Agreement is to ensure the proper maintenance of the on-site BMP(s) by the Landowner; provided, however, that this Agreement shall not be deemed to create or affect any additional liability of any party for damage alleged to result from or be caused by stormwater runoff.
7. The Landowner, its executors, administrators, assigns, heirs, and other successors in interests, shall release the Municipality's employees and designated representatives from all damages, accidents, casualties, occurrences, or claims which might arise or be asserted against said employees and representatives from the construction, presence, existence, or maintenance of the BMP(s) by the Landowner or Municipality. In the event that a claim is asserted against the Municipality, its designated representatives, or employees, the Municipality shall promptly notify the Landowner and the Landowner shall defend, at his own expense, any suit based on the claim. If any judgment or claims against the Municipality's employees or designated representatives shall be allowed, the Landowner shall pay all costs and expenses regarding said judgment or claim.

This Agreement shall be recorded at the Office of the Recorder of Deeds of _____ County, Pennsylvania, and shall constitute a covenant running with the Property and/or equitable servitude, and shall be binding on the Landowner, his administrators, executors, assigns, heirs, and any other successors in interests, in perpetuity.

APPENDIX E

LOW IMPACT DEVELOPMENT (LID) PRACTICES PRIMARY

APPROACH FOR MANAGING STORMWATER RUNOFF

Natural hydrologic conditions can be altered radically by poorly planned development practices such as introducing unnecessary impervious surfaces, destroying existing drainage swales, constructing unnecessary storm sewers, and changing local topography. A traditional drainage approach of development has been to remove runoff from a site as quickly as possible and capture it in a detention basin. This approach leads ultimately to the degradation of water quality as well as expenditure of additional resources for detaining and managing concentrated runoff at some downstream location.

The recommended alternative approach is to promote practices that will minimize proposed conditions' runoff rates and volumes, which will minimize needs for artificial conveyance and storage facilities. To simulate predevelopment hydrologic conditions, infiltration is often necessary to offset the loss of infiltration by creation of impervious surfaces. The ability of the ground to infiltrate depends upon the soil types and its conditions.

Preserving natural hydrologic conditions requires careful alternative site design considerations. Site design practices include preserving natural drainage features, minimizing impervious surface area, reducing the hydraulic connectivity of impervious surfaces, and protecting natural depression storage. A well-designed site will contain a mix of all of those features. The following describes various techniques to achieve the alternative approach:

- **Preserving Natural Drainage Features.** Protecting natural drainage features, particularly vegetated drainage swales and channels, is desirable because of their ability to infiltrate and attenuate flows and to filter pollutants. However, this objective is often not accomplished in land development. In fact, commonly held drainage philosophy encourages just the opposite pattern; streets and adjacent storm sewers are typically located in the natural headwater valleys and swales, thereby replacing natural drainage functions with a completely impervious system. As a result, runoff and pollutants generated from impervious surfaces flow directly into storm sewers with no opportunity for attenuation, infiltration, or filtration. Developments designed to fit site topography also minimize the amount of grading on site.
- **Protecting Natural Depression Storage Areas.** Depressional storage areas either have no surface outlet or drain very slowly following a storm event. They can be commonly seen as ponded areas in farm fields during the wet season or after large runoff events. Traditional development practices eliminate these depressions by filling or draining, thereby obliterating their ability to reduce surface runoff volumes and trap pollutants. The volume and release rate characteristics of depressions should be protected in the design of the development site. The depressions can be protected by simply avoiding the depression or by incorporating its storage as additional capacity in required detention facilities.

HAVERFORD CODE

- **Avoiding Introduction of Impervious Areas.** Careful site planning should consider reducing impervious coverage to the maximum extent possible. Building footprints, sidewalks, driveways, and other features producing impervious surfaces should be evaluated to minimize impacts on runoff.
- **Reducing the Hydraulic Connectivity of Impervious Surfaces.** Impervious surfaces are significantly less of a problem if they are not directly connected to an impervious conveyance system (such as a storm sewer). Two basic ways to reduce hydraulic connectivity are routing of roof runoff over lawns and reducing the use of storm sewers. Site grading should promote increasing travel time of stormwater runoff and should help reduce concentration of runoff to a single point in the development.
- **Routing Roof Runoff Over Lawns.** Roof runoff can be easily routed over lawns in most site designs. The direct connection of downspouts to storm sewers or parking lots is prohibited except on a case-by-case basis as determined by the Township. The practice also discourages sloping driveways and parking lots to the street. By routing roof drains and crowning the driveway to run off to the lawn, the lawn is essentially used as a filter strip.
- **Reducing the Use of Storm Sewers.** By reducing use of storm sewers for draining streets, parking lots, and back yards, the potential for accelerating runoff from the development can be greatly reduced. The practice requires greater use of swales and may not be practical for some development sites, especially if there are concerns for areas that do not drain in a “reasonable” time. The practice requires educating local citizens and public works officials who expect runoff to disappear shortly after a rainfall event.
- **Reducing Street Widths.** Narrower neighborhood streets could reduce impervious and lower maintenance.
- **Limiting Sidewalks to One Side of the Street.** A sidewalk on one side of the street may suffice in low-traffic neighborhoods. The lost sidewalk could be replaced with bicycle/recreational trails that follow back-of-lot lines. Where appropriate, backyard trails should be constructed using pervious materials.
- **Using Permeable Paving Materials.** These materials include permeable interlocking concrete paving blocks or porous bituminous concrete. Such materials should be considered as alternatives to conventional pavement surfaces, especially for low use surfaces such as driveways, overflow parking lots, and emergency access roads.
- **Reducing Building Setbacks.** Reducing building setbacks reduces impervious cover associated with driveway and entry walks and is most readily accomplished along low-traffic streets where traffic noise is not a problem.
- **Constructing Cluster Developments.** Cluster developments can also reduce the amount of impervious area for a given number of lots. The biggest savings occur with street length, which also will reduce costs of the development. Cluster development

EROSION AND SEDIMENT CONTROL; STORMWATER MANAGEMENT

groups the construction activity in less-sensitive areas without substantially affecting the gross density of development.

In summary, a careful consideration of the existing topography and implementation of a combination of the above-mentioned techniques may avoid construction of costly stormwater control measures. Benefits include reduced potential for downstream flooding and water quality degradation of receiving streams/water bodies, enhancement of aesthetics, and reduction of development costs. Other benefits include more stable baseflows in receiving streams, improved groundwater recharge, reduced flood flows, reduced pollutant loads, and reduced costs for conveyance and storage.

TABLE F-4

NONSTRUCTURAL STORMWATER MANAGEMENT MEASURES

Nonstructural Stormwater Measure	Description
Natural area conservation	Conservation of natural areas such as forest, wetlands, or other sensitive areas in a protected easement, thereby retaining their existing hydrologic and water quality characteristics.
Disconnection of rooftop runoff	Rooftop runoff is disconnected and then directed over a pervious area where it may either infiltrate into the soil or filter over it. This is typically obtained by grading the site to promote overland flow or by providing bioretention on single-family residential lots.
Disconnection of nonrooftop runoff	Disconnect surface impervious cover by directing it to pervious areas where it is either infiltrated or filtered through the soil.
Buffers	Buffers effectively treat stormwater runoff. Effective treatment constitutes capturing runoff from pervious and impervious areas adjacent to the buffer and treating the runoff through overland flow across a grassy or forested area.
Grass channel (open section roads)	Open grass channels are used to reduce the volume of runoff and pollutants during smaller storms.
Environmentally sensitive rural development	Environmental site design techniques are applied to low-density or rural residential development.

APPENDIX G

WEST NILE VIRUS GUIDANCE

(This source is from the Monroe County, PA Conservation District that researched the potential of West Nile Virus problems from BMPs due to a number of calls they were receiving)

Monroe County Conservation District Guidance: Stormwater Management and West Nile Virus

Source: Brodhead McMichaels Creeks Watershed Act 167 Stormwater Management Ordinance Final Draft 2/23/04

The Monroe County Conservation District recognizes the need to address the problem of nonpoint source pollution impacts caused by runoff from impervious surfaces. The new stormwater policy being integrated into Act 167 stormwater management regulations by the PA Department of Environmental Protection (DEP) will make nonpoint pollution controls an important component of all future plans and updates to existing plans. In addition, to meet post-construction anti-degradation standards under the state National Pollutant Discharge Elimination System (NPDES) permitting program, applicants will be required to employ Best Management Practices (BMPs) to address nonpoint pollution concerns.

Studies conducted throughout the United States have shown that wet basins and in particular constructed wetlands are effective in traditional stormwater management areas such as channel stability and flood control and are one of the most effective ways to remove stormwater pollutants (United States Environmental Protection Agency 1991, Center for Watershed Protection 2000). From Maryland to Oregon, studies have shown that as urbanization and impervious surfaces increase in a watershed, the streams in those watersheds become degraded (CWP 2000). Although there is debate over the threshold of impervious cover when degradation becomes apparent (some studies show as little as 6% while others show closer to 20%), there is agreement that impervious surfaces cause non-point pollution in urban and urbanizing watersheds and that degradation is ensured if stormwater BMPs are not implemented.

Although constructed wetlands and ponds are desirable from a water quality perspective, there may be concerns about the possibility of these stormwater management structures becoming breeding grounds for mosquitoes. The Conservation District feels that although it may be a valid concern, municipalities should not adopt ordinance provisions prohibiting wet basins for stormwater management.

Mosquitoes

The questions surrounding mosquito production in wetlands and ponds have intensified in recent years by the outbreak of the mosquito-borne West Nile Virus. As is the case with all vector-borne maladies, the life cycle of West Nile Virus is complicated, traveling from mosquito to bird, back to mosquito, and then to other animals including humans. *Culex pipiens* was identified as the vector

New York in 1999. This species is still considered the primary transmitter of the disease across its range. Today there are some 60 species of mosquitoes that inhabit Pennsylvania. Along with *C. pipiens*, three other species have been identified as vectors of West Nile Virus while four more have been identified as potential vectors.

The four known vectors in NE Pennsylvania are *Culex pipiens*, *C. restuans*, *C. salinarius*, and *Ochlerotatus japonicus*. All four of these species prefer, and almost exclusively use, artificial containers (old tires, rain gutters, birdbaths, etc.) as larval habitats. In the case of *C. pipiens*, the most notorious of the vector mosquitoes, the dirtier the water, the better they like it. The important factor is that these species do not thrive in functioning wetlands where competition for resources and predation by larger aquatic and terrestrial organisms is high.

The remaining four species, *Aedes vexans*, *Ochlerotatus Canadensis*, *O. triseriatus*, and *O. trivittatus*, are currently considered potential vectors due to laboratory tests (except the *O. trivittatus*, which did have one confirmed vector pool for West Nile Virus in PA during 2002). All four of these species prefer vernal habitats and ponded woodland areas following heavy summer rains. These species may be the greatest threat of disease transmission around stormwater basins that pond water for more than four days. This can be mitigated, however, by establishing ecologically functioning wetlands.

Stormwater Facilities

If a stormwater wetland or pond is constructed properly and a diverse ecological community develops, mosquitoes should not become a problem. Wet basins and wetlands constructed as stormwater management facilities should be designed to attract a diverse wildlife community. If a wetland is planned, proper hydrologic soil conditions and the establishment of hydrophytic vegetation will promote the population of the wetland by amphibians and other mosquito predators. In natural wetlands, predatory insects and amphibians are effective at keeping mosquito populations in check during the larval stage of development while birds and bats prey on adult mosquitoes.

The design of a stormwater wetland must include the selection of hydrophytic plant species for their pollutant uptake capabilities and for not contributing to the potential for vector mosquito breeding. In particular, species of emergent vegetation with little submerged growth are preferable. By limiting the vegetation growing below the water surface, larvae lose protective cover, and there is less chance of anaerobic conditions occurring in the water.

Stormwater ponds can be designed for multiple purposes. When incorporated into an open space design, a pond can serve as a stormwater management facility and a community amenity. Aeration fountains and stocked fish should be added to keep larval mosquito populations in check.

Publications from the PA Department of Health and the Penn State Cooperative Extension concerning West Nile Virus identify aggressive public education about the risks posed by standing water in artificial containers (tires, trash cans, rain gutters, bird baths) as the most effective method to control vector mosquitoes.

Conclusion

The Conservation District understands the pressure faced by municipalities when dealing with multifaceted issues such as stormwater management and encourages the incorporation of water quality management techniques into stormwater designs. As Monroe County continues to grow, conservation design, groundwater recharge, and constructed wetlands and ponds should be among the preferred design options to reduce the impacts of increases in impervious surfaces. When designed and constructed appropriately, the runoff mitigation benefits to the community from these design options will far outweigh their potential to become breeding grounds for mosquitoes.

Appendix I

**STORMWATER CONTROLS AND BEST MANAGEMENT
PRACTICES OPERATION AND MAINTENANCE AGREEMENT**

THIS AGREEMENT, made and entered into this _____ day of _____, 200__, by and between _____, (hereinafter the "Landowner"), and _____, _____ County, Pennsylvania, (hereinafter "Municipality");

WITNESSETH

WHEREAS, the Landowner is the owner of certain real property as recorded by deed in the land records of _____ County, Pennsylvania, Deed Book _____ at Page _____, (hereinafter "Property").

WHEREAS, the Landowner is proceeding to build and develop the Property; and

WHEREAS, the Stormwater Controls and BMP Operation and Maintenance Plan approved by the Municipality (hereinafter referred to as the "Plan") for the property identified herein, which is attached hereto as Appendix A and made part hereof, provides for management of stormwater within the confines of the Property through the use of Best Management Practices (BMPs); and

WHEREAS, the Municipality and the Landowner, his successors, and assigns agree that the health, safety, and welfare of the residents of the Municipality and the protection and maintenance of water quality require that on-site stormwater BMPs be constructed and maintained on the Property; and

WHEREAS, for the purposes of this agreement, the following definitions shall apply:

BMP – "Best Management Practice"-activities, facilities, designs, measures, or procedures used to manage stormwater impacts from land development, to protect and maintain water quality and groundwater recharge, and to otherwise meet the purposes of the municipal Stormwater Management Ordinance, including but not limited to infiltration trenches, seepage pits, filter strips, bioretention, wet ponds, permeable paving, rain gardens, grassed swales, forested buffers, sand filters, and detention basins.

- Infiltration Trench – A BMP surface structure designed, constructed, and maintained for the purpose of providing infiltration or recharge of stormwater into the soil and/or groundwater aquifer,
- Seepage Pit – An underground BMP structure designed, constructed, and maintained for the purpose of providing infiltration or recharge of stormwater into the soil and/or groundwater aquifer,

HAVERFORD CODE

- Rain Garden — A BMP overlain with appropriate mulch and suitable vegetation designed, constructed, and maintained for the purpose of providing infiltration or recharge of stormwater into the soil and/or underground aquifer, and

WHEREAS, the Municipality requires, through the implementation of the Plan, that stormwater management BMPs as required by said Plan and the municipal Stormwater Management Ordinance be constructed and adequately operated and maintained by the Landowner, his successors, and assigns.

NOW, THEREFORE, in consideration of the foregoing premises, the mutual covenants contained herein, and the following terms and conditions, the parties hereto agree as follows:

1. The BMPs shall be constructed by the Landowner in accordance with the plans and specifications identified in the Plan.
2. The Landowner shall operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality and in accordance with the specific maintenance requirements noted on the Plan.
3. The Landowner hereby grants permission to the Municipality, its authorized agents, and employees to enter upon the property, at reasonable times and upon presentation of proper identification, to inspect the BMP(s) whenever it deems necessary. Whenever possible, the Municipality shall notify the Landowner prior to entering the property.
4. In the event that the Landowner fails to operate and maintain the BMP(s) as shown on the Plan in good working order acceptable to the Municipality, the Municipality or its representatives may enter upon the Property and take whatever action is deemed necessary to maintain said BMP(s). This provision shall not be construed to allow the Municipality to erect any permanent structure on the land of the Landowner. It is expressly understood and agreed that the Municipality is under no obligation to maintain or repair said facilities, and in no event shall this Agreement be construed to impose any such obligation on the Municipality.
5. In the event that the Municipality, pursuant to this Agreement, performs work of any nature or expends any funds in performance of said work for labor, use of equipment, supplies, materials, and the like, the Landowner shall reimburse the Municipality for all expenses (direct and indirect) incurred within 10 days of receipt of an invoice from the Municipality.
6. The intent and purpose of this Agreement is to ensure the proper maintenance of the on-site BMP(s) by the Landowner, provided, however, that this Agreement shall not be deemed to create or effect any additional liability on any party for damage alleged to result from or be caused by stormwater runoff.
7. The Landowner, its executors, administrators, assigns, and other successors in interest shall release the Municipality's employees and designated representatives from all damages, accidents, casualties, occurrences, or claims which might arise or be asserted against said employees and representatives from the construction, presence, existence, or maintenance of the BMP(s) by the Landowner or Municipality. In the event that a claim is asserted against the Municipality, its designated representatives, or employees, the Municipality shall promptly notify the Landowner, and the Landowner shall defend, at his own expense, any suit based on the claim. If any judgment or claims against the Municipality's employees or designated representatives shall be allowed, the Landowner shall pay all costs and expenses regarding said judgment or claim.

EROSION AND SEDIMENT CONTROL; STORMWATER MANAGEMENT

- 8. The Municipality shall inspect the BMP(s) at a minimum of once every three years to ensure their continued functioning.

This Agreement shall be recorded at the Office of the Recorder of Deeds of _____ County, Pennsylvania, and shall constitute a covenant running with the Property and/or equitable servitude and shall be binding on the Landowner, his administrators, executors, assigns, heirs, and any other successors in interest, in perpetuity.

Riparian Buffer Trail Guidelines

Introduction

Riparian buffers are used as non-structural best management practices (BMPs) for protecting and enhancing water quality. Depending on their size, location, and design, riparian buffers often supply additional environmental, economic, aesthetic, and recreational value. Passive recreational trails can be a compatible use within riparian buffers if the trails are sized and placed appropriately. The trail guidelines below are meant to supplement Section §78-37, Water Quality Requirements, and do not alter or modify the regulations set forth in Section §78-25, General Requirements. All other applicable rules and requirements should be followed, including all federal, state, permitting, and local stormwater and floodplain ordinances.

Installing a trail does not relieve a developer or municipality of the minimum buffer and vegetation requirements described in §78-42, or infiltration and peak rate controls in Sections §78-36 and §78-39. Effort shall be made to mitigate water quality and peak rate adjacent the trail structure to avoid collecting runoff in a large facility and creating a point discharge. This can be accomplished by trail-side stone filtration trenches, vegetative filter strips, small bio-retention facilities, and other mechanisms subject to site constraints and municipal engineer approval. See Figure J-1. In situations where site constraints negate the feasibility of trail-side mitigation methods, effort shall be made to collect runoff in multiple stormwater facilities for segmented portions of the trail, in place of detaining stormwater in one large facility. Level spreaders shall be constructed at facility outlets to decrease point-source discharges.

As with all trails, adequate land acquisition, easements, and/or landowner permission should be obtained in advance of any trail placement. Care should be given when designing and installing trails so as not to compromise the buffer's ability to protect water quality. Many factors such as slope, vegetation, and soil type will determine the type, size, and placement of the trail within the riparian buffer. Heavily used trails and trails with wide impervious surfaces should be set back farther from the stream edge to help mitigate the effects of any associated increase in runoff. Note: failure to comply with these guidelines (Installing a trail with inadequate setback from the stream bank) could result in increased stormwater runoff, decreased water quality, stream bank degradation, and damage to the buffer or trail.

Trail Recommendations

Location, Size, and Orientation

All trails should be a reasonable width appropriate for the site conditions. It is not recommended that the width of any paved trail exceed twenty five (25) percent of the total buffer width. All trail designs and specifications are subject to approval by the municipality.

Natural vegetation must be present throughout the buffer as described in Section 306 of the ordinance. Grassy areas should be managed as meadows or be reforested and should not be mowed as lawn in any part of the buffer. Where existing vegetation is insufficient to protect water quality, additional native species should be planted to enhance the buffer.

Paved trails, if appropriate to the site, are permitted and must be located at least twenty-five (25) feet from the top of the stream bank. In limited instances, paved trails be placed closer to a stream due to topography, or in order to accommodate passive educational and recreational activities, but must always be at least ten (10) feet from the top of the stream bank. Although this can be achieved by diverting the entire trail closer to the stream, more conservative methods should be considered, such as smaller spur trails or loop trails. These smaller trails provide access to the stream, but reduce the total traffic along the sensitive stream bank.

In rare instances where the buffer width is reduced due to zoning setback or geographical constraints, the municipality should strongly consider whether the benefits of a trail outweigh the benefits of a wider buffer.

Signage

The installation of interpretive and educational signage is strongly encouraged along the trail. Signs should point out local natural resources and educate the public on how riparian buffers protect the watershed. There should be minimum disturbance in the vegetated buffer between the trail and the stream. Therefore, all appurtenances (e.g. benches, educational signs, kiosks, fountains, etc.) should be installed on the landward side of the trail, if possible. All appurtenances shall be installed in compliance with federal, state, local, stormwater, floodplain, and other regulations and permitting requirements (e.g. anchoring, etc.)

Parking Areas

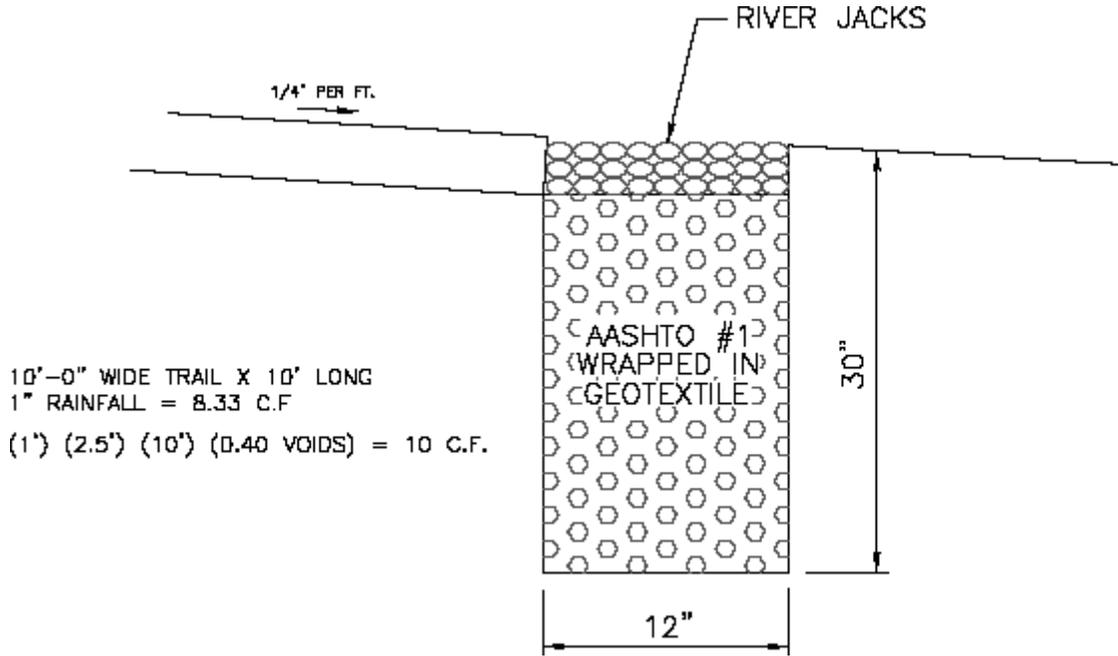

New trailheads and trail parking areas shall meet all the infiltration, rate control, and minimum setback requirements of this ordinance. Every effort should be made to coordinate trail access with existing parking areas. Any new parking areas and trailhead clearings should not encroach on the riparian buffer in any way.

Trail Maintenance

The installation and maintenance of all trails should be performed in a manner that minimizes site disturbance and prevents runoff and erosion. Soil disturbance should be avoided if possible. The removal of native trees and other native vegetation should also be kept to a minimum. If large or heavy equipment is required for trail installation, special care should be given not to damage existing trees and tree roots.

Township of Haverford

Ordinance No. P13-2024

An Ordinance of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, further amending and supplementing Ordinance No. 1960, adopted June 30, 1986, and known as “General Laws of the Township of Haverford” Chapter 175, Vehicles and Traffic.

Be it enacted and ordained by the Board of Commissioners of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, and it is hereby enacted and ordained by the authority of the same:

Section 1. § 175-83 Schedule VIII: Stop Intersections

on Woodbine Road, north, at the intersection of Washington Avenue;

on Paddock Road at the intersection of Merrybrook Drive.

Section 2. § 175-95 Schedule XX: Special Purpose Parking Zones

in front of 606 Darby Road, 1st Floor.

Section 3. Upon effective date of this ordinance, the Highway Department shall install appropriate signs in the designated section or zones giving notice of the regulations aforesaid.

Section 4. Any ordinance or part of an ordinance to the extent that it is inconsistent herewith is hereby repealed.

Adopted this this 12th day of November, 2024

Dear Mr. Burman,

Please consider for the agenda the installation of a handicapped parking space for 65 Rodmor Road at the request of the resident, Edward Butler. Mr. Butler possesses valid Pennsylvania handicapped registration plate B3242PD which is valid through 3/31/2026. This request falls under Haverford Township Ordinance 175-95 Schedule XX: Special Purpose Parking Zones.

If approved, the handicapped parking space will be installed in front of 65 Rodmor Road.

Respectfully submitted,

Sgt. T.J. Long

Township of Haverford

Resolution Number 2401-2024

American Rescue Plan Act Coronavirus Local Fiscal Recovery Fund Infrastructure Projects

Whereas, Haverford Township's direct allocation from the Coronavirus State and Local Fiscal Recovery Fund was \$19.8 million;

Whereas, on April 1, 2022, the U.S. Department of Treasury released the Final Rule covering the Coronavirus State and Local Fiscal Recovery Fund, as created and directed by the American Rescue Plan Act authorizing recipients to use funds to invest in public health improvements, economic recovery and development, services to disproportionately affected communities, infrastructure improvements and general government services, among other allowable purposes; and,

Whereas, the Board of Commissioners desires to make improvements and financial investments in Township projects and initiatives in accordance with the allowable spending structure as described by the U.S. Department of Treasury's Final Rule, as follows:

The use of an additional \$1,475,000 of the Township's American Rescue Plan Fund allocation toward the fire apparatus purchases approved at the Board of Commissioners November 13, 2023 public meeting.

Now, Therefore, be it Resolved, that the Board of Commissioners of Haverford Township hereby approves the use of funds from the Township's American Rescue Plan Fund allocation for the above referenced project.

Resolved this 12th day of November, 2024.

Resolution Number 2407-2024

Commitment to Safe Streets for All

Whereas, the Board of Commissioners of the Township of Haverford is committed to keeping residents and visitors travelling through Haverford Township safe; and

Whereas, motor vehicle related crashes in Haverford Township resulted in 7 fatal crashes and 27 serious injuries reported in the (2017 – 2022); and

Whereas, death and serious injury are preventable and should not be tolerated; and

Whereas, historically streets have been designed and constructed to maximize the level of service for motor vehicles, rather than to safely move people utilizing all modes of transportation; and

Whereas, the Safe Systems Approach takes a proactive approach and prioritizes safer roads, safer people, safer vehicles and safer speeds, and encourages design of transportation systems that can accommodate inevitable human mistakes; and

Whereas, Haverford Township has developed a Township Wide Safety Action Plan (“Safety Action Plan”) using the Safe Systems Framework.

Now, therefore be it resolved, that the Board of Commissioners of the Township of Haverford adopts the Township Wide Safety Action Plan using the Safe Systems Approach with the goal of reducing deaths and serious injuries by 50% before 2030 and achieving zero fatalities and serious injuries by 2040; and

Be it further resolve that the Board of Commissioners directs the Township Manager to implement demonstration projects set forth in the Safety Action Plan to test safety interventions on selected Township roads.

Resolved this 12th day of November, 2024.

Finance Department Memorandum

November 12, 2024

To: David R. Burman, Township Manager

From: Aimee Cuthbertson, Director of Finance/Asst Township Manager

Re: PennDot Maintenance Agreement – Mowing of Medial Strips along West Chester Pike

PennDot has requested the Township continue maintaining the medial strips along Route 3 (West Chester Pike) and presented us for a 3-year Agreement covering January 1, 2025 through December 31, 2027.

By entering this Agreement, the Township can be assured that the medial strips along this highly visible arterial highway will be maintained to our standards. At the end of each mowing season, the Township invoices PennDot according to the payment schedule in effect.

If you have any questions, please do not hesitate to contact myself or Public Works Director, Dan Mariani.

Agreement No. 3900040430
FID No. 23-6002307
SAP Vendor No. 138895

Comprehensive Maintenance Services Agreement

This Comprehensive Maintenance Services Agreement is between the Commonwealth of Pennsylvania (“Commonwealth”), acting through the Department of Transportation (“PennDOT”)

and

Haverford Township, Delaware County, (“Provider”).

Certain public highways, including bridges and approaches, have been adopted and taken over as part of the State Highway System, to be constructed, improved and maintained by PennDOT, upon the terms and conditions and subject to the limitations contained in the Limited Access Highway Law (Act of May 29, 1945, P.L. 1108), State Highway Law (Act of June 1, 1945, P.L. 1242), and the County and Municipal State Highway Law (Act of September 18, 1961, P.L. 1389), all as supplemented and amended.

PennDOT and the Provider are both public procurement units under Chapter 19 of the Commonwealth Procurement Code, 62 Pa.C.S. § 1901 *et seq.*, and are authorized to enter into agreements related to the cooperative use of supplies and services pursuant to Section 1904 of the Procurement Code, 62 Pa.C.S. § 1904.

PennDOT desires to obtain the assistance of the Provider to perform minor routine maintenance work on the state highways. The Provider has equipment, materials, and personnel available to perform activities of repair and maintenance within the Provider, for payment by PennDOT, in accordance with the terms, conditions, and provisions set forth below.

The parties, intending to be legally bound, agree as follows:

1. **General Provisions.** The Provider shall, in a good and professional manner, perform the minor routine maintenance work at the amounts set forth in Exhibit A, attached to this agreement, on the state highways located within the boundaries as listed on Exhibit B, attached to this agreement. The Provider shall use equipment owned or leased by it and its own materials and personnel to perform the work. The Provider shall be responsible for maintenance and protection of traffic at all times during the performance of its responsibilities under this agreement. Provider shall complete all work in accordance with all applicable PennDOT policies and publications, which includes, but is not limited to, Publication 408 (Highway Construction Specifications), Publication 113 (Highway Foreman Manual), and Publication 213 (Temporary Traffic Control Guidelines).

2. **Payment.** PennDOT shall pay the Provider for all authorized work performed on the items and for the prices as listed on Exhibit A, as follows:
 - a) lump sum items shall be paid on a quarterly basis; and
 - b) items performed on a unit price basis shall be paid in accordance with Section 3, below.

3. **Invoices.** The Provider may submit invoices at various intervals, but may not submit invoices more frequently than once a month. Provider shall submit invoices accompanied by a written statement certifying that the work listed in the invoice was performed properly, specifically in accordance with the specifications, policies, and procedures set forth in this agreement.

4. **Maximum Payment.** The maximum amount payable under this agreement by PennDOT to the Provider will not exceed the sum of sixteen thousand eight hundred seventy-nine dollars (\$16,879.00), without a written supplemental agreement signed by both parties.

5. **Term and Termination of Agreement.** The term of this agreement will commence on the Effective Date (as defined below) and will remain in effect until December 31, 2027, unless terminated earlier for cause or convenience, upon 30 days' written notice by either party to the other. Upon termination for cause or convenience, all obligations, except liability for claims arising from the Provider's performance and damages incurred by PennDOT shall cease. In the event of termination, PennDOT shall pay the Provider for the work performed prior to the date of termination, to the extent the work has been performed in accordance with the requirements of this agreement.

6. **Start Date.** The Provider shall either start to perform work five business days after submission of its proposed work plan, in accordance with this Section, or on another date agreed to by both the Provider and PennDOT, whichever is later. The Provider may not start work until notified by PennDOT that the agreement is fully executed and approved.
 - a) **Work Program.** Within ten days after the start date for work to be performed in accordance with this Section, and every 90 days thereafter, the Provider shall submit a proposed work program to PennDOT, addressed to PennDOT's local County Maintenance Manager, that includes language that the Provider will put PennDOT on notice when work under this agreement is being performed. The Provider may proceed to work five working days after submitting its proposed work program to PennDOT, unless notified to the contrary.
 - b) **Amended Work Program.** The Provider may, at any time during the progress of a quarterly work program, submit a supplemental or amended work program and may proceed to work five working days after submitting such amended work program, unless notified to the contrary.

- c) **Emergency Work.** If an emergency situation arises, PennDOT's local County Maintenance Manager, who shall be responsible for declaring such an emergency situation, may give verbal authorization to the Provider to perform necessary additional work. The Provider shall promptly confirm any emergency authorization in writing. Any emergency work authorized pursuant to this Section shall be limited to the categories of work for which the Provider has assumed responsibility under this agreement.
7. **Inspection of Work.** Within 60 days of completion of the work, the work performed by the Provider under this agreement shall be subject to inspection by the Secretary of PennDOT, a District Engineer for PennDOT, or a duly authorized representative of PennDOT. If, upon inspection, certain work is found not to be in conformance with the specifications, policies and procedures of PennDOT, or is not performed in a good and professional manner, the work shall be corrected or re-performed as necessary, by the Provider, at no cost to PennDOT. PennDOT shall not be obligated to conduct an inspection program; spot inspections or inspection of a particular project shall be conducted at the sole discretion of PennDOT.
8. **Resolutions and Ordinances.** The Provider shall enact or adopt such ordinances or resolutions as may be necessary to affect the purposes of this agreement.
9. **Commonwealth Standard Provisions.** The Provider shall comply with the Commonwealth provisions attached as Exhibit C.
10. **Effective Date.** The agreement will become effective when it is fully executed by the parties and all approvals required by Commonwealth contracting procedures have been obtained, as indicated by the date of the last Commonwealth signature.

11. **Amendments and Modifications.** No alterations or variations to this agreement will be valid unless made in writing and signed by the parties. Amendments to this agreement must be accomplished through a formal written document signed by the parties with the same formality as the original agreement.

12. **Severability.** The provisions of this agreement are severable. If any phrase, clause, sentence or provision of this agreement is declared to be contrary to the Constitution of Pennsylvania or of the United States or of the laws of the Commonwealth and its applicability to any government, agency, person or circumstance is held invalid, the validity of the remainder of this agreement and its applicability to any government, agency, person or circumstance will not be affected.

13. **No Waiver.** Either party may elect not to enforce its rights and remedies under this agreement in the event of a breach by other parties of any term or condition of this agreement. In any event, the failure by either party to enforce its rights and remedies under this agreement may not be construed as a waiver of any subsequent breach of the same or any other term or condition of this agreement.

14. **Independence of the Parties.** Nothing contained in this agreement is intended or may be construed to, in any respect, create or establish the relationship of partners between the Provider and PennDOT, or as constituting PennDOT as the representative or general agent of the Provider.

15. **Assignment.** This agreement may not be assigned, either in whole or in part, without PennDOT's written consent.

16. **No Third-Party Beneficiary Rights.** This agreement does not create or intend to confer any rights in or on persons or entities not a party to this agreement.

17. **Notices.** All notices and reports arising out of, or from, the provisions of this agreement must be in writing and given to the parties at the address provided under this agreement, either by regular mail, e-mail, or delivery in person:

If to PennDOT:

Address: 7000 Geerdes Boulevard

King of Prussia, PA 19406

Email: owilcox@pa.gov

If to the Provider:

Address: 1014 Darby Road

Havertown, PA 19083

Email: acuthbertson@havtwp.org

or to such other person or address as the parties may provide to each other in writing.

18. **Force Majeure.** Neither party will be liable for failure to perform under this agreement if a failure to perform arises out of causes beyond the control and without the fault or negligence of the nonperforming party. Causes may include, but are not limited to, acts of God or the public enemy, fires, floods, epidemics, quarantine restrictions, freight embargoes, and unusually severe weather. This provision will become effective only if the party failing to perform immediately notifies the other party of the extent and nature of the problem, limits delay in performance to that required by the event, and takes all reasonable steps to minimize delays. This provision will not be effective unless the failure to perform

is beyond the control and without the fault or negligence of the nonperforming party.

19. **Integration and Merger.** The parties intend this statement of their agreement to constitute the complete, exclusive, and fully integrated statement of their agreement. As such, it is the sole expression of their agreement, and they are not bound by any other agreements of whatsoever kind or nature. The parties also intend that this agreement may not be supplemented, explained, or interpreted by any evidence of trade usage or course of dealing. In entering this agreement, the parties did not rely upon oral or written statements or representations not contained within the document itself.

20. **Counterparts.** This agreement may be executed in counterparts, each of which is deemed an original and has the full force and effect as an original, but all of which constitute one and the same instrument.

[The remainder of this page is intentionally left blank.]

The parties have executed this agreement to be effective as of the date of the last signature affixed below.

(1) Plus materials if the Department does not supply them

Exhibit B

Agreement # 3900040430

Municipality: Haverford Township

County: Delaware

Mowing

Mowing will be performed along the medians of the state routes listed below, consisting of 8.5 acres, in Haverford Township for the specified number of cycles.

SR 0003 – West Chester Pike from Lawrence Road to Township Line Road

SR 2005 – Darby Road from West Chester Pike to Sproul Road

SR 1006 – Glendale Road at Warrior Road

SR 1018 – Ardmore Avenue at Haverford Avenue

SR 1001 – Karakung Driver from Haverford Road to Manoa Road

8.5 Acres per cycle x six (6) cycles per year = 51.00 Acres

51.00 Acres x \$110.32 per Acre = **\$5,626.32**

(Rate will be in effect for duration of agreement)

Document the Mowing Cycles and Invoice the Department at the completion of the final mowing cycle of each year.

Commonwealth Standard Terms and Conditions (Revised - 10/1/2023)

1. DEFINITIONS.

Capitalized terms used in these Commonwealth standard terms and conditions that are not otherwise defined in these provisions have the meanings specified in the contract to which it is attached.

2. ENHANCED MINIMUM WAGE.

[Intentionally Omitted.]

3. INDEMNIFICATION.

- a. **Contractor Obligations.** The Contractor shall indemnify the Commonwealth against all third-party claims, suits, demands, losses, damages, costs, and expenses, including without limitation, litigation expenses, attorneys' fees, and liabilities, arising out of or in connection with any activities performed by the Contractor or its employees and agents that are related to this contract, as determined by the Commonwealth in its sole discretion.
- b. **Commonwealth Attorneys Act.** The Commonwealth shall provide the Contractor with prompt notice of any claim or suit of which it learns. Pursuant to the Commonwealth Attorneys Act (71 P.S. Section 732-101, et seq.), the Office of Attorney General (OAG) has the sole authority to represent the Commonwealth in actions brought against the Commonwealth. The OAG may, however, in its sole discretion and under any terms as it deems appropriate, delegate its right of defense. If OAG delegates the defense to the Contractor, the Commonwealth will cooperate with all reasonable requests of Contractor made in the defense of such suits.
- c. **Settlement.** Notwithstanding the above, neither party may enter into a settlement of any claim or suit without the other party's written consent, which will not be unreasonably withheld. The Commonwealth may, in its sole discretion, allow the Contractor to control the defense and any related settlement negotiations.

4. NONDISCRIMINATION/SEXUAL HARASSMENT.

- a. **Representations.** The Contractor represents that it is presently in compliance with and will remain in compliance with all applicable federal, state, and local laws, regulations, and policies relating to nondiscrimination and sexual harassment for the term of the contract. The Contractor shall, upon request and within the time periods requested by the Commonwealth, furnish all necessary employment documents and records, including EEO-1 reports, and permit access to its books, records, and accounts by the Commonwealth for the purpose of ascertaining compliance with provisions of this Nondiscrimination/Sexual Harassment Clause.
- b. **Nondiscrimination/Sexual Harassment Obligations.** The Contractor shall not:

- i. in any manner discriminate in the hiring of any employee(s) for the manufacture of supplies, performance of work, or any other activity required under this contract or any subcontract, by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of the Pennsylvania Human Relations Act (“PHRA”) and applicable federal laws, against any citizen of this Commonwealth who is qualified and available to perform the work to which the employment relates.
 - ii. in any manner discriminate by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of the PHRA and applicable federal laws, against or intimidate any employee involved in the manufacture of supplies, the performance of work, or any other activity required under this contract.
 - iii. in any manner discriminate by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of the PHRA and applicable federal laws, in the provision of services under this contract.
 - iv. in any manner discriminate by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of PHRA and applicable federal laws, against any subcontractor or supplier who is qualified to perform the work to which this contract relates.
 - v. in any manner discriminate against employees by reason of participation in or decision to refrain from participating in labor activities protected under the Public Employee Relations Act, Pennsylvania Labor Relations Act or National Labor Relations Act, as applicable and to the extent determined by entities charged with such Acts’ enforcement and shall comply with any provision of law establishing organizations as employees’ exclusive representatives.
- c. **Establishment of Contractor Policy.** The Contractor shall establish and maintain a written nondiscrimination and sexual harassment policy that complies with the applicable law and these Nondiscrimination/Sexual Harassment provisions and shall inform its employees in writing of the policy. The policy must contain a provision that states that sexual harassment will not be tolerated and employees who practice it will be disciplined. For the entire period of the contract, the Contractor shall: (1) post its written nondiscrimination and sexual harassment policy or these Nondiscrimination/Sexual Harassment provisions conspicuously in easily accessible and well-lighted places customarily frequented by employees at or near where the contracted services are performed; or (2) provide electronic notice of the policy or this clause to its employees not less than annually.
- d. **Notification of Violations.** The Contractor’s obligations pursuant to these provisions are ongoing from the effective date and through the termination date of the contract. Accordingly, the Contractor shall notify the Commonwealth if, at any time during the term of this contract, it becomes aware of any actions or occurrences that would result in violation of these provisions.
- e. **Cancellation or Termination of Contract.** The Commonwealth may cancel or terminate this contract and all money due or to become due under this contract may be forfeited for

a violation of the terms and conditions of these Nondiscrimination/Sexual Harassment provisions. In addition, the agency may proceed with debarment or suspension and may place the Contractor in the Contractor Responsibility File.

- f. **Subcontracts.** The Contractor shall include these Nondiscrimination/Sexual Harassment provisions in its contracts with all subcontractors providing goods or services under this contract. The incorporation of these provisions in the Contractor's subcontracts does not create privity of contract between the Commonwealth and any subcontractor, and no third-party beneficiaries are created by those provisions. If the Contractor becomes aware of a subcontractor's violation of this clause, the Contractor shall use its best efforts to ensure the subcontractor's compliance with these provisions.

5. CONTRACTOR INTEGRITY.

- a. **Definitions.** For purposes of these Contractor Integrity Provisions, the following definitions apply:
- i. "Affiliate" means two or more entities where (a) a parent entity owns more than 50% of the voting stock of each of the entities; (b) a common shareholder or group of shareholders owns more than 50% of the voting stock of each of the entities; or (c) the entities have a common proprietor or general partner.
 - ii. "Contractor" means the individual or entity, that has entered into this contract with the Commonwealth.
 - iii. "Contractor Related Parties" means any Affiliates of the Contractor and the Contractor's executive officers, Pennsylvania officers and directors, or owners of five percent or more interest in the Contractor.
 - iv. "Financial Interest" means ownership of more than a five percent interest in any business or holding a position as an officer, director, trustee, partner, employee, or holding any position of management.
 - v. "Gratuity" means tendering, giving, or providing anything of more than nominal monetary value including, but not limited to, cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, services, employment, or contracts of any kind. The exceptions set forth in the [Governor's Code of Conduct, Executive Order 1980-18](#), as may be amended, 4 Pa. Code §7.153(b), apply.
 - vi. "Non-bid Basis" means a contract awarded or executed by the Commonwealth with Contractor without seeking bids or proposals from any other potential bidder or offeror.
- b. **Representations and Warranties.**
- i. **Contractor Representation and Warranties.** The Contractor represents, to the best of its knowledge and belief, and warrants that within the last five years neither the Contractor nor Contractor Related Parties have:

1. been indicted or convicted of a crime involving moral turpitude or business honesty or integrity in any jurisdiction;
 2. been suspended, debarred, or otherwise disqualified from entering into any contract with any governmental agency;
 3. had any business license or professional license suspended or revoked;
 4. had any sanction or finding of fact imposed as a result of a judicial or administrative proceeding related to fraud, extortion, bribery, bid rigging, embezzlement, misrepresentation or anti-trust; and
 5. been, and are not currently, the subject of a criminal investigation by any federal, state or local prosecuting or investigative agency or civil anti-trust investigation by any federal, state, or local prosecuting or investigative agency.
- ii. **Contractor Explanation.** If the Contractor cannot make the representations and warranties set forth above at the time of its submission of its bid or proposal or if this contract is awarded on a non-bid basis at the time of the execution of the contract, the Contractor shall submit a written explanation outlining the reasons why it cannot make those representations and warranties. The Commonwealth may, based on its evaluation of the explanation provided, determine whether it is in the Commonwealth's best interest to execute the contract.
- iii. **Further Representations.** By submitting any bills, invoices, or requests for payment pursuant to this contract, the Contractor further represents that it has not violated any of these Contractor Integrity Provisions during the term of the contract.
- iv. **Notice.** The Contractor shall immediately notify the Commonwealth, in writing, if at any time during the term of the contract it becomes aware of any event that would cause the Contractor's certification or explanation to change. The Contractor acknowledges that the Commonwealth may, in its sole discretion, terminate the contract for cause if it learns that any of the certifications made in these provisions are currently false or misleading due to intervening factual circumstances or were false or misleading or should have been known to be false or misleading when entering into the contract.
- c. **Contractor Responsibilities.** During the term of this contract, the Contractor shall:
- i. maintain the highest standards of honesty and integrity.
 - ii. take no action in violation of any applicable laws, regulations, or other requirements applicable to the Contractor that govern Commonwealth contracting and procurement.
 - iii. establish and implement a written business integrity policy that includes, at a minimum, the requirements of these provisions as they relate to the Contractor's activity with the Commonwealth and Commonwealth employees and ensure that its employees comply with the policy.
 - iv. not accept, agree to give, offer, confer, agree to confer, or promise to confer, directly or indirectly, any gratuity or pecuniary benefit to any person, or to influence or attempt to influence any person in violation of any federal or state

law, regulation, executive order, statement of policy, management directive, or bulletin applicable to the provision of goods or services under this contract.

- v. not have a financial interest in any other contractor, subcontractor, or supplier providing services, labor, or material under this contract, unless the financial interest is disclosed to the Commonwealth in writing and the Commonwealth consents to Contractor's financial interest. The Contractor must disclose the financial interest to the Commonwealth at the time of bid or proposal submission, or if no bids or proposals are solicited, no later than the date the Contractor signs the contract. The Commonwealth shall be deemed to have consented if the required disclosure is received and all of the required Commonwealth signatures are affixed.
 - vi. comply with the requirements of the Lobbying Disclosure Act (65 Pa.C.S. §13A01 et seq.) regardless of the method of award.
 - vii. comply with the requirements of Section 1641 of the Pennsylvania Election Code (25 P.S. §3260a) if this contract was awarded on a Non-bid Basis.
 - viii. immediately notify the Commonwealth contracting officer or the Office of the State Inspector General, in writing, when the Contractor has reason to believe that any breach of ethical standards as set forth in law, the Governor's Code of Conduct, or these Contractor Integrity Provisions has occurred or may occur, including, but not limited to, contact by a Commonwealth officer or employee, which, if acted upon, would violate the ethical standards.
- d. **Investigations.** If a State Inspector General investigation is initiated, the Contractor shall:
- i. reimburse the Commonwealth for the reasonable costs of investigation incurred by the Office of the State Inspector General for investigations of the Contractor's compliance with the terms of this or any other agreement between the Contractor and the Commonwealth that results in the suspension or debarment of the Contractor. The Contractor shall not be responsible for investigative costs for investigations that do not result in the Contractor's suspension or debarment.
 - ii. cooperate with the Office of the State Inspector General in its investigation of any alleged Commonwealth agency or employee breach of ethical standards and any alleged Contractor non-compliance with these Contractor Integrity Provisions and make identified Contractor employees available for interviews at reasonable times and places.
 - iii. upon the inquiry or request of an Inspector General, provide, or if appropriate, make promptly available for inspection or copying, any information of any type or form deemed relevant by the Office of the State Inspector General to Contractor's integrity and compliance with these provisions. This information may include, but is not be limited to, Contractor's business or financial records, documents or files of any type or form that refer to or concern this contract.
- e. **Termination.** For violation of any of these Contractor Integrity Provisions, the Commonwealth may terminate this and any other contract with the Contractor, claim liquidated damages in an amount equal to the value of anything received in breach of

these Contractor Integrity provisions, claim damages for all additional costs and expenses incurred in obtaining another contractor to complete performance under this contract, and debar and suspend the Contractor from doing business with the Commonwealth. These rights and remedies are cumulative, and the use or non-use of any one does not preclude the use of all or any other. These rights and remedies are in addition to those the Commonwealth may have under law, statute, regulation, or contract.

- f. **Subcontracts.** The Contractor shall include these Contractor Integrity Provisions in its contracts with all subcontractors providing goods or services under this contract. The incorporation of this provision in the Contractor's subcontracts does not create privity of contract between the Commonwealth and any subcontractor, and no third-party beneficiaries are created by the inclusion of these provisions. If the Contractor becomes aware of a subcontractor's violation of these provisions, the Contractor shall use its best efforts to ensure the subcontractor's compliance with these provisions.

6. CONTRACTOR RESPONSIBILITY.

- a. **Definition.** For the purpose of these provisions, the term "Contractor" means as any person, including, but not limited to, a bidder, offeror, loan recipient, grantee or lessor, who has furnished or performed or seeks to furnish or perform, goods, supplies, services, leased space, construction or other activity, under a contract, grant, lease, purchase order or reimbursement agreement with the Commonwealth. The term also includes a permittee, licensee, or any agency, political subdivision, instrumentality, public authority, or other public entity in the Commonwealth.
- b. **Contractor Representations.**
- i. The Contractor represents for itself and its subcontractors required to be disclosed or approved by the Commonwealth, that as of the date of its execution of this contract, that neither the Contractor, nor any such subcontractors, are under suspension or debarment by the Commonwealth or any governmental entity, instrumentality, or authority and, if the Contractor cannot make this representation, the Contractor shall submit, along with its contract, a written explanation of why such certification cannot be made.
 - ii. The Contractor represents that as of the date of its execution of this contract it has no tax liabilities or other Commonwealth obligations, or has filed a timely administrative or judicial appeal if such liabilities or obligations exist, or is subject to a duly approved deferred payment plan if such liabilities exist.
- c. **Notification.** The Contractor shall notify the Commonwealth if, at any time during the term of this contract, it becomes delinquent in the payment of taxes, or other Commonwealth obligations, or if it or, to the best of its knowledge, any of its subcontractors are suspended or debarred by the Commonwealth, the federal government, or any other state or governmental entity. The Contractor shall provide this notification within 15 days of the date of suspension or debarment.
- d. **Default.** The Contractor's failure to notify the Commonwealth of its suspension or debarment by the Commonwealth, any other state, or the federal government constitutes an event of default of the contract with the Commonwealth.

- e. **Reimbursement.** The Contractor shall reimburse the Commonwealth for the reasonable costs of investigation incurred by the Office of State Inspector General for investigations of the Contractor's compliance with the terms of this contract or any other agreement between the Contractor and the Commonwealth that results in the suspension or debarment of the Contractor. These costs include, but are not limited to, salaries of investigators, including overtime; travel and lodging expenses; and expert witness and documentary fees. The Contractor shall not be responsible for investigative costs for investigations that do not result in the Contractor's suspension or debarment.
- f. **Suspension and Debarment List.** The Contractor may obtain a current list of suspended and debarred Commonwealth contractors by visiting the eMarketplace website at <http://www.emarketplace.state.pa.us> and clicking the Debarment list tab.

7. AMERICANS WITH DISABILITIES ACT.

- a. **No Exclusion.** Pursuant to the Americans with Disabilities Act, 42 U.S. Code § 12101, et seq., no qualified individual with a disability may, on the basis of the disability, be excluded from participation in this contract or from activities provided for under this contract.
- b. **Compliance.** For all goods and services provided pursuant to this contract, the Contractor shall comply with Title II of the Americans with Disabilities Act, the "General Prohibitions Against Discrimination" set forth in 28 C. F. R. § 35.130, and all other regulations promulgated under Title II of the Americans with Disabilities Act that apply to state and local governments.
- c. **Indemnification.** The Contractor shall indemnify the Commonwealth against all third-party claims, suits, demands, losses, damages, costs, and expenses, including without limitation, litigation expenses, attorneys' fees, and liabilities, arising out of or in connection with the Contractor's failure or its employee's or agent's failure to comply with the provisions of paragraph a, as determined by the Commonwealth in its sole discretion.

8. APPLICABLE LAW AND FORUM.

This contract is governed by and must be interpreted and enforced in accordance with the laws of the Commonwealth of Pennsylvania (without regard to any conflict of laws provisions) and the decisions of the Pennsylvania courts. The Contractor consents to the jurisdiction of any court of the Commonwealth of Pennsylvania and any federal courts in Pennsylvania, and waives any claim or defense that such forum is not convenient or proper. Any Pennsylvania court or tribunal has in personam jurisdiction over the Contractor, and the Contractor consents to service of process in any manner authorized by Pennsylvania law. This provision may not be interpreted as a waiver or limitation of the Commonwealth's rights or defenses.

9. RIGHT TO KNOW LAW.

- a. **Applicability.** The Pennsylvania Right-to-Know Law, 65 P.S. §§ 67.101-3104, ("RTKL") applies to this contract.

- b. **Contractor Assistance.** If the Commonwealth needs the Contractor's assistance in any matter arising out of the RTKL related to this contract, the Commonwealth shall notify the Contractor that it requires the Contractor's assistance, and the Contractor shall provide to the Commonwealth:
 - i. access to, and copies of, any document or information in the Contractor's possession (Requested Information) arising out of this contract that the Commonwealth reasonably believes is a public record under the RTKL, within ten calendar days after receipt of written notification; and
 - ii. any other assistance as the Commonwealth may reasonably request, in order to comply with the RTKL with respect to this contract.
- c. **Trade Secret or Confidential Proprietary Information.** If the Contractor considers the Requested Information to include a Trade Secret or Confidential Proprietary Information, as those terms are defined by the RTKL, or other information that the Contractor considers exempt from production under the RTKL, the Contractor shall notify the Commonwealth and provide, within seven calendar days of receipt of the written notice a written statement, signed by a representative of the Contractor, that explains why the requested material is exempt from public disclosure under the RTKL. If the Commonwealth determines that the Requested Information is clearly not exempt from disclosure, the Contractor shall provide the Requested Information to the Commonwealth within five business days of receipt of written notice of the Commonwealth's determination.
- d. **Reimbursement.**
 - i. **Commonwealth Reimbursement.** If the Contractor fails to provide the Requested Information and the Commonwealth is ordered to produce the Requested Information, the Contractor shall reimburse the Commonwealth for any damages, penalties, or costs that the Commonwealth may incur as a result of the Contractor's failure, including any statutory damages assessed against the Commonwealth.
 - ii. **Contractor Reimbursement.** The Commonwealth will reimburse the Contractor for any costs that the Contractor incurs as a direct result of complying with these provisions only to the extent allowed under the fee schedule established by the Office of Open Records or as otherwise provided by the RTKL.
- e. **Challenges of Commonwealth Release.** The Contractor may file a legal challenge to any Commonwealth decision to release a record to the public with the Office of Open Records, or in the Pennsylvania Courts, however, the Contractor shall reimburse the Commonwealth for any legal expenses incurred by the Commonwealth as a result of the challenge, including any damages, penalties or costs that the Commonwealth may incur as a result of the Contractor's legal challenge, regardless of the outcome.
- f. **Waiver.** As between the parties, the Contractor waives all rights or remedies that may be available to it as a result of the Commonwealth's disclosure of Requested Information pursuant to the RTKL.

- g. **Survival.** The Contractor's obligations contained in this Section survive the termination or expiration of this contract.

10. OFFSET.

The Commonwealth may set off the amount of any state tax liability or other obligation of the Contractor, or its subsidiaries, owed to the Commonwealth against any payments due the Contractor under any contract between the Commonwealth and Contractor.

11. AUTOMATED CLEARING HOUSE (ACH) PAYMENTS.

- a. **Payment Method.** The Commonwealth shall make contract payments through the Automated Clearing House (ACH). Within 10 days of award of the contract or purchase order, the Contractor must submit or must have submitted its ACH information within its user profile in the Commonwealth's procurement system (SRM).
- b. **Unique Identifier.** The Contractor must submit a unique invoice number with each invoice submitted. The Commonwealth shall list the Contractor's unique invoice number on its ACH remittance advice to enable the Contractor to properly apply the state agency's payment to the invoice submitted.
- c. **ACH Information in SRM.** The Contractor shall ensure that the ACH information contained in SRM is accurate and complete. The Contractor's failure to maintain accurate and complete information may result in delays in payments.

12. WORKER PROTECTION AND INVESTMENT.

The Contractor shall comply with all applicable Pennsylvania state labor laws and worker safety laws including, but not limited to, the following:

- a. Construction Workplace Misclassification Act;
- b. Employment of Minors Child Labor Act;
- c. Minimum Wage Act;
- d. Prevailing Wage Act;
- e. Equal Pay Law;
- f. Employer to Pay Employment Medical Examination Fee Act;
- g. Seasonal Farm Labor Act;
- h. Wage Payment and Collection Law;
- i. Industrial Homework Law;
- j. Construction Industry Employee Verification Act;
- k. Act 102: Prohibition on Excessive Overtime in Healthcare;
- l. Apprenticeship and Training Act; and

m. Inspection of Employment Records Law.

Township of Haverford

Resolution Number 2415-2024

Announcement of Public Hearing for proposed amendments to Chapter 182, Zoning

Whereas, the Board of Commissioners of Haverford Township desires to keep its citizens and business interests informed as to the status of proposed amendments to the Township's code, known as the General Laws of the Township of Haverford.

Whereas, proposed amendments of the Township's Code amending and supplementing Ordinance No. 1960, Known as the "General Laws of the Township of Haverford", adopted June 30, 1986, at Chapter 182, Zoning, Section 182-106.B to provide for new definitions related to buildings, structures and lots; Section 182-711 related to accessory building and accessory structure regulations; and Section 182-802 related to nonconforming uses, buildings and structures.

Now, therefore, be it Resolved by the Board of Commissioners of the Township of Haverford, County of Delaware, and Commonwealth of Pennsylvania that a public hearing shall be held before the Board of Commissioners on Monday, December 9, 2024, at 6:15 PM, in the Commissioners Meeting Room, 1014 Darby Road, Havertown, Pennsylvania.

Resolved this 12th day of November, 2024

Township of Haverford

By: C. Lawrence Holmes, Esq., President

Attest: David R. Burman, Township Manager/Secretary

Township of Haverford

Resolution Number 2416-2024

A Resolution Authorizing Application to the 2024 PECO Green Region Open Space Program Bonus Round for the Haverford Township Building Solar Installation Project

Whereas, the Township of Haverford desires to undertake the Haverford Township Building Solar Installation project; and,

Whereas, the Township desires to apply to the 2024 PECO Green Region Open Space Program Bonus Round for a grant for the purpose of carrying out this project; and,

Whereas, the Township has received and understands the 2024 PECO Green Region Open Space Program Bonus Round Guidelines.

Now, therefore, be it resolved, that the Board of Commissioners of Haverford Township hereby approves this project and authorizes application to the PECO Green Region Open Space Program Bonus Round in the amount of \$50,000; and, if the application is granted, the Township commits to covering the remaining expenses over and above \$50,000 to ensure a successful project.

Resolved this 12th day of November, 2024.

Township of Haverford

Resolution Number 2417-2024

American Rescue Plan Act Coronavirus Local Fiscal Recovery Fund Sanitary Sewer and Storm Sewer Infrastructure Projects

Whereas, Haverford Township's direct allocation from the Coronavirus State and Local Fiscal Recovery Fund was \$19.8 million;

Whereas, on April 1, 2022, the U.S. Department of Treasury released the Final Rule covering the Coronavirus State and Local Fiscal Recovery Fund, as created and directed by the American Rescue Plan Act authorizing recipients to use funds to invest in public health improvements, economic recovery and development, services to disproportionately affected communities, infrastructure improvements and general government services, among other allowable purposes; and,

Whereas, the Board of Commissioners desires to make improvements and financial investments in Township projects and initiatives in accordance with the allowable spending structure as described by the U.S. Department of Treasury's Final Rule, as follows:

Reimbursement to the Haverford Township General Fund in the amount of \$9,240 for emergency storm sewer repairs at the intersection of Eagle & Hollis Roads;

Reimbursement to the Haverford Township Sanitary Sewer Fund in the amount of \$36,500 for emergency sanitary sewer repairs at Township Line Road & West Chester Pike, and in the amount of \$35,023.53 for video and cleaning of sanitary lines in and around the 7th Ward.

Now, Therefore, be it Resolved, that the Board of Commissioners of Haverford Township hereby approves the use of funds from the Township's American Rescue Plan Fund allocation for the above referenced projects and initiatives.

Resolved this 12th day of November, 2024.

Township of Haverford

By: C. Lawrence Holmes, Esq., President

Attest: David R. Burman, Township Manager/Secretary

Township of Haverford

Resolution Number 2418-2024

Resolution for Preliminary/Final Land Development Plan approval for the Quadrangle for a building addition to Art Studio Building at 3300 Darby Road, Havertown

Whereas, Act 247 of 1968, the Pennsylvania Municipalities Planning Code, empowers the Haverford Township Board of Commissioners to regulate subdivisions and land developments within the Township; and

Whereas, Haverford Township desires orderly and appropriate land use and development to protect the health, safety, and welfare of residents; and

Whereas, HCP MA3 Pennsylvania, LP, owner of the property generally known as Quadrangle (“Applicant”) desires to develop the Art Studio Building located at 3300 Darby Road, Havertown, PA, Delaware County, known as D.C. Folio No. 22-04-00180-00 (“Property”) to add 938 square feet of building addition and related improvements as shown on the Plan (identified below)(“Project”). The Property is zoned R-1 Residential District and is located in the 4th Ward; and

Whereas, the Preliminary / Final Land Development plan submitted for the Project was prepared by Site Engineering Concepts, LLC, Southeastern, PA, dated August 29, 2024 coupled with requests for certain waivers/modifications from provisions of the Haverford Township Subdivision and Land Development Ordinance (Chapter 160 of the Haverford Township Code (“Code”)) (“SLDO”); and

Whereas, the Historical Commission of Haverford Township, at the public meeting of Monday, September 16, 2024, voted to recommend approval of the Plan based on the revised architectural plans for the Project submitted to the Township on August 22, 2024; and

Whereas, the Shade Tree Commission of Haverford Township, at the public meeting of Monday, September 23, 2024, voted to recommend approval of the Plan subject to certain revisions of the landscaping plans for the Project, which revisions have been submitted to the Township; and

Whereas, Pennoni Associates, the Township Engineer, issued a review letter for the Project dated September 26, 2024; and

Whereas, the Planning Commission of Haverford Township, at the public meeting of Thursday, October 10, 2024, voted to recommend approval of the Plan subject to the comments contained within the September 26, 2024 review letter, and prepared by Pennoni Associates;

and

Whereas, Applicant submitted revised plans for the Project prepared by Site Engineering Concepts, LLC, Southeastern, PA, dated August 29, 2024, revised (No. 1) October 16, 2024 (“Plan”) and a response letter to the aforesaid September 26, 2024 Pennoni review letter; and

Whereas, Pennoni Associates, the Township Engineer, issued a revised review letter for the Project dated September 26, 2024, revised November 2, 2024 (“Revised Review Letter”). The Revised Review Letter included new comments referencing the curbing and sidewalk provisions of Code sections 160-5.B.(4)[a] and [c]; and

Whereas, Applicant submitted a supplemental waiver/modification request based on the new comments in the Revised Review Letter; and

Whereas, said Plan has been submitted to the Board of Commissioners of the Township of Haverford for consideration in accordance with the Pennsylvania Municipalities Planning Code and pursuant to the Haverford Township Subdivision and Land Development Regulations, Ordinance 1960, Chapter 160, Sections 4. A and B.

Now, Therefore, be it Resolved by the Board of Commissioners of the Township of Haverford that the Plan is APPROVED subject to the following conditions:

A. Conditions of Plan Approval.

1. The Applicant must ensure that the Plan address any outstanding comments in the Revised Review Letter dated September 26, 2024, revised November 2, 2024 prepared by Pennoni Associates. Further, the Applicant shall comply with future review letters related to future Plan revisions made in response to prior comments to the reasonable satisfaction of the Township Engineer.
2. A subsequent recordable final plan shall be submitted for internal Township review that addresses all Township review letter requests, further Plan details and clarifications, or revisions based upon the terms of this Resolution.
3. Applicant must comply with any applicable requirements of the Delaware County Conservation District, Pennsylvania Department of Environmental Protection, United States Environmental Protection Agency, or any other necessary outside agency, and obtain any necessary planning modules, approvals, or permits from such agencies, or enter into any required agreements such agencies require, before the Plan is recorded.
4. The conditions of this Resolution must be satisfied, and all fees and costs set forth in this Resolution shall be paid, before the issuance of a building permit for the Project.
5. Prior to recording the Plan, the Applicant shall execute a Land Development and Financial Security Agreement to guarantee the installation of all required public improvements associated with the Project (“Improvements”) on a form drafted by the

Township Solicitor. Financial Security shall take the form of a cash escrow held by the Township, an irrevocable standby letter of credit in a form acceptable to the Township Solicitor, or a tri-party agreement in a form acceptable to the Township Solicitor. If Applicant were to post financial security in the form of a bond, the Township Solicitor shall have the unconditional right to review the bond and must approve the conditions and language of the bond. Further, the bond shall be issued by a "AAA" rate surety, or its equivalent, qualified to do business in Pennsylvania, and shall contain language stating that the bond is to be payable upon demand, absolutely, and unconditionally, and if payment is not made, that the bonding company shall be responsible for reasonable attorneys' fees and costs that are incurred to collect on the bond, plus interest at the annual rate of twelve (12%) percent, for so long as the bond remains unpaid. A bond or letter of credit is required to automatically renew annually until the Improvements detailed on the Plans are completed, any maintenance periods have passed, and the final release is issued by the Township, subject to partial releases being permitted in accordance with Pennsylvania Municipalities Planning Code. To ensure automatic renewal, a bond or letter of credit shall include a 90-day Evergreen Clause in a form acceptable to the Township Solicitor.

6. Financial security shall be posted in the amount of 110% of the total cost of the Improvements. The Applicant agrees that the Improvements shall include, but shall not be limited to, streets, parking areas, striping, drive aisles, curbs, water mains, sanitary sewer pipes, manholes and appurtenances thereto, stormwater facilities, rain gardens and appurtenances, grading, erosion and sediment controls, public lighting, required trees, shrubs, plantings and landscape buffering, monuments, pins, sidewalks, or other public improvements designated by the Township Engineer. For a period not less than 18 months after Township Engineer approval of the Improvements, financial security shall remain posted in the amount of 15% of the total cost of the Improvements that are to be dedicated to the Township, if any.
7. All outstanding Township fees, including review and recording costs and fees, Township Engineering fees, and Township legal fees, and any other professional fees associated with the review and approval of the application and Plan shall be paid in full before the Plan is recorded, in accordance with the Pennsylvania Municipalities Planning Code.
8. Prior to recording the Plan, and in addition to the financial security posted for the Project, Applicant shall deposit with the Township or otherwise establish a reasonable sum of monies with the Township, in an amount to be reasonably determined by the Township Engineer, as to be further described in the Land Development and Financial Security Agreement, for the reimbursement of the Township's reasonable engineering, inspection, legal, and related administrative costs and expenses related to the further reviews, inspections, and development of the Project, in accordance with the Pennsylvania Municipalities Planning Code.

9. A note shall be included on the Plan listing any waivers or modifications granted by the Board of Commissioners.
10. The terms and conditions of this Resolution shall run with the land and shall apply to any assignee, transferee, or other successor in interest in the Property or the development of the Project. This Resolution or a memorandum of this Resolution may be recorded against the Property by the Township, or a subdivided portion of the Property, at the Township's sole discretion, to which the then-current landowner of the Property shall be deemed to have consented to such recording. Regardless of whether this Resolution is recorded, the Township shall have the right to enforce any violations of the conditions of this Resolution as a violation of the Township's Subdivision of Land Chapter and/or pursuant to Section 616.1 of the Pennsylvania Municipalities Planning Code.

B. Waivers. The Applicant has requested the following waivers from the SLDO pursuant to the written waiver/modification requests. An indication that a waiver/modification was granted reflects that the Township has determined that the Applicant has sufficiently established that the literal enforcement of the provision waived to be unreasonable, will cause undue hardship, or an alternate standard can provide equal or better results, and that the waiver/modification is not contrary to the public interest or otherwise contrary to the purpose and intent of the Township Code, as demonstrated and explained by appearances of the Applicant before the Board at public meetings and through the waiver request letter(s) submitted. A lack of indication of the decision on the waiver/modification after the Township has executed this Resolution shall be interpreted to mean that the waiver/modification was granted, unless the minutes of the associated Township meeting reflect otherwise:

1. From Section 160-3.B to request a waiver to submit a final plan simultaneously with a final plan. The waiver is hereby:

Granted _____ Denied _____

2. From Section 160-4.E(5)[e](3) to not provide the required plan details within 200 feet of the site. The waiver is hereby:

Granted _____ Denied _____

3. From Section 160-4.E(5)[e](4) to not provide the required plan details within 400 feet of the site. The waiver is hereby:

Granted _____ Denied _____

4. From Section 160-4.E(5)(i) to not provide the required Traffic Study. The waiver is hereby:

Granted _____ Denied _____

5. Partial waiver from Section 160-4.E(5)(g) to not provide the required plan details with exception of 160-4.E(5)(g)[4] and 160-4.E(5)(g)[7]. The waiver is hereby:

Granted _____ Denied _____

6. Partial waiver from Section 160-4.F(2) to not to not provide the required plan details with exception of 160-4.F(2)(a) and 160-4.F(2)(b). The waiver is hereby:

Granted _____ Denied _____

7. From Section 160-5.B.(4)[a] to not install curbing along streets. The waiver is hereby:

Granted _____ Denied _____

8. From Section 160-5.B.(4)[c] to not install sidewalks along streets. The waiver is hereby:

Granted _____ Denied _____

TREE REMOVAL AND LANDSCAPE PLAN
SEE THE ACCOMPANYING APRIARY STUDIO PERMIT PLAN SET, REVISION #1, DATED OCTOBER 10, 2024 FOR TREE PRESERVATION PLAN, LANDSCAPE PLAN AND DETAILS.

PROJECT NARRATIVE
THE APPLICANT PROPOSES TO CONSTRUCT A SMALL ADDITION (938 SF) TO AN EXISTING ART STUDIO BUILDING WITHIN THE EXISTING CAMPUS. THERE WILL BE NO CHANGE IN USE, UNIT DENSITY OR OCCUPANCY ASSOCIATED WITH THIS ADDITION. APPROXIMATELY 950 SF OF NEW IMPERVIOUS IS PROPOSED. THE LIMIT OF DISTURBANCE IS APPROXIMATELY 3,082 SF. THE STORMWATER ORDINANCE DOES NOT REQUIRE CONTROLS FOR PROJECTS WITH LESS THAN 1,000 SF OF NEW IMPERVIOUS AND 5,000 SF OF DISTURBANCE. DURING CONSTRUCTION EROSION AND SEDIMENT CONTROL IS ACCOMPLISHED THROUGH LIMITED DISTURBANCE, IMMEDIATE STABILIZATION, AND SILT BARRIERS.

**RE: Preliminary/Final Plan
The Quadrangle- Art Studio Addition**

Dear Ms. Jilozian

As requested, we have reviewed the following prepared by Site Engineering Concepts, LLC in connection with the referenced property:

- *"Preliminary/Final Land Development Plan- The Quadrangle Art Studio Addition"* (nine sheets) dated August 29, 2024.

The applicant, HCP MA3 Pennsylvania, LP, proposes to construct a 938 SF addition at the referenced property. Stormwater management is not required since less than 1,000 SF of new impervious surface is proposed. The property is located within the R-1 Zoning District.

The applicant has requested the following waivers:

- From §160-3.B regarding submission of a preliminary plan.
- From §160-4.E(5)[e](4) regarding the requirement to identify storm drainage, sanitary sewer, and public water supply lines and facilities within 400 feet of the site.
- From §160-4.E(5)[g] regarding the final plan submission requirements, except for erosion and sediment control plan and landscaping plan (partial waiver requested).
- From §160-4.E(5)[i] regarding a traffic study.
- From §160-4.F(2) regarding the proposed layout for a major land development area, except erosion and sediment control and landscaping (partial waiver).

We offer the following comments:

ZONING

1. The site is located in the R-1 zoning district. The plans should be revised to indicate the same and the bulk and area requirements indicated in §182-202.C including setbacks, building and impervious coverage, and height,

identified in the zoning data table.

SUBDIVISION AND LAND DEVELOPMENT

2. The following plan requirements are to be addressed:
 - a. The location, names and widths of streets, curbs, and pavement (public or private), all property lines and within 200 feet of the site should be provided or a waiver requested. (§160-4.E(5)[e](3))
2. Curbs are required for all existing and proposed streets. (§160-5.B(4)[a])
3. Sidewalks are required for all existing and proposed streets. (§160-5.B(4)[c])
3. The Shade Tree Commission should review all proposed landscaping and tree replacement.

GENERAL

4. The proposed impervious coverage is only 62-square feet below the threshold for required stormwater management. The applicant should note that any changes during construction that add impervious coverage in excess of the threshold may necessitate stormwater management facilities. (§78-18.B(2))
5. The applicant should clarify if the proposed art studio will be open to the public.
6. Access to the building should be clearly identified on the plan.
7. The location of the proposed addition should be identified on the overall property plan.
8. The limit of disturbance appears to be very restrictive and does not appear to allow for typical room needed to accommodate construction.
9. The signature blocks are to be revised to indicate "*Haverford Township*". Also revise the name of the municipality for the signature blocks for Planning Commission and Engineer.
10. If approved, a Grading, Drainage, Soil Erosion and Sedimentation Control Permit will be required.

Should you have any further questions or comments, please contact the undersigned.

Sincerely,

PENNONI

Charles Faulkner, PE
Senior Engineer

Township of Haverford

Resolution Number 2419-2024

American Rescue Plan Act Coronavirus Local Fiscal Recovery Fund Parks & Recreation Projects

Whereas, Haverford Township's direct allocation from the Coronavirus State and Local Fiscal Recovery Fund was \$19.8 million;

Whereas, on April 1, 2022, the U.S. Department of Treasury released the Final Rule covering the Coronavirus State and Local Fiscal Recovery Fund, as created and directed by the American Rescue Plan Act authorizing recipients to use funds to invest in public health improvements, economic recovery and development, services to disproportionately affected communities, infrastructure improvements and general government services, among other allowable purposes; and,

Whereas, the Board of Commissioners desires to make improvements and financial investments in Township projects and initiatives in accordance with the allowable spending structure as described by the U.S. Department of Treasury's Final Rule, as follows:

Brookline Park Stormwater Management Facilities in the amount of \$237,000;

Supplemental Field Lighting at Jack McDonald Field in the amount of \$12,000;

Freestanding playground equipment at various parks in an amount not to exceed \$10,000;

Darby Creek Trail South Expansion – Phase 2 in the amount of \$200,000.

Now, Therefore, be it Resolved, that the Board of Commissioners of Haverford Township hereby approves the use of funds from the Township's American Rescue Plan Fund allocation for the above referenced projects and initiatives.

Resolved this 12th day of November, 2024.

PARKING LOT LICENSE AGREEMENT

This **Parking Lot License Agreement** ("Agreement") is made effective upon execution by both parties, ("Effective Date"), by and between the **KARAKUNG SWIM CLUB**, a private swim club with a physical location at 1800 Karakung Dr., Ardmore, PA 19083 and a mailing address of Box 812, Havertown, PA 19083 ("Licensor") and the **TOWNSHIP OF HAVERFORD**, a Pennsylvania Home rule municipality with a business address of 1014 Darby Road, Havertown, PA 19083 ("Licensee").

RECITALS

WHEREAS, Licensor is the legal landowner of record of the property constituting the Karakung Swim Club and its associated parking lot, located primarily on Delaware County Folio No. 22-0601253-00 ("Parking Lot"), used by the members of the swim club for the parking and access to the swimming club facilities, located primarily on Delaware county Folio No. 22-06-01252-01, with a property address of 1800 Karakung Drive, Admore, Haverford Township (collectively, the "Property");

WHEREAS, Licensee is the landowner of the property across the street from the Parking Lot, known as Karakung Field, being Delaware County Folio No. 22-06-01251-00, and used as baseball fields and facilities for the Township ("Karakung Field");

WHEREAS, Licensee desires to obtain the right to use parking spaces within the Parking Lot, and access to and from the Parking Lot, for parking associated with the use of Karakung Field;

WHEREAS, Licensor has agreed to license use of the Parking Lot to Licensee for such purposes, subject to the terms and conditions set forth herein;

WHEREAS, the parties hereto agree that this Agreement is a license from Licensor for the Licensee to use the Parking Lot, and all ownership rights of the Property remain with Licensor.

AGREEMENT

NOW, THEREFORE, based upon the foregoing recitals and for good and valuable consideration, the receipt and adequacy of which is hereby acknowledged, and in consideration of the terms, conditions, and covenants as herein provided, the parties agree as follows:

1. **PREMISES.** Licensor hereby grants Licensee a non-exclusive license to the area of the Parking Lot now used for parking of motor vehicles and the area used for access to and from the Parking Lot ("Premises"). Licensee shall have no other real property interest in the Premises apart from the rights created in this Agreement or unless such rights originate through Licensee's rights as a municipal entity. The Premises subject to this Agreement is further reflected in Exhibit "A".
2. **PERMITTED USE.** Licensor hereby grants Licensee, and Licensee's agents, employees, representatives, and guests, including the public as Licensee's invitees, the non-exclusive right,

privilege and permission, subject to the terms and provisions of this Agreement, to use and occupy the Premises for the sole purpose of a parking lot associated with the use of Karakung Field, including vehicular and pedestrian access to/from the Premises, which use and occupation shall encompass all such uses traditionally and reasonably associated with a parking lot and as used by Licensor's invitees ("Permitted Use"). However, the Permitted Use shall specifically exclude the prolonged parking of Township owned vehicles, overnight parking, and storage of vehicles or equipment by the Licensee to the Licensee's invitees. Rather, the parties intend that the Premises shall be used primarily as visitor parking for Karakung Field events and activities. Use of the Premises shall be prohibited from dusk to dawn except during night sporting events utilizing the lights at Karakung Field.

3. **TERM.** The term of this Agreement will be from the Effective Date established above until March 1, 2027. The parties reached an oral agreement in principle on April 26, 2024, and Licensor began allowing Licensee and its invitees to use the Premises on May 2, 2024. This Agreement does not include an automatic renewal of the Term or need to provide notice of renewal or lack of renewal, and no representation is made by Licensor that the Agreement will be renewed. However, the parties agree to engage in good faith discussions pertaining to a potential Agreement renewal upon completion of the second year of the Term, starting March 1, 2026.

4. **LICENSE FEE.** Beginning on the Effective Date, Licensee shall pay Licensor a license fee of **Thirty-Seven Thousand Five Hundred Dollars (\$37,500.00)**. Such payment shall be the sole payment due from the Effective Date through March 1, 2027. Payment shall be made within sixty (60) days of the Effective Date as defined above.

5. **QUIET ENJOYMENT.**

(a) Licensee, upon commencement of the Fee Commencement Date, and observing and keeping all covenants, agreements, and conditions of this Agreement on its part to be kept, shall be permitted to use, occupy, and enjoy the Premises during the Term of this Agreement without hindrance or molestation by anyone claiming by or through Licensor, subject, however, to the exceptions, reservations, and conditions of this Agreement.

(b) Use of the Premises by Licensee and its agents, contractors, and invitees, shall be limited as follows:

- (1) Licensor may close and lock the premises from November 1 through March 1 ("Winter Months"). During the Winter Months, Licensee and its agents, contractors, and invitees will not be permitted access to the Premises for the Permitted Use under this Agreement.
- (2) No parking shall be permitted at the Premises from dusk to dawn except for during night sporting events that utilize the lights at Karakung Field.
- (3) From the Saturday before Memorial Day through Labor Day ("Swim Season"), Licensor and its members and guests, shall have priority to park at the Premises. Such priority shall not entitle Licensor to prohibit non-swim parking at the Premises. The Priority shall entitle Licensor to confer with

permit users of Karakung Field to attempt to prioritize parking for Licensor's members and guests. In order to better plan for potential parking shortages, Licensor shall advise Licensee at least 48 hours in advance of any known or anticipated events at the swim club that are expected to result in limited parking on the Premises.

- (4) Licensor may limit parking on the portion of the Premises that immediately abuts Cobbs Creek if Licensor determines in its sole discretion that such parking may be unsafe or may further cause erosion of the creek bank. Such limitation on parking shall not constitute Interference or an abridgement of Quiet Enjoyment or Access as set forth herein.

(c) During the Winter Months, Licensor may, in its sole discretion, use the Premises in any manner including renting or licensing the Premises to a Third Party. Licensor shall promptly notify Licensee of any such arrangement. Such use during the Winter Months shall not be deemed Interference or an infringement on Access or Quiet Enjoyment as set forth herein. Licensor shall ensure that the Premises are in a usable condition and available to Licensee and its agents, contractors, and invitees by March 1.

6. **TERMINATION.** This Agreement may be terminated, without penalty by either party on thirty (30) days prior written notice if the other party remains in default under Section 15 of this Agreement after the applicable cure periods. Upon termination, Licensee shall not be permitted to use the Premises for the Permitted Use. If the Agreement is rightfully terminated by the Licensee, Licensee shall be entitled to a pro rata refund of the License Fee from the date of Termination through the end of the Term.

7. **INSURANCE.** During the Term, Licensee will maintain, at its own cost, commercial general liability insurance of \$1,000,000 per occurrence \$2,000,000 in the aggregate with Licensor named as an additional insured. Licensee may satisfy these requirements by obtaining the appropriate endorsement to any master policy of liability insurance as Licensee may maintain. A certificate of insurance evidencing the insurance required to be maintained by Licensee under this Section shall be delivered to Licensor upon request from Licensor, but no more than once per any calendar year.

8. **INTERFERENCE.**

(a) Except as set forth in paragraph 5.c., Licensor will not grant, after the date of this Agreement, a lease, license, easement or any other right to any third party, if the exercise of such grant may in any way adversely affect, impair, or interfere with the Licensee's reasonably unfettered use and occupancy of the Premises. Licensor's agreement with Haverford Township Little League (HTLL) shall not constitute interference.

(b) Licensor will not, nor will Licensor permit its employees, licensees, invitees, agents or independent contractors to, interfere in any way with the Licensee's reasonable use and occupancy of the Premises, Licensee's Permitted Use, or the operations of Licensee or the rights of Licensee under this Agreement. Use of the Premises by Licensor, its members, and guests shall

not constitute Interference. Licensor will cause such interference to cease within twenty-four (24) hours after receipt of notice of interference from Licensee.

(c) This Agreement shall not amend, repeal, replace, terminate or otherwise alter any easement, right of way, or other similar agreement or covenant currently recorded against the Property or to which the Property is currently subject to.

9. **INDEMNIFICATION.** Licensor shall indemnify and hold harmless Licensee against any and all claims, damages, costs and expenses (including reasonable attorney's fees and disbursements) caused by or arising out of Licensor's breach of this Agreement or the negligent acts or omissions or willful misconduct on the Property or to the Property by Licensor or the employees, agents, or contractors of Licensor, or any negligent repairs, maintenance, operations, or physical conditions of the Property, the Parking Lot and/or the Premises unless such conditions were caused by Licensor or its agents, contractors, or invitees. The parties agree that this Agreement is solely a license agreement that provides Licensee with a right to use and occupy the Premises as set forth in this Agreement, and does not provide Licensee with the responsibility to maintain, repair, or alter the Premises, Property, or Parking Lot, with such responsibilities remaining with the Licensor, for which Licensor indemnifies Licensee hereunder. Licensee shall indemnify and hold harmless Licensor against any and all claims, damages, costs and expenses (including reasonable attorney's fees and disbursements) caused by or arising out of Licensee's breach of this Agreement or the negligent acts or omissions or willful misconduct on the Property by Licensee or the employees, agents, guests, or contractors of Licensee. This indemnification shall not be deemed a waiver of Licensee's right to sovereign immunity as a governmental entity or qualified immunity in any action against Licensee or Licensor.

10. **WARRANTIES.**

(a) Licensee and Licensor each acknowledge and represent that it is duly organized, validly existing and in good standing and has the right, power and authority to enter into this Agreement and bind itself hereto through the party set forth as signatory for the party below.

(b) Licensor represents, warrants and agrees that: (i) Licensor owns and controls the Premises (ii) the Premises is not and will not be encumbered by any new liens, restrictions, mortgages, covenants, conditions, easements, leases, or any other agreements of record or not of record, which would adversely affect the Permitted Use and Licensee's enjoyment of the Premises under this Agreement; (iii) as long as Licensee is not in default then Licensor grants to Licensee quiet and peaceful use, enjoyment and possession of the Premises without hindrance or ejection by any persons lawfully claiming under Licensor, subject to the limitations and reservations contained in Section 5 (Quiet Enjoyment) and elsewhere in this agreement; and (iv) Licensor's execution and performance of this Agreement will not violate any laws, ordinances, covenants or the provisions of any mortgage, lease or other agreement binding on Licensor.

11. **ENVIRONMENTAL.**

(a) Licensor represents and warrants that to the best of Licensor's knowledge, no pollutants or other toxic hazardous substances, as defined under the Comprehensive Environmental Response, Compensation, and Liability Act ("CERCLA"), 42 U.S.C. 9601 et seq., or any other

federal or state law, including any solid, liquid, gaseous, or thermal irritant or contaminant, such as smoke, vapor, soot, fumes, acids, alkalis, chemicals or waste (including materials to be recycled, reconditioned or reclaimed) (collectively, "Hazardous Substances") have been, or shall be discharged, disbursed, released, stored, treated, generated, disposed of, or allowed to escape or migrate (collectively referred to as the "Release") on or from the Premises in violation of any applicable federal, state or local environmental laws.

(b) Licensors and Licensees each agree to indemnify and hold harmless the other from and against any and all administrative and judicial actions and rulings, claims, causes of actions, demands and liability including, but not limited to, damages, costs, expenses, assessments, penalties, fines, cleanup, remedial, removal or restoration work required by any governmental authority, losses, judgments and reasonable attorneys' fees that the indemnified party may incur due to the existence or discovery of any Hazardous Substances on the Property caused by the other party. The provisions of this Section 11 will survive the expiration or termination of this Agreement.

12. **ACCESS.** At all times throughout the Term of this Agreement, and at no additional charge to Licensee, Licensee and its employees and agents will have pedestrian and vehicular access to and over the Premises, including the ability to park in the Parking Lot, from an open and improved public road to the Premises. Such access shall be permitted from dawn to dusk and during night sporting events at Karakung Field that utilize the lights, except that no access shall be permitted during the Winter Months from November 1 to March 1 for the Permitted Use. Licensors shall not erect or construct any building, barrier or other structure on or within the Premises that would interfere with the license granted to Licensee to park and access the Premises except that Licensors may prohibit parking on the portion of the Premises that abuts Cobbs Creek as provided above. Licensors shall not excavate any portion of the grounds within the Premises or change the grade of the ground over improved portion of the Premises (without the permission of Licensee). Without limiting the generality of the foregoing, each party retains the right to use the Premises for parking and for ingress and egress, both vehicular and pedestrian, for themselves and their agents, employees, tenants, licensees and invitees. Nothing in this Agreement shall pertain to any actions or obligations taken by Haverford Township for official municipal purposes (e.g. code inspections) unrelated to the Permitted Use.

13. **Intentionally Omitted.**

14. **MAINTENANCE.** As associated with Licensee's use of the Premises, Licensee will keep and maintain the Premises in good condition, reasonable wear and tear and damage from the elements excepted. In all other respects, the responsibility to maintain and repair the Property (including the Parking Lot and the Premises) shall remain with the Licensors. Licensors will maintain and repair the Premises and access thereto and all areas of the Premises in good condition, subject to reasonable wear and tear and damage from the elements including erosion and other water damage caused by Cobbs Creek. Unless otherwise agreed to in writing by Licensee, Licensors shall, at the Licensors' sole cost and expense, make all necessary maintenance, repairs, and replacements to keep the Premises and other associated improvements, fixtures and equipment serving the Parking Lot in good condition, order, and repair, provided that such repairs are not necessitated by

the negligence or other act of the Licensee, its agents, employees, or invitees. At the expiration of this Agreement, the Licensee will surrender the Premises in, at least, as good condition as when received prior to any improvements, normal wear and tear excepted. All alterations, improvements or additions to the Premises shall remain on the Property and shall belong to Licensor upon the termination of this Agreement, unless otherwise agreed in writing between the parties.

15. **DEFAULT AND RIGHT TO CURE.**

(a) A party's failure to comply with any material terms of this Agreement shall be a default under this Agreement. Material terms shall include, but are not limited to, failure to make the required License Fee payment, or failure to comply with the paragraphs set forth above pertaining to Quiet Enjoyment, Insurance, Interference, Access, and/or Maintenance.

(b) Jurisdiction and venue under this Agreement shall be Delaware County, Pennsylvania. The parties may enforce this Agreement and their rights under applicable law, and they may seek specific performance, injunction, appointment of a receiver and any other equitable rights and remedies available under applicable law. The prevailing party shall be entitled to an award of its reasonable attorneys' fees and costs. Neither party shall be liable to the other for consequential, indirect, speculative or punitive damages.

(c) The non-defaulting party shall provide written notice of a default under this Agreement, not more than thirty (30) days from discovery of the default. From the date of such notice, the defaulting party shall have thirty (30) days in which case the defaulting party shall have such additional time as necessary to cure the default so long as the defaulting party has commenced to cure the default and is diligently pursuing completion of the cure.

16. **ASSIGNMENT/SUBLICENSE.** Licensee will not have the right to assign this Agreement or sublicense the Premises and its rights herein, in whole or in part, without Licensor's consent, which shall not be unreasonably withheld or conditioned.

17. **NOTICES.** All communications shall be delivered by certified mail, return receipt requested or a nationally recognized overnight courier to the address beneath each party's signature block or such other address as advised to the other party pursuant to this paragraph. Notice shall be deemed given upon receipt if by certified mail, return receipt requested or one (1) business day following the date of sending, if sent by nationally recognized overnight courier service or upon attempted delivery if delivery is refused or if delivery is impossible because of failure to provide reasonable means for accomplishing delivery.

If to Licensee: Haverford Township
Attn: Township Manager
1014 Darby Road
Havertown, PA 19083

If to Licensor: Karakung Swim Club
Attn: President, Board of Directors

P.O. Box 812
Havertown, PA 19083

Licensor or Licensee may from time to time designate any other address for this purpose by written notice to the other party, or accept acknowledged email messages to the persons set forth above as proper notice.

18. **CONDEMNATION.** In the event Licensor receives notification of any condemnation proceedings affecting the Property, Licensor will provide notice of the proceeding to Licensee within forty-eight (48) hours. If a condemning authority takes all of the Property, or a portion sufficient, in Licensee's sole determination, to render the Premises unsuitable for Licensee, this Agreement will terminate as of the date the title vests in the condemning authority. The parties will each be entitled to pursue their own separate awards in the condemnation proceeds, which for Licensee will include, where applicable, the value of any improvements installed by Licensee, prepaid license fees, and business dislocation expenses. Licensee will be entitled to reimbursement for any prepaid license fees on a pro rata basis.

19. **CASUALTY.** Licensor will provide notice to Licensee of any casualty or other harm affecting the Property within forty-eight (48) hours of the casualty or other harm. If any part of the Premises is damaged by casualty or other harm as to render the Premises unsuitable, in Licensee's sole determination, then Licensee may terminate this Agreement by providing written notice to Licensor, which termination will be effective as of the date of such casualty or other harm. Upon such termination, Licensee will be entitled to collect all insurance proceeds payable to Licensee on account thereof and to be reimbursed for any prepaid license fees on a pro rata basis.

20. **Intentionally Omitted.**

21. **TAXES.** Licensor shall pay, when due, all real property taxes and all other taxes, fees and assessments attributable to the Property and the Premises. Licensee shall pay, when authorized by Commonwealth law, taxes, levies, charges, fees, licenses or other assessments, if any, that are directly attributable to the Licensee's Permitted Use under this Agreement.

22. **MISCELLANEOUS.**

(a) **Amendment/Waiver.** This Agreement cannot be amended, modified or revised unless done in writing and signed by Licensor and Licensee. No provision may be waived except in a writing signed by both parties. The failure by a party to enforce any provision of this Agreement or to require performance by the other party will not be construed to be a waiver, or in any way affect the right of either party to enforce such provision thereafter.

(b) **Limitation of Liability.** Except for the indemnity obligations set forth in this Agreement, and otherwise notwithstanding anything to the contrary in this Agreement, Licensee and Licensor each waives any claims that each may have against the other with respect to consequential, incidental or special damages, however caused, based on any theory of liability.

(c) Compliance with Law. Licensee agrees to comply with all federal, state and local laws, orders, rules and regulations (“Laws”) applicable to Licensee’s use of the Premises on the Property. Licensor agrees to comply with all Laws relating to Licensor’s ownership and use of the Property and any improvements on the Property, including the Premises.

(d) Bind and Benefit. The terms and conditions contained in this Agreement will run with the Property and bind and inure to the benefit of the parties, their respective heirs, executors, administrators, successors and assigns.

(e) Severability. If any provision contained in this Agreement (or any portion of such provision) shall be held to be invalid, illegal, or unenforceable, such invalidity, illegality, or unenforceability shall not affect any other provision of this Agreement (or any portion of any such provision.)

(f) Entire Agreement. This Agreement and the exhibits attached hereto, all being a part hereof, constitute the entire agreement of the parties hereto and will supersede all prior offers, negotiations and agreements with respect to the subject matter of this Agreement. Except as otherwise stated in this Agreement, each party shall bear its own fees and expenses (including the fees and expenses of its agents, brokers, representatives, attorneys, and accountants) incurred in connection with the negotiation, drafting, execution and performance of this Agreement and the transactions it contemplates.

(g) Governing Law. The Agreement will be governed by and construed in accordance with the laws of the Commonwealth of Pennsylvania. Exclusive jurisdiction and venue for suit arising under the terms of the Agreement will be in the appropriate court located in Delaware County, Pennsylvania.

(h) Interpretation. Unless otherwise specified, the following rules of construction and interpretation apply: (i) captions are for convenience and reference only and in no way define or limit the construction of the terms and conditions hereof; (ii) use of the term "including" will be interpreted to mean "including but not limited to"; (iii) whenever a party's consent is required under this Agreement, except as otherwise stated in this Agreement or as same may be duplicative, such consent will not be unreasonably withheld, conditioned or delayed; (iv) exhibits are an integral part of this Agreement and are incorporated by reference into this Agreement; (v) use of the terms "termination" or "expiration" are interchangeable; (vi) reference to a default will take into consideration any applicable notice, grace and cure periods; (vii) to the extent there is any issue with respect to any alleged, perceived or actual ambiguity in this Agreement, the ambiguity shall not be resolved on the basis of who drafted the Agreement; (viii) the singular use of words includes the plural where appropriate and (ix) if any provision of this Agreement is held invalid, illegal or unenforceable, the remaining provisions of this Agreement shall remain in full force if the overall purpose of the Agreement is not rendered impossible and the original purpose, intent or consideration is not materially impaired.

(i) Execution/No Option. The submission of this Agreement to any party for examination or consideration does not constitute an offer, reservation of or option for the Premises based on the terms set forth herein. This Agreement will become effective as a binding Agreement only upon the handwritten legal execution, acknowledgment and delivery hereof by Licensor and Licensee. This

Agreement may be executed in two (2) or more counterparts, all of which shall be considered one and the same agreement and shall become effective when one or more counterparts have been signed by each of the parties. All parties need not sign the same counterpart.

(j) Either party may record this Agreement or a memorandum thereof in the Delaware County Recorder of Deeds Office at such party's expense.

Signature Page to Follow

RE: Construction Administration Services
Renovation of Skatium Locker Rooms

Dear Aimee,

Per conversation with the Owner' Representative for the above referenced project, BKP Architects (BKP) and consultants propose to provide the following services during execution of the renovation:

1. Review and take action on Substitution Requests
2. Issue Proposal Requests to contractor(s) in the case additional work is required
3. Review and take action on contractor Change Order Requests
4. Issue formal Change Order paperwork
5. Review and take action on monthly Payment Applications
6. Review and take action on contractor Requests for Information
7. Review and take action on contractor submittals
8. Issue construction administration (interpretation) sketches
9. Serve as initial decision-maker/interpreter of the intent of the Construction Documents
10. Attend bi-weekly construction progress meetings
11. Issue punch list(s)
12. Issue Certificate(s) of Substantial Completion

Fees for services are as follows:

BKP: 60 hours @ \$120/hour: \$7,200

Items 1, 2, 3, 4, 5, 6, 8, and 9 estimate 20 hours

Item 7 estimate 20 hours

Items 10, 11, and 12 estimate 20 hours

ARCHITECTURE PLANNING INTERIORS

BKP Architects P.C. | 1525 Locust Street, 5th Floor, Philadelphia, PA 19102 | T 215.557.6509 | F 215.557.6321

Darrell L. Kratzer, AIA, Principal | Joseph H. Powell, AIA, Principal | Caitlin A. Daley, AIA, Principal

H. F. Lenz: 80 hours @ \$160/hour: \$12,800

Items 1, 2, 3, 4, 5, 6, 8, and 9 estimate 8 hours
Item 7 estimate 48 hours
Items 10, 11, and 12 estimate 12 hours

JBCI: 20 hours @ \$280/hour: \$5,600

Items 1, 2, 3, 4, 5, 6, 8, and 9 estimate 4 hours
Item 7 estimate 4 hours
Items 10, 11, and 12 estimate 12 hours

Regards,

RE: Haverford Township Skatium Renovation Project- Bid Results

Mr. Burman,

On October 24, 2024, the bids for the Haverford Township Skatium Renovation Project were received and publicly read aloud at the Haverford Township Municipal building. Below is a summary of the four low Prime Contractors' base bid amounts. The bids have been reviewed by the Township's Solicitor who confirmed all the paperwork submitted in the bids are in compliance with the project specifications. In addition, all of these contractors have meet the requirements of the Responsible Contractor Ordinance as confirmed by the Township's Solicitor. We recommend the Board of Commissioners approve moving forward with the contracts as shown below.

General Construction Contract

S.B. Conrad, Inc.- Base bid \$739,833.00. There are no Alternates for this contract.

Mechanical Contract

Myco Mechanical, Inc.- Base bid is \$212,000.00. There are no Alternates for this contract.

Plumbing Contract

LGB Mechanical, Inc.- Base bid is \$362,000.00. There are no Alternates for this contract.

Electrical Contract

AJM Electric, Inc.- Base bid is \$236,680.00. There are no Alternates for this contract.

Total Hard Cost for Construction for the four Prime Contracts is \$1,550,513.00

Please let us know if you have any additional questions. We look forward to getting the project moving forward!

Sincerely,

Kenneth C. Matthews

RE: Haverford Township Free Library Renovation & Addition Project- Detwiler Existing Roof Overlays

Mr. Burman,

Attached please find Detwiler Roofing's proposal to provide new roofing at the existing 1979 building as recommended by the Township's Roofing Consultant (Mark Sobeck & Associates). The contract documents showed keeping the existing roof but providing additional insulation on the underside of the roof to meet current code insulation requirements. In lieu of providing this interior insulation, Sobeck is recommending removing the old rubber roof, add additional insulation on top of the existing insulation, and install a new rubber roof in its place.

Additionally, the contract documents called for the existing metal roof from 1979 at the second-floor clerestory to remain as is and only be power washed. Due to the age and existing condition of this metal roof, Sobeck is recommending that a new rubber membrane roof is installed over the top of the metal roof. These two roof areas will give the library all new roofing (bank building, 1979 building, and new additions) and all new warranties for the next 20 years.

After reviewing the attached Detwiler Costars proposal, we recommend approval for the Township to go into contract with Detwiler in the amount of **\$125,160.00 (One hundred twenty-five thousand one hundred sixty dollars and zero cents)** for the scope of work proposed above. We had pursued pricing for this work from the general contractor's roofer however their costs were significantly more than this recommendation even after negotiations.

It should be noted there is a credit coming back from the general contractor for deleting the interior insulation under the roof. This is documented in our change or recommendation letter for changes being presented this month to the Board of Commissioners in the amount of **(\$54,744.90)**.

Please let us know if you have any questions or comments.

Sincerely,

Kenneth C. Matthews

Costars Contract #8

Costars #248814

Scope of Work:

- Remove existing EPDM and walk pads from the roof.
- Mechanically fasten 1.5” insulation through the existing insulation.
- Fully adhere 60mil EPDM for a 20 Year Warranty.
- Install flute filler insulation between ribs of standing seam roof.
- Mechanically fasten 2.5” Securshield 25 PSI ISO.
- Install flute filler insulation between ribs of wall panels.
- Mechanically attach 1/2” Cover board over wall panels.
- Fully adhere 60mil EPDM to the walls at the wall panel areas.
- Approved edge metal fascias around the perimeter of the building.

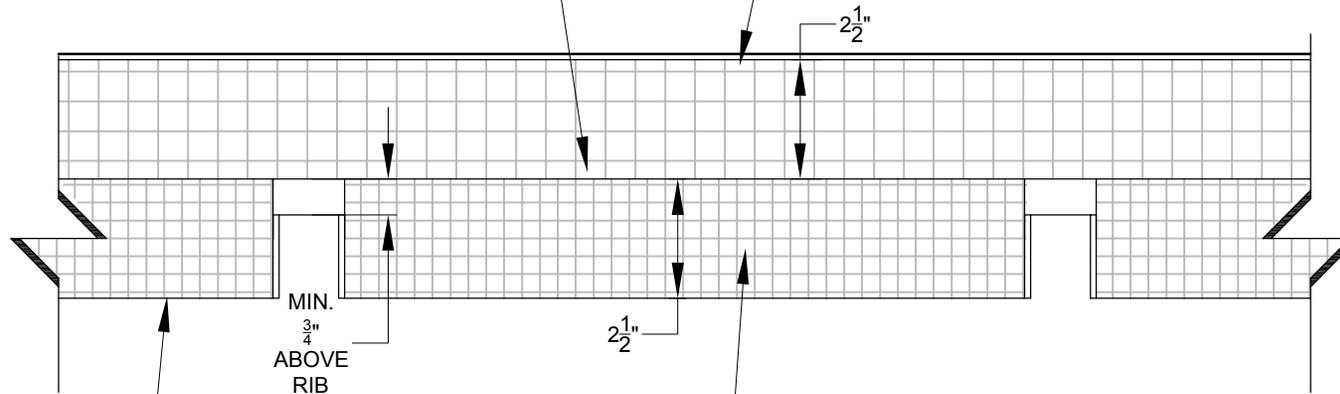

\$125,160

Joshua Horning
Estimator
Detwiler Roofing LLC

OVER THE FLUTE-FILLER INSULATION, FURNISH AND INSTALL **NEW 2- $\frac{1}{2}$ " SECURSHIELD POLYISOCYANURATE INSULATION** WITH COATED-GLASS FACERS, 25 PSI COMPRESSIVE STRENGTH. SECURE ALL INSULATION WITH PLATES AND FASTENERS IN ACCORDANCE TO THE MANUFACTURE'S CURRENT INSTALLATION INSTRUCTIONS, INCLUDING ALL PERIMETER AND CORNER ENHANCEMENTS. INSTALL WITH STAGGERED JOINTS IN EVERY DIRECTION MINIMUM 6". TYPICAL.

FURNISH AND INSTALL NEW **FULLY-ADHERED .060" NON-REINFORCED BLACK EPDM RUBBER MEMBRANE IN CAV-GRIP III SPRAY ADHESIVE** CONTINUOUSLY OVER NEW INSULATION IN ACCORDANCE TO THE MANUFACTURER'S CURRENT INSTALLATION INSTRUCTION TO ACHIEVE THE SPECIFIED 20-YEAR, 72 MPH WINDSPEED WARRANTY. TYPICAL.

EXISTING STANDING SEAM METAL PANEL ROOF TO REMAIN.

OVER THE CLEAN AND DRY METAL ROOF PANELS, FURNISH AND INSTALL NEW **2- $\frac{1}{2}$ " THICK SECURSHIELD POLYISOCYANURATE INSULATION** CUT TO FIT THE FULL WIDTH OF THE STANDING SEAM PANEL. FIELD VERIFY. ALL POLYISOCYANURATE SHALL BE LOOSE-LAID. **ROOFING CONTRACTOR SHALL FIELD VERIFY THAT THE SPECIFIED THICKNESS IS SUFFICIENT TO EXTEND PAST THE STANDING SEAM RIBS ONCE THE PANELS ARE DEPRESSED.**

PANEL PROFILE DETAIL

SCALE: 3" = 1'-0"

GENERAL NOTES:

1. IT IS THE RESPONSIBILITY OF THE ROOFING CONTRACTOR TO FIELD VERIFY ALL EXISTING CONDITIONS, DIMENSIONS AND ROOF PENETRATIONS PRIOR TO BIDDING AND START OF WORK.
2. IT SHALL BE THE RESPONSIBILITY OF THE ROOFING CONTRACTOR TO COORDINATE DE-ENERGIZING, RE-LOCATION, RE-INSTALLATION, AND RE-ENERGIZING ALL ELECTRICAL CONDUITS INSTALLED ABOVE OR IN CLOSE PROXIMITY WITH THE RE-ROOFING WORK NOTED HEREIN. ANY ELECTRICAL WORK, AS NOTED ABOVE, SHALL BE PERFORMED BY OTHERS.

RE: Haverford Township Free Library Renovation & Addition Project- Book Shelving

Mr. Burman,

In coordination with the Library and the project architect (Bernardon) a detailed scope of work was designed for the furniture package, inclusive of both book shelving and loose furniture, to be installed in the newly renovated Library. We then reached out to three reputable furniture Costars firms for proposals that are attached for reference. At this time this letter is in reference only to the book shelving award. The loose furniture package is still being finalized with the library and the vendor and will be completed later this month. We will issue a recommendation letter in a few weeks for approval by the Board of Commissioners at their December meeting for the loose furniture.

After reviewing the book shelving proposals with the Library and Bernardon, Cofco was determined to be the lowest qualified bidder. Attached please find Cofco's proposal to furnish and install the book shelving throughout the Library. We recommend the Township approve moving forward with Cofco in the amount of **\$836,595.55 (Eight hundred thirty-six thousand five hundred ninety-five dollars and fifty-five cents)**. Please note that this cost fits within the approved project budget for furniture scope of work.

Please let us know if you have any questions or comments.

Sincerely,

Kenneth C. Matthews

RE: Haverford Township Free Library Renovation & Addition Project- Applied Video Technology, Inc.-
Audio Visual

Mr. Burman,

In coordination with the Library, Bernardon and Convergent (Audio Visual Consultant) a detailed scope of work was designed for the audio-visual systems to be installed in the newly renovated Library. We then reached out to three reputable audio-visual Costars firms for proposals that are attached for reference.

After reviewing the proposal with the Library, design team and Convergent, Applied Video Technology, Inc. (AVT) was determined to be the lowest qualified bidder. Attached please find AVT's proposal to furnish, install and program the audio-visual equipment throughout the Library building. We recommend the Township approve moving forward with AVT in the amount of **\$375,194.79 (Three hundred seventy-five thousand one hundred ninety-four dollars and seventy-nine cents)**. Please note that this cost fits within the approved project budget for audio visual scope of work.

Please let us know if you have any questions or comments.

Sincerely,

Kenneth C. Matthews

CENERO NOTES

*Training is charged according to what room type a particular room is, and the charge is pro-rated across all identical rooms of that type, therefore the higher the quantity of rooms, the smaller the per room training charge.

**Sales Tax is presented as the amount of tax Cenero will collect from the client on behalf of the government, which is only applicable in AZ, CA, CT, D.C., FL, GA, IL, IN, IA, KY, MD, MA, MI, MN, NC, NJ, NY, OH, PA, SC, TN, TX and VA. For all other locations, the client will have to pay sales tax to the government directly.

Dave Burman- Township Manager
Haverford Township
1014 Darby Rd.
Haverford, PA 19083

RE: Haverford Township Free Library Renovation & Addition Project- Bernardon Additional Construction Administration Services

Mr. Burman,

Attached please find Bernardon's request for additional construction administration services. As discussed, Bernardon's contract for construction administration services is a not to exceed allowance. After Bernardon's September invoice their contract allowance will essentially be depleted. As there are still roughly eight months left of construction and project closeout, Bernardon is requesting addition allowance funds to continue servicing the project through punchlists and final close out.

After reviewing the attached letter these services are above Bernardon's contractual obligations and we recommend approval of an add to their contract in the amount of **\$45,000.00 (Forty-five thousand dollars and zero cents)**. It should be noted that we are looking to recover some of Bernardon's construction administration fees from the general contractor for various reasons but mostly due to very poor paperwork submission. The exact credit back to the Township has yet to be determined but we are hopeful to have that finalized before the end of the year.

Please let us know if you have any questions or comments.

Sincerely,

Kenneth C. Matthews

Kenneth C. Matthews

Havertown, PA 19083

RE: Amendment to the Professional Services Agreement
Haverford Township Free Library
Amendment Number: 023
Bernardon Project No. 7010.00-16

Dear Sukrit:

Our original Basic Services agreement dated December 7, 2015 states that the compensation for Bidding and Construction Administration services are based on estimated allowances. The scope of these services are as defined in the agreement and further elaborated on in Amendment 10 to the agreement. As of the writing of this proposal, we have nearly exhausted these allowances. This Amendment 023 extends the Construction Administration phase compensation allowance by the amount listed below. This compensation remains an estimated amount and we may need to extend the allowance further if we continue to spend more time on Construction Administration services than is anticipated.

These services will supplement the building renovation design/documentation services provided under the Basic Services agreement dated December 7, 2015 and subsequent Amendments.

ADDITIONAL SERVICES AND EXCLUSIONS

Our services are limited to the scope of services described above. If the scope of the project or our services changes, we reserve the right to invoice for further Additional Services. Examples of these other Additional Services would include:

- Providing services after a substantial delay in the project schedule.
- Revising drawings previously approved.

The following is not included in our basic scope of services:

- Hazardous Material Abatement documentation and specification.

COMPENSATION

The above services will be provided on an hourly basis at our standard hourly rates, which are adjusted annually.

Architectural and Consulting Engineering Services (allowance)	<u>\$45,000.00</u>
TOTAL NOT-TO-EXCEED AMENDMENT FEE:	\$45,000.00

Bernardon 2022 Hourly Rate Schedule:

Principal	\$220.00
Director	\$220.00
Director of Interior Design	\$200.00
Associate	\$190.00
Senior Project Director	\$180.00
Project Director	\$165.00
Project Architect/Project Mgr.	\$150.00
Architect/Senior Designer	\$140.00
Landscape Architect	\$130.00
Designer III	\$120.00
Designer II	\$110.00
Designer I	\$100.00
Office Assistant	\$ 90.00

Rates above apply until Fall 2024.

Reimbursable Expenses

Please note that reimbursable expenses for items such as printing, travel, and overnight delivery are not included in the professional fees noted above. Reimbursable expenses and additional services of consultants will be invoiced at 1.10 times our cost. Mileage will be charged in accordance with the standard IRS mileage rate. We estimate these expenses to be approximately \$450 for this effort.

TERMS AND CONDITIONS

We can begin performing services immediately upon receiving authorization to proceed. Services will be provided in accordance with our original Basic Services agreement dated December 7, 2015, amended to include our current hourly rates provided under Compensation.

We appreciate the opportunity to submit this proposal. If this proposal is found acceptable, an AIA Document G802 *Amendment to the Professional Services Agreement* shall be prepared, referencing this proposal as an Exhibit. Thank you for your consideration.

Respectfully submitted,

Tim Kiser, AIA | Regional Managing Director
Bernardon, LLC

RE: Haverford Township Free Library
Follow-up to Amendment Number 023
Bernardon Project No. 7010.00-16

Dear Sukrit:

Dave Burman has requested that we provide additional background to our request for Amendment 23, dated August 23, 2024. Our original Basic Services agreement dated December 7, 2015 states that the compensation for Bidding and Construction Administration (CA) services are based on estimated allowances. The scope of these services are as defined in the agreement and further elaborated on in Amendment 10 to the agreement. Services that constitute Additional Services are also defined in the agreement and Amendment 10 and include modifications to previously approved designs and documentation, and the addition of scope of work to the project. Mr. Burman has requested that we provide information on services that we have provided and will be providing that are above and beyond normal Bidding and Construction Services and have contributed to our request to extend the Bidding and Construction Administration allowances.

Services provided to date that are above and beyond normal Bidding and Construction Services include the following:

1. The Bidding period lasted longer than anticipated. Bidding began in mid-September 2023 and contractor contracts were executed at the beginning of December 2023, roughly 2 ½ months. At the conclusion of Bidding services, we had already begun invoicing approximately 5% of the CA services allowance, as agreed upon with the Library.
2. Extra Structural Steel Shop Drawing Reviews: To date we have reviewed the Structural Steel shop drawings 4 times, and have responded to multiple Requests for Information (RFI's). We typically anticipate up to two shop drawing reviews for this type of submittal.
3. Furniture (FF&E) and Audio/Visual (AV): The allowances include the Bidding and CA services associated with the two FF&E designs (shelving and loose furniture) and the AV design. We are in the process of evaluating the bids and are working with the Library to find cost-saving reductions in previously approved scope.
4. Bulletins documenting scope added or changed during construction (services not covered under separate Amendments):
 - Bulletin 6 modified previously approved laptop bars, the previously approved Lounge, added below-slab drainage in the Lower Level, added water-powered back-up pumps, and documented revisions to stormwater lines.

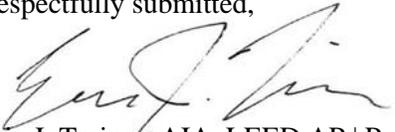

- Bulletin 7 further modified casework in the Lounge and added ducted exhaust over the oven/range (including architectural, mechanical and electrical modifications), removed previously documented power to motorized operable panel partitions (making them manually operated), changed the previously approved location of the display screen in the Living Room and added a braced exterior wall above window in Non-Fiction area.
 - Bulletin 8 reorganized the previously approved second floor Tutor rooms and Sensory Room and added a laptop bar (including architectural, mechanical and electrical modifications), and reorganized the previously approved MDF Closet, including deleting the equipment rack in the room.
 - Bulletin 9 replaced the previously approved gas-fired fireplace with an electric fireplace (including architectural, mechanical and electrical modifications), added a datestone to the front of the building, relocated the previously approved gas meter location and added additional water-powered back-up sump pumps.
 - Bulletin 10 enlarged the Janitor's Closet adjacent to former elevator shaft and revised previously approved 3D printer and laser cutter locations and exhaust (including architectural, mechanical and electrical modifications).
 - A future Bulletin will include the detail at the recently uncovered historical bank window adjacent to the Circulation Desk and changing the second-floor guardrail next to the elevator to a glass guardrail.
5. Meetings and discussions to review scope added to the project during construction include:
- Modifications to the Second Floor Sensory Room and adjacent Tutor Rooms.
 - Meetings associated with adding ducted exhaust to the Lounge included meetings with the Library and Haverford Township Historical Commission.
 - Added generator to the project. While the design services for the generator are covered under a separate Amendment, the cost of the generator was rejected and we are having ongoing discussions for a temporary generator plug-in.
 - Extended DAS system in the building (beyond the system for the Lower Level covered under a separate Amendment).
 - Discussions and product research associated with changing the fireplace to an electric model.
 - EV stations in parking lot. While the layout and installation of EV stations was not documented by Bernardon (scope will be recorded by the Electrical Contractor in the as-built drawings) there have been numerous discussions about the stations.
 - Sketches and discussions regarding the potential design of pedestrian entry at corner of new Mill Road parking lot.

Follow-up to Amendment 023
Haverford Township Free Library

October 2, 2024

We hope that the above addresses the questions raised by the Township concerning the extended allowances that we are requesting. We appreciate the opportunity to submit this information and thank you for your further consideration of Amendment 23.

Respectfully submitted,

Eric J. Trainer, AIA, LEED AP | Project Director

Total Tax (0%)	\$0.00
Total*	\$6,339.11

***Terms and Conditions:**

- 1) This price does NOT include an attachment system of any kind unless stated in the notes above
- 2) NGS does not recommend or warranty blackout film on glass surfaces with direct sunlight
- 3) Pricing does not include extended or after-hours labor fees unless stated
- 4) This proposal is ONLY valid for projects having at LEAST 5 days lead time from receipt of PO or contract. Anything less incurs expedited shipping & labor fees
- 5) NGS price does not include removal of existing film on glass unless indicated. Removal fees will apply
- 6) Credit Cards may be accepted for payment with a processing fee
- 7) Pricing assumes the client provides access to areas in scope (all furniture/ fixtures moved)
- 8) As it relates to wall graphics: Pricing assumes walls have been finished to a level 5 finish and that the graphic media manufacturer recommended primer has been used. NGS is NOT responsible for PSV (pressure sensitive adhesive) vinyl failure on walls not prepared by NGS.
- 9)**NOTE** Estimate assumes no additional engineering or special construction is required. Any atypical storefront construction requiring extra engineering or customization above and beyond oversize panels or additional mullion design may require additional fees to cover custom extrusions, components, cad design, and engineering time. This will be determined by the manufacturer's review of the submitted surveys.
- 10) Quoted total DOES NOT include costs for project -specific local licensing and/or permitting unless specified. Total is subject to change if NGS is responsible for acquiring these items.

Emergency Medical Services Administration Department Memorandum

To: David R. Burman, Township Manager

From: James P. McCans, Director

Re: Purchase of (2) Stryker Power Load Systems

This memo is to request AARPA funds for the purchase of two Stryker Power-Load systems to replace the existing Stryker Power-load systems. Our current systems have exceeded their expected life span of an estimated at five years. The Power-Load systems are “mission critical” as these units lift, load and secure the ambulance cots within the Township’s ambulances.

Largely due to the increase in respiratory disorders, cardiac diseases, and other illnesses secondary to COVID 19 and its ongoing variants; our Emergency Medical Services system continues to bear the brunt of increasing call volume and severity. The overwhelming majority of these patients are non-ambulatory and require transfer to the ambulance via cot for transport to a receiving hospital. Each transport requires cycle of four cot lifts per patient. In 2024 this will result in an estimated 12,500 lifts. The Power-Load systems save the rescuers from having to perform these lifts manually. The use of this system increases safety for our patients and rescuers.

These systems are proprietary and work exclusively with our recently purchased Stryker Power-PRO 2 cots.

Thank you for your ongoing support of our EMS system.

**RE: Brookline Park Stormwater Management Facilities
Contract No. SS-53**

Dear Mr. Burman:

Attached herewith is a tabulation of the bids received on Wednesday, November 6, 2024 at 10:00 a.m. for the above referenced contract. The low bidder was Frania, Inc. of Aston, PA with a bid of \$237,000.00. We have worked with Frania, Inc. in the past, and have found their work to be satisfactory.

We recommend the Township consider awarding the project to Frania, Inc. in the amount of \$237,000.00 contingent upon execution of the contract and supply of the required bonds and insurance.

Should you have any questions or comments, please do not hesitate to contact the undersigned.

Sincerely,

PENNONI

David Pennoni, PE
Township Engineer

PENNONI ASSOCIATES INC.
David Pennoni
 David Pennoni, P.E., PENNA.REG.NO. 039235-E

TOWNSHIP OF HAVERFORD & DISCOVER HAVERFORD ECONOMIC DEVELOPMENT AGREEMENT

This Agreement ("Agreement") is made and entered into this 12th day of November 2024, by the Township of Haverford, a political subdivision of the Commonwealth of Pennsylvania, with principal offices located at 1014 Darby Road, Havertown, PA 19083, ("Township"), and Haverford Partnership for Economic Development (dba Discover Haverford), a Pennsylvania not-for-profit corporation, with principal offices located at 412 Darby Road, Havertown, PA 19083 ("Discover Haverford").

PURPOSE

Discover Haverford and the Township agree that it is in the best interest of economic development within the Township to work hand-in hand to boost and strengthen the local economy as it continues to recover from economic losses as a result of the COVID-19 pandemic. This Agreement memorializes the services and responsibilities of each entity.

AGREEMENT

NOW, THEREFORE, in consideration of the mutual promises and covenants contained herein, the parties hereto agree as follows:

ARTICLE 1 - SERVICES BY DISCOVER HAVERFORD

Discover Haverford desires to engage in economic development and recovery efforts for the benefit of the Township and its local business community which shall include, but not be limited to, the following:

- a. Develop projects and programs to support businesses within the Township as they continue to recover from economic losses due to the COVID-19 pandemic. Special emphasis should involve efforts to encourage outdoor events and dining, where permitted, and encourage customer service improvements that would allow local businesses to continue operations in the event of another pandemic.
- b. Develop and administer events highlighting the economic and community offerings of the Township with the goal of attracting new and retuning customers to the local business districts.
- c. Promote the Township as a desirable location for entrepreneurship, for patronizing small businesses and as a welcoming place to enjoy a sense of community
- d. Employ an Executive Director and related support staff who are economic development professionals with the requisite knowledge, skills, and expertise necessary to lead economic development efforts and communicate effectively with the local business community
- e. Maintain an economic development web page to provide the most current information concerning economic development and opportunities for economic growth
- f. Any special event promoting community and/or economic development planned by Discover Haverford must first be discussed with the Township Manager of Haverford Township, and his/her designees, for logistical planning

g. Discover Haverford shall obtain and possess all licenses and permits applicable to its operations under federal, state and local laws throughout the term of this Agreement. Responsibility for these licenses and permits is the sole responsibility of Discover Haverford

h. Discover Haverford shall maintain its status as a not-for-profit corporation, organized and created under the laws of the Commonwealth of Pennsylvania

ARTICLE 2 - RESPONSIBILITIES OF HAVERFORD TOWNSHIP

The Township desires to support Discover Haverford in its efforts. Those supportive efforts shall include, but not be limited to, the following:

a. the Township Manager (or designee) will be available for semi-annual meetings with Discover Haverford staff to discuss current initiatives for generalized feedback

b. the Haverford Township Police Department will be available to discuss safety plans for any proposed special events organized by Discover Haverford

c. the Haverford Township Public Works Department will be available to discuss and plan for any proposed special events organized by Discover Haverford including plans for any trash removal or set up/break down efforts performed by Haverford Township employees using Haverford Township assets

ARTICLE 3 – OPERATING CONTRIBUTION TO DISCOVER HAVERFORD

In exchange for services described under Article 1, the Township will provide a contribution to Discover Haverford in an amount of \$110,000 covering services during January 1, 2025 through December 31, 2025 and \$115,000 covering services during January 1, 2026 through December 31, 2026. This contribution will be payable in equal quarterly payments and paid according to the Township's normal disbursement calendar.

ARTICLE 4 – REPORTING BY DISCOVER HAVERFORD

a. Discover Haverford will prepare and present a semi-annual report to the Haverford Township Board of Commissioners on the progress of economic development programs and activities within the Township.

b. Discover Haverford will submit an annual report to the Township Manager on its use of Township funds no later than January 31 of each year for the preceding calendar year.

ARTICLE 5 - RELATIONSHIP OF PARTIES

a. Discover Haverford is an independent entity and not a department, agency or subdivision of the Township. The Chairperson of the Commissioners' Economic Development Committee will also serve as a liaison between Discover Haverford and Haverford Township

b. The Township and Discover Haverford are two separate and autonomous entities. As such, the parties agree that documents and records kept by Discover Haverford are not intended to be subject to the Commonwealth of Pennsylvania Right to Know Laws. Nothing in this Agreement is intended to subject Discover Haverford to Sunshine Laws acknowledged within the Commonwealth of Pennsylvania.

c. The Township and Discover Haverford acknowledge that this Agreement is not a delegation of any public function of the Township.

d. Notwithstanding the foregoing, the parties hereto acknowledge that federal, state and local laws and regulations may apply to Discover Haverford in regards to its performance of this Agreement, non-profit status under the Internal Revenue Code, corporate records and meeting requirement, lobbying efforts, business licensure and business operations. Compliance with these laws and regulations is the sole responsibility of Discover Haverford.

ARTICLE 6 – DURATION OF AGREEMENT

- a. The term of this Agreement begins January 1, 2025 and ends December 31, 2026.
- b. Either party may terminate this Agreement upon one hundred and eighty (180) days written notice to the other of its intention to terminate.
- c. Any notice required or allowed hereunder shall be in writing and sent by certified mail, return receipt requested, or in person with proof of delivery, to the address first listed above, or such other address as either party shall have specified by written notice to the other party delivered in accordance herewith.

ARTICLE 7 - ASSIGNMENT

Discover Haverford shall not assign any rights or duties under this Agreement to any party without the prior written consent of the Township.

ARTICLE 8 - NONDISCRIMINATION

Discover Haverford shall not discriminate against any employee or person served under this Agreement on account of race, color, sex, age, religion, ancestry, national origin, handicap or marital status, or as otherwise prohibited by applicable law.

ARTICLE 9 - MISCELLANEOUS

- a. This Agreement may be modified or amended by mutual written agreement of the parties, duly executed by both parties. Any additional services such as grant award administration will be governed under separate and specific Agreements.
- b. This Agreement contains all the terms and conditions agreed upon by the parties.
- c. This Agreement shall be governed by and construed in accordance with the laws of the Commonwealth of Pennsylvania. The venue of any legal action to enforce or interpret this Agreement shall be in Delaware County, Pennsylvania.
- d. This Agreement shall inure to the benefit of and shall be binding upon the parties hereto and their respective successors and assigns.
- e. In the event any provision of this Agreement shall be held invalid or unenforceable by a court of competent jurisdiction, such holding shall not invalidate or render unenforceable any other provision hereof.
- f. If any party seeks to enforce or interpret this Agreement through litigation, each party shall bear its own attorney's fees and costs incurred.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement dated this 12th day of November, 2024.

8. Adjourn

Haverford Township

Board of Commissioners

Preliminary Budget Meeting Minutes

Meeting: Monday, November 18th, 2024

Location: Commissioners Meeting Room
1014 Darby Road
Havertown, PA 19083

President of the Board, Larry Holmes, opened the meeting and announced that the Board would present two ordinances directly after the preliminary budget hearing portion of the meeting.

Roll Call - All Commissioners were present at roll call: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta and Holmes.

Also present were Township Manager David R. Burman, Assistant Township Manager Aimee M. Cuthbertson, CPA, and Deputy Police Chief Joe Hagan.

Deputy Chief Hagan led the Pledge of Allegiance.

Citizens' Forum:

There were no speakers or public comment.

Preliminary 2025 Budget Hearing

Commissioner McCloskey moved to adopt a Preliminary General Fund, Sewer Fund, American Rescue Fund, and Capital Fund Budget, including all taxes, fees, service charges, and other revenue sources provided within all funds for 2025. Commissioner Hart seconded the motion. Township Manager David Burman presented on the preliminary budget. Commissioners Hart, McCloskey, Cavender, Gondek, and Holmes had their questions and concerns addressed during the dialogue. Commissioner Gondek voiced his concerns for about 2025 being the third consecutive year of a tax increase, noting the burden on those with fixed incomes. Commissioner Forste-Grupp agreed, but also noted that it is important that the Township maintains the quality and number of services it provides. There were no further comments. 8 Commissioners voted YES: Commissioners Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes. Commissioner Gondek voted NO. The motion passed 8-1.

Ordinance No. P15-2024—2025

Commissioner McCloskey moved to adopt the first reading of Ordinance No. P15-2024—2025, fixing the annual sewer rental or charge for each property connected to the sewer at \$5.15 per 1,000 gallons of water consumed or used by said property. Commissioner Cavender seconded the motion. President Holmes explained that, per the budget presentation, the increase would account for operating costs. Commissioner Gondek voiced that the increase is unfortunate because it is unavoidable if the sewers are to be properly maintained. Commissioner McCloskey said the pipes should be maintained to prevent stormwater infiltration, which would lower costs. President Holmes agreed and added that the increase will also help account for illegal or unauthorized sewer hookups. There were no further comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Ordinance No. P16-2024—2025

Commissioner McCloskey moved to adopt the first reading of Ordinance No. P16-2024—2025, fixing the Township of Haverford Trash Fee at \$283.00 per year. Commissioner Trombetta seconded the motion. Commissioner McCloskey mentioned that to keep the fee down, residents should partake in the glass recycling program. Commissioner Cavender agreed, commenting that the cost is much better than a commercial trash company. There were no further comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Contract Awards

Commissioner Gondek moved to award the Plumbing Construction Contract in the amount of \$362,000 for the Skatium Locker Room Renovation Project to LGB Mechanical, Inc., submitting the lowest responsible bid. Commissioner Quinn seconded the motion. Commissioner Forste-Grupp voiced her excitement that the girls will get equal locker room space. There were no further comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Forste-Grupp moved to award a contract in the amount of \$375,194.79 to Applied Video Technology, Inc., for the audio-visual systems to be installed in the newly renovated library under CoStars contract #034-E23-182. Commissioner Trombetta seconded the motion. Commissioner Forste-Grupp explained that the installation is within the budget and will outfit several rooms in the library. There were no further comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

With no further business, the meeting adjourned.

Township of Haverford

Ordinance No. P15-2024

(Formatted for Accessibility)

An Ordinance of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, authorizing the imposition of an annual sewer rental or charge to each property connected to the public sewer, and establishing penalties for non-payment thereof.

Now, therefore, it is hereby ordained and enacted that:

Section 1: The Board of Commissioners does hereby establish a fee of Five Dollars and Fifteen cents (\$5.15) per one thousand (1000) gallons of water used by properties (as reported by the water supplier for the period 10/1/2023 through 9/30/2024) connected to the public sewage system of the Township as the sewer rental or charge for the calendar year 2025.

Section 2: A two percent (2%) discount shall be allowed if the bill is paid on or before sixty (60) days from the date of the bill. If the discount period is disregarded, the face amount of all bills shall be payable on or before one hundred and twenty (120) days from the date of the bill. Sewer rents or charges shall be a lien against the property serviced by the Township until said sewer rents or charges are paid. Failure on the part of the Township to remit a bill due to administrative error or federal postal delivery problems does not exonerate the property owner from paying the sewer rental or charge nor from penalties imposed. If said bills are not paid on or before one hundred and twenty (120) days from the date of the bill, a penalty of ten percent (10%) shall be added. It shall be the duty of the Director of Finance during or after the twelfth month following the month in which bills were mailed to certify the unpaid bills to the Township Solicitor, who shall proceed to collect such delinquent sewer rentals or charges together with penalties and costs accrued thereon in addition to any attorney fees by filing a lien in the Office of Judicial Support of the Court of Common Pleas of Delaware County, Pennsylvania.

Section 3: Any Ordinance or part of Ordinance to the extent that it is inconsistent herewith is hereby repealed.

Adopted this 9th day of December, 2024.

Township of Haverford

Township of Haverford

Ordinance No. P16-2024

(Formatted for Accessibility)

An Ordinance of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, authorizing the imposition of an annual fee for the collection of garbage, rubbish, and refuse materials, and establishing penalties for non-payment thereof.

Now, therefore, it is hereby ordained and enacted that:

Section 1: The Board of Commissioners does hereby establish a fee of Two Hundred Eighty-Three Dollars (\$283.00) for the calendar year 2025 to be charged to the owner of record of a residential building containing between one (1) and four (4) dwelling units for the purpose of collecting garbage, rubbish, and other refuse materials.

Section 2: The fee does not apply to commercial or industrial establishments and/or apartment units exceeding four (4) dwelling units as these properties are not eligible for service by the Township of Haverford.

Section 3: A two percent (2%) discount shall be allowed if the bill is paid on or before sixty (60) days from the date of the bill. If the discount period is disregarded, the face amount of all bills shall be payable on or before one hundred and twenty (120) days from the date of the bill. Trash fees shall be a lien against the property serviced by the Township until said trash fees are paid. Failure on the part of the Township to remit a bill due to administrative error or federal postal delivery problems does not exonerate the property owner from paying the trash fee nor from penalties imposed. If said bills are not paid on or before one hundred and twenty (120) days from the date of the bill, a penalty of ten percent (10%) shall be added. It shall be the duty of the Director of Finance during or after the twelfth month following the month in which bills were mailed to certify the unpaid bills to the Township Solicitor, who shall proceed to collect such delinquent trash fees together with penalties and costs accrued thereon in addition to any attorney fees by filing a lien in the Office of Judicial Support of the Court of Common Pleas of Delaware County, Pennsylvania.

Section 4: Any Ordinance or part of Ordinance to the extent that it is inconsistent herewith is hereby repealed.

Adopted this 9th day of December, 2024.

RE: Haverford Township Skatium Renovation Project- Bid Results

Mr. Burman,

On October 24, 2024, the bids for the Haverford Township Skatium Renovation Project were received and publicly read aloud at the Haverford Township Municipal building. Below is a summary of the four low Prime Contractors' base bid amounts. The bids have been reviewed by the Township's Solicitor who confirmed all the paperwork submitted in the bids are in compliance with the project specifications. In addition, all of these contractors have meet the requirements of the Responsible Contractor Ordinance as confirmed by the Township's Solicitor. We recommend the Board of Commissioners approve moving forward with the contracts as shown below.

General Construction Contract

S.B. Conrad, Inc.- Base bid \$739,833.00. There are no Alternates for this contract.

Mechanical Contract

Myco Mechanical, Inc.- Base bid is \$212,000.00. There are no Alternates for this contract.

Plumbing Contract

LGB Mechanical, Inc.- Base bid is \$362,000.00. There are no Alternates for this contract.

Electrical Contract

AJM Electric, Inc.- Base bid is \$236,680.00. There are no Alternates for this contract.

Total Hard Cost for Construction for the four Prime Contracts is \$1,550,513.00

Please let us know if you have any additional questions. We look forward to getting the project moving forward!

Sincerely,

Kenneth C. Matthews

RE: Haverford Township Free Library Renovation & Addition Project- Applied Video Technology, Inc.-
Audio Visual

Mr. Burman,

In coordination with the Library, Bernardon and Convergent (Audio Visual Consultant) a detailed scope of work was designed for the audio-visual systems to be installed in the newly renovated Library. We then reached out to three reputable audio-visual Costars firms for proposals that are attached for reference.

After reviewing the proposal with the Library, design team and Convergent, Applied Video Technology, Inc. (AVT) was determined to be the lowest qualified bidder. Attached please find AVT's proposal to furnish, install and program the audio-visual equipment throughout the Library building. We recommend the Township approve moving forward with AVT in the amount of **\$375,194.79 (Three hundred seventy-five thousand one hundred ninety-four dollars and seventy-nine cents)**. Please note that this cost fits within the approved project budget for audio visual scope of work.

Please let us know if you have any questions or comments.

Sincerely,

Kenneth C. Matthews

CENERO NOTES

*Training is charged according to what room type a particular room is, and the charge is pro-rated across all identical rooms of that type, therefore the higher the quantity of rooms, the smaller the per room training charge.

**Sales Tax is presented as the amount of tax Cenero will collect from the client on behalf of the government, which is only applicable in AZ, CA, CT, D.C., FL, GA, IL, IN, IA, KY, MD, MA, MI, MN, NC, NJ, NY, OH, PA, SC, TN, TX and VA. For all other locations, the client will have to pay sales tax to the government directly.

Motion to adopt the second reading of Ordinance No. P14-2024 establishing Parking Time Limited zones at Polo Field, 109 County Line Road and establishing Special Purpose Parking zones in front of 65 Rodmor Road.

Ordinance No. P17-2024 – Zoning Amendments (1st Reading)

Motion to adopt the first reading of Ordinance No. P17-2024 amending Chapter 182, Zoning, Section 182-106.B to provide for new definitions related to Buildings, Structures and Lots; Section 182-711 related to Accessory Building and Accessory Structure Regulations; and Section 182-802 related to Nonconforming Uses, Buildings and Structures.

13. Resolutions:

Resolution No. 2418-2024 - Quadrangle Art Studio Addition Land Development Plan

Motion to adopt Resolution No. 2418-2024 granting Preliminary/Final Land Development Plan approval for a building addition to Art Studio Building at the Quadrangle, 3300 Darby Road, Havertown.

Resolution No. 2421-2024 - LSA Grant App (Plate Readers)

Motion to adopt Resolution No. 2421-2024 requesting a Statewide Local Share Account grant in the amount of \$320,425 from the Commonwealth Financing Authority to be used for the purchase of Platelogiq License Plate Reader Technology and the subsequent installation at ten intersections within the Township of Haverford in obtaining the requested grant.

Resolution No. No. 2422-2024 - LSA Grant App (Police Vehicles and Equipment)

Motion to adopt Resolution No. 2422-2024 requesting a Statewide Local Share Account grant in the amount of \$144,238.10 from the Commonwealth Financing Authority to be used for the purchase of two (2) Chevy Tahoe Vehicles and accompanying police radio, vehicle equipment, and emergency lighting to be used for law enforcement within the Township of Haverford in obtaining the requested grant.

Resolution No. No. 2423-2024 - ARPA Continued Restoration Along Darby Creek

Motion to adopt Resolution No. 2423-2024 authorizing an allocation of \$26,900 from the Township's American Rescue Plan Fund allocation for the continued streambank restoration along the Darby Creek Trail in the vicinity of Jack McDonald Field, including clearing invasive weeds and dead vegetation, control of herbaceous and woody regrowth, and the spreading of a native seed mix throughout the area.

Resolution No. No. 2424-2024 - ARPA Final Obligations

Motion to adopt Resolution 2424-2024 obligating any remaining unobligated and unpaid funds as of December 31, 2024, for the renovation project at the Haverford Township Free Library for which construction contracts were originally awarded on October 30, 2023 and purchasing contracts for furniture and audio visual equipment were originally awarded on November 12, 2024 at public meetings of the Board of Commissioners.

Resolution No. No. 2425-2024 – ARPA Parks & Recreation Projects

Motion to adopt Resolution No. 2425-2024 authorizing the following allocations from the Township’s American Rescue Plan Fund: \$25,000 to be allocated for forty (40) trees at Brookline Park; \$49,922 to be allocated for fencing at Brookline Park; \$18,963 to be allocated for pre-school playground equipment at Brookline Park; \$10,472 to be allocated for replacement climbing structures at various parks; \$44,911 to be allocated for replacement composite preschool play equipment at various parks; and, \$20,972 to be allocated for one replacement “Mighty Descent” slide.

Resolution No. No. 2426-2024 – ARPA Comprehensive Plan Implementation

Motion to adopt Resolution No. 2426-2024 authorizing an amount not to exceed \$225,000 from the Township’s American Rescue Plan Fund allocation to engage a consultant to implement the Township’s soon-to-be completed Comprehensive Plan through a rewrite of the Haverford Township Zoning Ordinance, including a review of previous planning initiatives; diagnosis of the current Zoning Ordinance; evaluation of existing neighborhoods, corridors, zoning districts and overlays; administering public outreach, meetings and workshops; documentation and adoption.

Resolution No. No. 2427-2024 – LSA Grant App Pickup Truck (Manoa Fire Company)

Motion to adopt Resolution No. 2427-2024 requesting a Statewide Local Share Account grant in the amount of \$70,366.06 from the Commonwealth Financing Authority to be used for the purchase of one (1) Pickup Truck for the Manoa Fire Company in obtaining the requested grant.

Resolution No. 2428-2024 – LSA Grant App Cobbs Creek Streambank Restoration

Motion to adopt Resolution No. 2428-2024 requesting a Statewide Local Share Account grant in the amount of \$994,500 from the Commonwealth Financing Authority for the stabilization of approximately 1,000 LF of severely eroded streambank along sections of Cobbs Creek in Haverford Township in obtaining the requested grant.

Resolution No. 2429-2024 – LSA Grant App ADA Improvements (Manoa & Woodland)

Motion to adopt Resolution No. 2429-2024 requesting a Statewide Local Share Account grant in the amount of \$244,530 from the Commonwealth Financing Authority for the installation of a Pedestrian Activated Rectangular Rapid-Flashing Beacon (RRFB) at Manoa Road and Woodland Drive in obtaining the requested grant.

Resolution No. 2430-2024 – Establishing the 2025 Public Meetings Schedule

Motion to adopt Resolution No. 2430-2024 establishing and announcing public meetings of the Township of Haverford for calendar year 2025.

Resolution No. 2431-2024 – ARPA Traffic Signal Upgrades at Darby & Manoa

Motion to adopt Resolution No. 2431-2024 authorizing an amount not to exceed \$17,600 from the Township’s American Rescue Plan Fund allocation for ADA Traffic Signal Upgrades (audible pedestrian signals) at Darby Road & Manoa Road.

14. Stipulations and Agreements:

Tax Assessment Stipulations:

Motion: to approve the following Settlements and Stipulations of Counsel in the matter of owner initiated property tax assessment appeals:

For property located at 17 Woodcroft Road (D.C. Folio #22-04-00719-00) pending in the Court of Common Pleas of Delaware County, No. 2020-009104 and authorize Counsel and proper officers of the Board to execute necessary documents;

For property located at 217 E. Benedict Avenue (D.C. Folio #22-03-00194-00) pending in the Court of Common Pleas of Delaware County, No. 2024-006212 and authorize Counsel and proper officers of the Board to execute necessary documents;

Township of Haverford

Ordinance Number P17-2024

(Formatted for Accessibility)

An Ordinance of Haverford Township, Delaware County, Pennsylvania, amending Chapter 182, Zoning, Section 182-106.b to provide for new definitions related to buildings, structures and lots; section 182-711 related to accessory building and accessory structure regulations; and section 182-802 related to nonconforming uses, buildings and structures.

Whereas, the Home Rule Charter of the Township of Haverford (“Township”), the Pennsylvania First Class Township Code, and the Pennsylvania Municipalities Planning Code, 53 P.S. § 10101, et seq. (“MPC”), authorizes the Haverford Township Board of Commissioners (“Board”) to make and adopt ordinances consistent with the constitution and laws of this Commonwealth and with the Haverford Township Charter (“Charter”) when necessary for the proper management, care and control of the Township and the maintenance of peace, good government, health and welfare of the Township and its citizens; and

Whereas, the Board has met the procedural requirements of the MPC and the Charter for the adoption of the proposed ordinance, including advertising, submission to the planning commissions, and holding a public hearing; and

Whereas, to protect the health, safety, and welfare of the residents and visitors of Haverford Township, and to arrange for the orderly development, zoning, and use of properties within the Township, the Board desires to amend its Zoning Code to provide revisions pertaining to nonconforming uses, building and structures and accessory building and accessory structure requirements;

Now, Therefore, be it **Ordained** and **Enacted** by the Haverford Township Board of Commissioners, Chapter 182, Zoning, or Haverford Township Code of Ordinances shall be amended pursuant to the sections as set forth below:

Section I: Amendments of the Code. The Haverford Township Code of Ordinances, Chapter 182, Zoning, is hereby amended as follows:

Amendment A. Section 182-106.B, Definitions and word usage; interpretation of regulations, is hereby amended to delete the definition of “Nonconforming Building or Structure,” and to provide for the following amended and/or new definitions:

Abandonment

If a nonconforming use of land or building or structure ceases operations for a continuous period of more than six months, then this shall be deemed to be an intent to abandon such

use.

Accessory Structure

Any building or other structure that is related to an accessory use and is located on the same lot as a principal permitted use, such as but not limited to sheds, fencing, walls, tennis courts, basketball courts, swimming pools, pavements and other stationary man-made structures.

Building

Any structure having enclosed walls and roof, attached decks shall also be included, and intended for supporting or sheltering a use or occupancy, either buried in or attached to the land, including mobile homes.

Building Coverage

The footprint of a building, and attached decks, measured by the horizontal cross section at its greatest outside dimensions, excluding cornices, steps, awnings, eaves, gutters or chimneys and overhangs projecting not more than 18 inches.

Garage, Private

A building accessory to a principal building, used for storage of motor vehicles and other personal items, and in which no business, service or industry, whether connected directly or indirectly with motor vehicles, is conducted, provided that private garage shall be used only by the occupant or owner of the premises.

Lot Line

The boundary that legally and geometrically demarcates a lot.

Nonconforming Building

A building that does not currently comply with the applicable area and bulk requirements of this chapter or any amendment hereto where such building lawfully existed prior to the enactment of this chapter or amendment.

Nonconforming Structure

A structure or part thereof that does not currently comply with the applicable provisions of this chapter or amendment hereto, where such structure was lawfully in existence prior to the enactment of such a code or amendment.

Setback

The distance from the lot line to the point where a building or structure may be constructed (see "YARD").

Street Line

The boundary line of a street right-of-way or easement.

Structure

Any object made by humans having an ascertainable stationary location on or in land or water, whether or not affixed to the land. Exclusions include driveways, walkways, steps and similar structures, as determined by the Zoning Officer.

Amendment B. Section 182-711. Regulations concerning accessory buildings and accessory structures, is hereby amended to provide as follows:

§ 182-711. Regulations concerning accessory buildings and accessory structures.

The following supplemental and general regulations shall be observed in all residential districts and in R-7 Townhouse, R-8 Garden Apartment and R-9 Medium- and High-Rise Apartment Districts where applicable:

- A. No accessory building other than a private garage shall exceed one story or 12 feet in height as measured from the floor/slab to the top of the ridge. Private garages may not exceed one story or 15 feet in height as measured from the floor/slab to the highest point of the roof for flat roofs, to the deck of mansard roofs, and the following height limitations for gable, hip or gambrel roofs:
- (1) A garage with a total width of 18 feet or less shall not exceed 15 feet in height as measured from the floor/slab to the top of the ridge.
 - (2) A garage with a width exceeding 18 feet will be permitted to increase the height of the garage up to 18 feet as measured from the floor/slab to the top of the ridge, provided that the garage shall not exceed one story.
 - (3) Garages in excess of 18 feet in height shall be permitted only when authorized as a special exception by the Zoning Hearing Board in the case of:
 - (a) A building accessory to a permitted church, school or other nonresidential building, subject to the height limitation specified above and further provided that the lot area, building and impervious surface regulations of the underlying district have been met.
 - (b) A residential private garage in excess of 18 feet in height that provides a minimum separation of 20 feet further back from the street line than the rearmost portion of the principal building and is further subject to the following:
 - [1] The Zoning Hearing Board shall find that the proposed building will not provide habitable space.
 - [2] That the proposed height is in keeping with the character of the surrounding neighborhood.
 - [3] That there are no sanitary sewer drain lines or water supply lines to service a second story.

B. Garages and other accessory buildings.

- (1) No private garage or other accessory building may be erected or placed within a front yard, and no such building may be erected in a side or rear yard unless it is entirely separated from the principle building, located at least 10 feet farther back from the front street line than the rearmost portion of the main building, 10 feet from all other buildings and at least five feet from the side and rear property lines of said lot. Notwithstanding the provisions of this subsection, no accessory building may be located in any yard which abuts a street, and nothing in this subsection shall be construed to prohibit the erection of a common or joint garage which is not an integral part of a main building on adjacent lots.
- (2) A garage door is not to exceed seven feet six inches in height and 16 feet in width.
- (3) Private garages larger than 25 feet by 25 feet shall not be permitted, and in no event shall exceed 50% of the area of a principal building on the same lot.

C. Decks and Patios

- (1) Decks. Unless otherwise specified in this chapter, decks may be located, erected or maintained in such a manner that they do not encroach upon any required setbacks of the district in which they are located. Decks on semidetached dwellings may extend from the lot line along the common party wall to within twelve (12) feet of the lot line on the opposite side of the property.
- (2) Patios. Unless otherwise specified in this chapter, patios shall be located, erected or maintained a minimum of five feet from any rear or side yard property line as measured from the edges of any permanent surface.

D. Other Accessory Structures

- (1) Accessory Structures not otherwise regulated may be located, erected or maintained in such a manner that they do not encroach upon any required setbacks of the district in which they are located, provided such accessory structures may not be located, erected or maintained in front of the primary or principal structure on the lot.

Amendment C. Section 182-802. Regulations concerning nonconforming uses or buildings, is hereby amended to provide as follows:

§ 182-802. Regulations concerning nonconforming uses, buildings, and structures.

- A. Continuation. The lawful use of a building, structure, lot or land existing at the effective date of this chapter or subsequent amendment thereto, may be continued so long as they remain otherwise lawful, including subsequent sales of the property.

B. Enlargement of a nonconforming use, building or structure.

- (1) Nonconforming Uses. A nonconforming use of a building or structure shall not be extended, enlarged or added to in any manner unless said use is made to conform to all the regulations of the district in which the nonconforming use is located. However, a nonconforming use of a lot or land may be extended or enlarged when authorized as a special exception by the Zoning Hearing Board and, and provided that:
 - (a) Any such extension or enlargement shall be on the lot occupied by such use at the effective date of this chapter or of any amendment by which such use first becomes nonconforming.
 - (b) No such extension of a nonconforming use shall exceed 50% of the area of the lot or land devoted to such use at the effective date of this chapter or of any amendment by which such use first becomes nonconforming.
 - (c) Any nonconforming use extended shall comply with the provisions of this chapter applicable and related to that use, such as landscaping buffering, off-street parking, etc. but not including area and bulk regulations relating to buildings and structures.
- (2) Nonconforming buildings: If a building is conforming as to use but nonconforming as to area and bulk regulations or off-street parking requirements, said building may be enlarged, altered, or added to, provided that:
 - (a) the enlargement or alteration complies with the area and bulk regulations of the district in which it is located, and
 - (b) the existing building and any addition comply with the off-street parking regulations for the use of the building.
- (3) Nonconforming structures. If a structure is conforming as to use but nonconforming as to area and bulk regulations, said structure may be enlarged, altered, or added to, provided that:
 - (a) the enlargement or alteration complies with the area and bulk regulations of the district in which it is located.
 - (b) the existing structures and any addition comply with the off-street parking regulations for the use of the building.
- (4) Nonconforming lots. A building may be constructed on any lot which was lawful when created and which, prior to the effective date of this chapter, was in separate ownership duly recorded by plan or deed, provided that the area and bulk requirements of this chapter are observed.

C. Discontinuance.

- (1) If a nonconforming use of land or building ceases operations for a continuous period of more than six months, then this shall be deemed to be an intent to abandon such use, and any subsequent use of land or building shall conform to the regulations of this chapter.
- (2) The voluntary demolition, razing, or removal of a nonconforming building or structure, including removal to the foundation of the building, shall be considered an abandonment of the nonconforming building or structure, or the nonconforming portion of such building or structure. In such an instance, a nonconforming structure or building shall not be permitted to be replaced, reconstructed, or rebuilt with another nonconforming building or part thereof in order to otherwise maintain any preexisting nonconformity.

D. Change in use.

- (1) A nonconforming use shall not be changed to any other use, other than a conforming use. If a nonconforming use is discontinued or changed to a conforming use, any future use of such building, structure, lot or portion thereof shall conform with the regulations of this chapter.
- (2) Whenever a zoning district shall be hereinafter changed or amended, any existing nonconforming use in such changed district may be continued.

E. Damage or destruction.

- (1) In the event that a building housing a nonconforming use located in any district is destroyed or partially destroyed by fire, explosion or other cause or otherwise damaged to the extent of 50% or more of the bulk of said building, such nonconforming use shall terminate, and the lot shall thereafter be used or only for a conforming use.
- (2) In any case, whether conforming or nonconforming, the remains of any building so destroyed must be removed from the premises within six calendar months so that the same shall not remain.

Section II: Repealer. All Ordinances or parts of Ordinances inconsistent herewith or in conflict with any of the specific terms enacted hereby, to the extent of said inconsistencies or conflicts, are hereby specifically repealed.

Section III: Revisions. The Haverford Township Board of Commissioners does hereby reserve the right, from time to time, to adopt modifications of, supplements to, or amendments of this Ordinance.

Section IV: Severability. If any section, sentence, clause, phrase or word of this Ordinance shall be declared illegal, invalid or unconstitutional by any Court of competent jurisdiction, such declaration shall not prevent, preclude or otherwise foreclose enforcement of any of the remaining portions of this Ordinance.

Section V: Effective Date. This amendment shall become effective upon the legal date of its adoption.

Section VI: Failure To Enforce Not A Waiver. The failure of Haverford Township to enforce any provision of this Ordinance shall not constitute a waiver by the Township of its rights of future enforcement hereunder

Enacted and Adopted this _____ day of _____, 2024.

Proclamation Honoring The Haverford Middle School Football Team

Whereas, the Haverford Township Board of Commissioners takes great pride in recognizing the outstanding achievements of our local youth, and;

Whereas, the Haverford Middle School Football team has achieved remarkable success, making history with their exceptional performance throughout the season, and;

Whereas, for the first time in Haverford Middle School Football history, this dedicated group of athletes team achieved a perfect record of 7-0, and;

Whereas, the Haverford Middle School Football team became the 2024 undefeated Champions of the Central League, and;

Whereas Ahnaf Omi set a school record for 11 touchdowns in a season and Grady Scholla set a school record for 52 tackles in a season, and;

Whereas, the Haverford Middle School Football team exemplifies the spirit of sportsmanship, dedication, and excellence, serving as role models for our community's youth.

Now, Therefore Be It Resolved by the Board of Commissioners of the Township of Haverford in Delaware County, Pennsylvania, that we extend our heartfelt congratulations and deepest admiration to the Haverford Middle School Football Coaches Kevin Scholla, Jamar Cox, and Larry Armstrong; Team Manager Conner Deets; Team Captains Ian Goldberg, Ben Munderu, Grady Scholla, and Joseph Pigeon; and Teammates Jack Wilson, Jayleb D'Antonio, Phin Rogers, Ben Lane, Jamie Lee, Ahnaf Omi, Maximo DiVincenzo, Phillip Moser, Jared Guess, Wyatt Wagner, Bryce Washington, Liam Baker, Seamus McGowan, Ace McGlynn-Castro, Irvin Tay, Beau Fink, Liam Ticknor, Ashton Smith, Anthony Marano, Griffin O'Donnell, Grady McDonald, Ty McDonough, Mike Mallick, Nicholas Coogan, Gus Hamilton, Luke Wilson, Joe Cirillo, Brian Young, Colin Hunter, Patrick Doyle, Mason Snock, Brody McDonough, Jackson Avazier, Liam Haglund, Matt Diska, Charlie Morrison, Jules Monteleone, Tyler Ingalls, Shane O'Brien for their extraordinary achievements and for bringing pride and joy to our community.

Proclaimed this 9th day of December, 2024.

Township of Haverford

Ordinance Number 3007-2024

An Ordinance of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, authorizing the imposition of an annual sewer rental or charge to each property connected to the public sewer, and establishing penalties for non-payment thereof.

Now, therefore, it is hereby ordained and enacted that:

Section 1: The Board of Commissioners does hereby establish a fee of Five Dollars and Fifteen cents (\$5.15) per one thousand (1000) gallons of water used by properties (as reported by the water supplier for the period 10/1/2023 through 9/30/2024) connected to the public sewage system of the Township as the sewer rental or charge for the calendar year 2025.

Section 2: A two percent (2%) discount shall be allowed if the bill is paid on or before sixty (60) days from the date of the bill. If the discount period is disregarded, the face amount of all bills shall be payable on or before one hundred and twenty (120) days from the date of the bill. Sewer rents or charges shall be a lien against the property serviced by the Township until said sewer rents or charges are paid. Failure on the part of the Township to remit a bill due to administrative error or federal postal delivery problems does not exonerate the property owner from paying the sewer rental or charge nor from penalties imposed. If said bills are not paid on or before one hundred and twenty (120) days from the date of the bill, a penalty of ten percent (10%) shall be added. It shall be the duty of the Director of Finance during or after the twelfth month following the month in which bills were mailed to certify the unpaid bills to the Township Solicitor, who shall proceed to collect such delinquent sewer rentals or charges together with penalties and costs accrued thereon in addition to any attorney fees by filing a lien in the Office of Judicial Support of the Court of Common Pleas of Delaware County, Pennsylvania.

Section 3: Any Ordinance or part of Ordinance to the extent that it is inconsistent herewith is hereby repealed.

Adopted by the Township Board of Commissioners this 9th day of December, 2024.

Township of Haverford

Attest: David R. Burman, Township Manager/Secretary

Township of Haverford

Ordinance Number 3008-2024

An Ordinance of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, authorizing the imposition of an annual fee for the collection of garbage, rubbish, and refuse materials, and establishing penalties for non-payment thereof.

Now, therefore, it is hereby ordained and enacted that:

Section 1: The Board of Commissioners does hereby establish a fee of Two Hundred Eighty-Three Dollars (\$283.00) for the calendar year 2025 to be charged to the owner of record of a residential building containing between one (1) and four (4) dwelling units for the purpose of collecting garbage, rubbish, and other refuse materials.

Section 2: The fee does not apply to commercial or industrial establishments and/or apartment units exceeding four (4) dwelling units as these properties are not eligible for service by the Township of Haverford.

Section 3: A two percent (2%) discount shall be allowed if the bill is paid on or before sixty (60) days from the date of the bill. If the discount period is disregarded, the face amount of all bills shall be payable on or before one hundred and twenty (120) days from the date of the bill. Trash fees shall be a lien against the property serviced by the Township until said trash fees are paid. Failure on the part of the Township to remit a bill due to administrative error or federal postal delivery problems does not exonerate the property owner from paying the trash fee nor from penalties imposed. If said bills are not paid on or before one hundred and twenty (120) days from the date of the bill, a penalty of ten percent (10%) shall be added. It shall be the duty of the Director of Finance during or after the twelfth month following the month in which bills were mailed to certify the unpaid bills to the Township Solicitor, who shall proceed to collect such delinquent trash fees together with penalties and costs accrued thereon in addition to any attorney fees by filing a lien in the Office of Judicial Support of the Court of Common Pleas of Delaware County, Pennsylvania.

Section 4: Any Ordinance or part of Ordinance to the extent that it is inconsistent herewith is hereby repealed.

Adopted by the Township Board of Commissioners this 9th day of December, 2024.
Resolved this 9th day of December, 2024.

Township of Haverford

By: C. Lawrence Holmes, Esq., President

Attest: David R. Burman, Township Manager/Secretary

Township of Haverford

Ordinance Number 3009-2024

An Ordinance of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, establishing the Property Tax rate for 2025.

Now, therefore, it is hereby ordained and enacted that:

Section 1: The Board of Commissioners does hereby an establish the property tax rate for the year 2025 at 4.545 mills.

Section 2: A two percent (2%) discount shall be allowed if the bill is paid on or before sixty (60) days from the date of the bill. If the discount period is disregarded, the face amount of the bill shall be payable on or before one hundred and twenty (120) days from the date of the bill. Failure to receive tax bill does not relieve any property owner from the payment of taxes imposed by the Township of Haverford, nor does failure to receive tax bill entitle property owner to discount or remission of penalty.

If said bill is not paid on or before one hundred and twenty (120) days from the date of the bill, a penalty of ten percent (10%) shall be added. All unpaid property taxes as of December 31, 2025 will be turned over to Delaware County Tax Claim Bureau for collection.

Section 3: Any Ordinance or part of Ordinance to the extent that it is inconsistent herewith is hereby repealed.

Adopted by the Township Board of Commissioners this 9th day of December, 2024.

Township of Haverford

By: C. Lawrence Holmes, Esq., President

Attest: David R. Burman, Township Manager/Secretary

Township of Haverford

Ordinance Number 3010-2024

An Ordinance of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, Appropriating Funds for the 2025 Operation of Government.

Now, therefore, it is hereby ordained and enacted that:

Section 1: To appropriate funds for the specific purpose of financing the municipal government for the year 2025 including all taxes, fees, service charges and other revenue sources provided within all funds.

Section 2: Appropriations by Fund:

General Fund Appropriations	\$54,813,192
American Rescue Plan Appropriations	\$10,005,353
Sanitary Sewer Appropriations	\$5,591,140
Capital Projects Appropriations	\$20,082,822

Section 3: Any Ordinance or part of Ordinance to the extent that it is inconsistent herewith is hereby repealed.

Adopted by the Township Board of Commissioners this 9th day of December, 2024.

Township of Haverford

Attest: David R. Burman, Township Manager/Secretary

Haverford Township Board of Commissioners Regular Meeting Minutes

Meeting: Tuesday, November 12, 2024

Location: Commissioners Meeting Room
1014 Darby Road
Havertown, PA 19083

President of the Board, Larry Holmes, opened the meeting and announced that the Board met in Executive Session to discuss litigation immediately prior to this meeting, and there was no work session held prior for the month of November.

Roll Call - All Commissioners were present at roll call: Commissioners Gondek, Forst-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta and Holmes.

Also present were Township Manager David R. Burman, Township Solicitor John Walko, Esq., Assistant Township Manager Aimee M. Cuthbertson, CPA, Chief of Police John Viola, Paramedics Deputy Chief Victor Berg, Director of Community Development Jaime Jilozian, Parks and Recreation Director Brian Barrett, and David Pennoni, Pennoni Associates.

Chief Viola led the Pledge of Allegiance.

Presentation:

Ice Rink Advisory Board Project Summary

Barbara Latsios, an Ice Rink Advisory Board member, summarized the proposed renovations for the Skatium locker rooms. The plans would include locker rooms for mixed-gender teams, a locker room for referees and a vanity area for ice skaters. The project is expected to be completed by the summer of 2025. She thanked the Board of Commissioners for their support of the project.

Citizens' Forum:

Peter Diskin voiced his concerns about the traffic study results and enforcement of law, noting especially the danger of the intersection of Colfax and Darby.

Mike Lee also spoke of the traffic study and the proposed Resolution 2407-2024, questioning how state roads would be regulated through the Resolution.

Dori Doughty asked the Board to postpone voting on Resolution 2407-2024 so that the Board may receive more feedback from the community.

Donna Rabina thanked the Township for their work but pointed out the poor paving quality of utility companies after completing work under roads. She asked the Board to potentially modify the ordinance regulating road openings to not allow half-paving to refinish roads.

Jim DeMarco voiced his frustration at the noise from the pickle ball courts at Paddock Park. He suggested either using soft balls on the courts or moving the courts altogether.

Jeremy Beha endorsed the renovation of the Skatium.

Jeff Brody also endorsed the renovation of the Skatium.

Paul Kelly asserted that the Township was violating its own noise ordinance at the pickle ball courts.

Adam Terranova supported the Skatium renovation project.

Chris Beer voiced his worries about the traffic study and supported the idea that the roads are dangerous for children.

Beverly Byer, a crossing guard at the Township, voiced her concerns about reckless driving in the Township.

Victor Cortese also noted the results of the traffic study.

Will Hitchcock discussed the storm water ordinance, citing concerns about water runoff from one property to another.

Bureau of Fire Update:

Commissioner Gondek reported for October of 2024. Total incidents were 86: 73 in the Township and 13 out of the Township. The average personnel per call are 20. There were 1,727 personnel hours committed to incidents. 1,006 personnel hours committed to training, and the Havertown County Bureau of Fire provided mutual aid to 4 working fires within Delaware County.

Township Auditor Update

Township Auditor Anderson reported that he has reviewed the warrants and expenditures, found no irregularities, and all of his questions were answered to his satisfaction. He also noted that he hoped the street study took account for electric scooters and bicycles.

Township Manager Update

Township Manager Burman provided an update on the Darby Creek Trail, noting that Phase 2 of the southern extension by Merry Place will begin this week and compromise parking for 4-6 weeks. He also provided an update on the leaf collection schedule. He highlighted the tree planting at Thompson Track off Eagle Road. Finally, he announced that the Township email system has been down for the last 48 hours, and to have patience while the issue is resolved. Commissioner Holmes noted that the email system issue is also affecting the Commissioners, and Commissioner Gondek added that some emails may be permanently lost, and residents should use an alternate email or a phone number to reach out to their Commissioners.

Approval of Minutes:

Commissioner Quinn moved to approve the Regular Meeting Minutes of October 1st, 2024. Commissioner Hart seconded. Commissioner Trombetta asked to amend the minutes to add that P8-2024 was tabled. Commissioner Gondek moved to approve the amended Minutes and Commissioner Hart seconded. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner McCloskey moved to approve the following warrant #11-2024 totaling \$5,684,684.46:

Description	Amount
General & Sewer fund Payroll warrant for October 24, 2024, in the amount of	\$837,479.08
General & Sewer fund Payroll warrant for November 7, 2024, in the amount of	\$801,124.06
General Fund disbursements in the amount of	\$1,256,923.17
Sewer Fund disbursements in the amount of	\$278,279.56
Community Development Block Grant Fund disbursement in the amount of	\$53,927.55
Capital Projects Fund disbursement in the amount of	\$1,490,973.25
American Rescue Plan Fund disbursement in the amount of	\$950,223.62
Credit Card Statement ending October 27, 2024, in the amount of	\$15,754.17

Commissioner Cavender seconded the motion. There were no comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender,

Quinn, Hart, McCollum, Trombetta, Holmes.

Ordinances and Resolutions:

Commissioner Trombetta moved adopt the first reading of Ordinance No. P8-2024, amending Chapter 78, Erosion and Sediment. Commissioner Hart seconded the motion. Commissioner Trombetta asked for an explanation of self-regulation, which Commissioner Holmes explained was a way to create a system of plan approvals to go through the proper channels. Commissioner Gondek asked to confirm the final number of square feet required to necessitate a storm water management plan. Mr. Pennoni confirmed it would be set at 500 square feet. Commissioner Holmes explained that it was a way to ensure better planning for water runoff. Commissioner Gondek proposed to amend the ordinance to set the number of square feet to 1,000. Commissioner McCloskey objected, citing concerns about storm water running into neighboring properties. Commissioner Trombetta also rejected the amendment. Commissioner Holmes claimed that 500 square feet disproportionately affected people who owned small parcels, as it would make home improvements more difficult. Commissioner McCloskey noted a financial strain on the Township to have to redo storm water management. Commissioner Gondek agreed, citing aging infrastructure. Commissioner Forste-Grupp asserted her approval for the ordinance as it is. 5 Commissioners voted YES: Commissioners, Forste-Grupp, McCloskey, Cavender, Hart, Trombetta. 4 Commissioners voted NO: Commissioners Gondek, Quinn, McCollum, Holmes. The motion passed 5-4.

Commissioner Forste-Grupp moved to approve a second reading of Ordinance No. P13-2024, establishing stop intersections on Woodbine Road North at the intersection of Washington Avenue and on Paddock Road at the intersection of Marrybrook Drive, and special purpose parking zones in front of 606 Darby Road. Commissioner Gondek seconded the motion. There were no comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Cavender moved to adopt a first reading of Ordinance No. P14-2024, establishing timed parking zones at Polo Field, 109 County Line Road, and establishing special purpose parking zones in front of 65 Radnor Road. Commissioner Trombetta seconded the motion. Commissioner Cavender asked if it made sense to limit cars from parking in the bus zone at Polo Field. Chief Viola agreed that it did. Commissioner Cavender then moved to amend the Ordinance so that the Polo Field timed parking zones would be for school buses only from March to May from 3:00PM to 6:00PM on Mondays through Fridays. Commissioner Trombetta seconded the amendment. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Gondek moved to adopt Resolution No. 2402-2024, authorizing an additional \$1,475,000 from the American Rescue Plan Act to purchase emergency apparatuses as approved at the Board of Commissioners November 13, 2023 meeting. Commissioner Trombetta seconded the motion. Commissioner Gondek asked Township Manager Burman to refresh the public on the decision. Township Manager Burman explained that the purchase of the fire apparatuses was approved last year, and the best funding source was determined to be from the American Rescue Plan Act funds. He added that the purchases are in accordance with the realignment of the fleet as outlined in the previous fire audit. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Quinn moved to adopt Resolution No. 2407-2024, adopting the Township-wide Safety Action Plan using the Safe Systems Approach. This Resolution would permit the Township Manager to implement demonstration projects outlined in the Safety Action Plans to test safety interventions on selected Township Roads. Commissioner Trombetta seconded the motion. Commissioner Gondek noted that several speakers came to discuss the project, and so he clarified that there were two main outcomes from the Resolution: the first being that the Township is adopting and promising to reduce the number of injuries and death by a certain point in time, which is required by the federal government in order to secure certain grants. The second main outcome is that it allows the Township Manager to implement some demonstrations of public safety in the Township. Commissioner McCloskey agreed and added that none of the comments made today would not be able to be considered if the resolution was to pass, so it should be passed in order to move forward with traffic safety projects. Commissioner Forste-Grupp agreed to pass the Resolution and agreed to future discussion of solutions. Commissioner Trombetta moved to table the motion for a month in order to receive more input from the community. Commissioner Quinn seconded the motion. Commissioner Trombetta rescinded her motion in order for the Board to further discuss. Commissioner Holmes agreed that tabling the Resolution was the best course of action. Commissioner McCloskey disagreed, arguing that all the Resolution does was to agree to set a goal and allow for testing of plans. Commissioner Forste-Grupp added that the Resolution would allow the community to experience proposals for safer streets, which would also allow for more discussion and feedback. Commissioner Gondek asked what mechanism is in place to allow the topic to be discussed in subsequent meetings. Commissioner Holmes stated that anything can be put on an agenda without needing action to be taken. The topic can be put in future agendas to allow CH Planning and the comment to answer and ask questions about it. Commissioner Cavender also added that in the meantime, there would be a police presence at the intersection of Manoa and Eagle. Chief Viola mentioned that he was currently trying to have the traffic light readjusted to include a full walk cycle. Commissioner Quinn motioned to table the Resolution. Commissioner Holmes seconded the motion. 4 Commissioners voted YES: Commissioners Gondek, Quinn, Trombetta, Holmes. 5 Commissioners voted NO: Forste-Grupp, McCloskey, Cavender,

Hart, McCollum. The motion did not pass 4-5. With no further discussion, the original motion to adopt the resolution was voted on. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes. Commissioner Gondek asked to put the topic on the December meeting agenda. Commissioner Holmes agreed to have it be the first item for the December Regular Meeting, so public comment could be after.

Commissioner Gondek moved to adopt Resolution No. 2411-2024, authorizing the renovation of the Skatium locker rooms. Commissioner Hart seconded the motion. Commissioner Gondek thanked those involved in the project: The Ice Rink Advisory Board, Assistant Township Manager Aimee Cuthbertson, Township Manager Burman, and other Township employees involved. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2412-2024, authorizing an amount not to exceed \$142,000 from the Township's American Rescue Plan Act fund to refurbish 1 EMA apparatus and \$54,978 for the purchase of 2 Striker power load systems, net of \$88,000, and disposal of current systems. Commissioner Cavender seconded the motion. There were no questions or comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2414, authorizing Township Manager Burman to enter into a service agreement on behalf of the Township with the Commonwealth of Pennsylvania through its Department of Transportation for moving services in Haverford Township as outlined in Exhibits A and B of the attached Comprehensive Maintenance Services Agreement No. 3900040430 covering the period of January 1, 2025 to December 31, 2027. Commissioner Gondek seconded the motion. Commissioner Holmes asked if this was a standard agreement, which Township Manager Burman confirmed. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2415-2024, which would announce a public hearing of the Board of Commissioners on December 9, 2024 at 6:15 to consider an amendment of Ordinance 182 Zoning Section 182 106B to provide for new definitions related to building structures and lots, Section 182 711 related to accessory buildings and accessory structure regulations, and Section 182 8585 related to non-confirming structures. Commissioner Cavender seconded the motion. Commissioner Holmes asked Director of Community Development Jilozian to remind what the amendment would do. Director of Community Development Jilozian said that it would amend non-conformity and clarify more about accessory structures. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender,

Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2416-2024, authorizing application to the 2024 PECO Green Region Open Space Program Bonus Round for the Haverford Township Building Solar Installation Project. Commissioner Cavender seconded the motion. Commissioner Gondek asked to clarify if this Resolution applied to a specific project or just allowed for the application of grants for future projects. Township Manager Burman agreed it was for the latter. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2417-2024, authorizing for reimbursement from the Township's American Rescue Plan Act fund to the Haverford Township General Fund of \$9,240 for emergency sanitary sewer system repairs. 8 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta. Commissioner Holmes was called away from the meeting momentarily and therefore did not vote on this item.

Commissioner Cavender moved to adopt Resolution No. 2418-2024 for preliminary final land development plan approval for 938 square feet of addition and related improvements to the Quadrangle Arts Studio Center at 3300 Darby Road, Havertown, PA, known as DC Folio No. 220401800. Commissioner Hart noted that the applicant asked for a sidewalk waiver, which he opposed due to the need for walkability in the area. Solicitor Walko explained that they requested two additional waivers that morning. Attorney for the Quadrangle George Broseman asked for the waivers due to the undue hardship of a sidewalk project. Commissioner Forste-Grupp asked if the project plans could be projected so the public could see them. Commissioner Holmes called for a 5-minute recess to get the plans displayed. Broseman explained that additional sidewalks were not necessarily due to the internal paths of the Quadrangle. Commissioner Hart noted that modifying to only 100 yards of a pathway would be more cost-effective, but still allow for pedestrian traffic. He asked what the ordinance says about sidewalks, and Solicitor Walko explained that it requires sidewalk around the entire property. Commissioner Hart asked if there were other entrances to the reserve aside from Darby Road for residents. Broseman said that Quadrangle residents do not need access to the reserve due to the amenities provided by the Quadrangle. Commissioner Hart asked Chief Viola if there have been any incidents regarding Quadrangle residents due to a lack of sidewalks, and the Chief said there have not been. Broseman asked if there is a valid pathway that would not be as wide as the proposed sidewalk. Commissioner Hart asked if discussion could be held until both parties decided on an acceptable alternative or on a waiver. Commissioner Quinn moved to table the Resolution. Commissioner Gondek seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Hart moved to adopt Resolution No. 2419, authorizing the use of American Rescue Plan Act funds as follows: Brookline Park Stormwater Management Facilities in the amount of \$237,000; Supplemental Field Lighting at Jack McDonald Field in the amount of \$12,000; Freestanding playground equipment at various parks in an amount not to exceed \$10,000; and, Darby Creek Trail South Expansion Phase 2 in the amount of \$200,000. Commissioner Trombetta seconded the motion. There were no questions or comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to adopt Resolution No. 2420-2024, authorizing the amount of \$23,484 from the American Rescue Plan Act fund for the purchase and installation of security and solar window tinting. Commissioner Cavender seconded the motion. Commissioner Holmes asked what the purpose of the tinting is. Chief Viola explained that it would act as bullet-proofing as well as keep police cooler in the summer. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner McCloskey moved to approve the Parking Lot Licensing Agreement with Karakung Swim Club for the term ending March 1, 2027. Commissioner Trombetta seconded the motion. Commissioner Hart asked if this would decrease parking issues, and Commissioner McCloskey agreed that it would. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Skatium Locker Room Renovation Project Contracts and Agreements

Commissioner Gondek moved to approve the professional services agreement with BKP Architects totaling \$26,500. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Gondek moved to approve the general construction contract with SB Conrad Inc. totaling \$739,000. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Gondek moved to approve the HVAC construction contract with Michael Mechanical Inc. totaling \$212,000. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Gondek moved to approve the electrical construction contract with AJM Electric Inc. totaling \$236,680. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender,

Quinn, Hart, McCollum, Trombetta, Holmes.

Library Renovation Project Contracts and Agreements

Commissioner Forste-Grupp moved to approve a contract with Detwiler Roofing in the amount of \$125,160 to replace the roof of the 1979 portion of the library building which was scheduled to remain under Co-Stars Contract No. 008-E22-762. Commissioner Cavender seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Forste-Grupp moved to approve a contract in the amount of \$836,595.55 with COF Company for the installation of library shelving which was scheduled to remain under Co-Stars Contract No. 035-E23-197. Commissioner Cavender seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Forste-Grupp moved to approve a change order in the amount of \$45,000 with Bernardin LLC. for additional construction administrative services. Commissioner Cavender seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Public Works Contracts

Commissioner Cavender moved to approve a contract totaling \$23,484.37 with National Glazing Solutions, LLC. For the purchase and installation of security and solar tinting in the Haverford Township Administrative building under Co-Stars Contract 020-E23-238 Commissioner Forste-Grupp seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Police Contracts

Commissioner Gondek moved to approve a contract totaling \$41,815.15 for the outfitting and installation of emergency lighting for 2 Chevrolet EV Blazers to Havis, Inc. under Co-Stars Contract 012-E24-365. Commissioner Quinn seconded the motion. Commissioner Hart asked Chief Viola if the Blazers are electric vehicles, which the Chief confirmed were. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Emergency Medical Services Contracts

Commissioner Cavender moved to approve a contract totaling \$142,250 to re-mount and refurbish one Emergency Medical Services chassis to P-Fund Superior Sales under specialized services exemption. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender,

Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Trombetta moved to approve a contract totaling \$54,978.06 for the trade-in and disposal of the current system and purchase of two Striker power load systems to Striker Medical under a specialized services exemption. Commissioner Cavender seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Parks and Recreation Contracts

Commissioner Hart moved to award a contract in the amount of \$237,000 for the Brookline Park Storm Water Facilities Project to Frania Inc. Commissioner Quinn seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Economic Development Contracts

Commissioner Trombetta moved to enter into a formalized professional services agreement with the Discover Haverford for the provision of economic development activities within the business districts of Haverford township from the periods of January 1, 2025 to December 31, 2025 and January 1, 2026 to December 31, 2026 for the fixed fee of \$110,000 and \$115,000, respectively. Commissioner Gondek seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner McCloskey moved to approve a change order in the amount of \$13,509.50 for the Darby Road Streetscape Phase 3 Project to Cooper Electric due to changes in PENNDOT's new specifications for light fixture on state highways. Commissioner Trombetta seconded the motion. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Continuation of Citizen's Forum for Non-Agenda Items:

Michele Alvare asked about storm water management in basketball courts and supported Commissioner McCloskey's proposal for a 500 square feet requirement for storm water management plans because her neighbors put in patios and now her basement floods.

A resident asked if the sound study result data could be shared. Commissioner Holmes said it would be looked into.

A resident asked to hear more about the road safety plan.

A resident voiced concerns about dangerous delivery drivers and asked about either considering an ordinance or petitioning the state.

Sharon voiced serious concerns about road safety and accounted her experience of being seriously injured in an accident.

Tevin voiced concerns about wrong-way drivers at the mechanical plant at the intersection of West Chester Pike and Darby Road. He also voiced his frustration of the long meeting length.

Robert Dell voiced disappointment and anger toward Commissioner Holmes' post on social media after the presidential election.

Michael McNally reported issues of abandoned cars on East County Line Road that prevented residents from parking.

New Business: None.

Other Business:

Under other business, each of the Commissioners offered their comments as follows:

Commissioner Gondek echoed his earlier statement about the don email system. He also reminded that the last leaf pickup for his ward would take place the week of thanksgiving, so residents should have their leaves on the curb on November 25 by 6:00AM. He noted that a burn ban was currently in effect. He thanked everyone for the approval of the Skatium and wished everyone a happy Thanksgiving

Commissioner Forste-Grupp also reminded residents of the leaf pickup. She congratulated the library on the Dewey Decimal Run and Walk, announcing that 244 residents registered. She thanked Commissioner Hart and Commissioner Cavender for their attendance. She added that it is the responsibility of everyone to keep streets safe. She ended by wishing everyone a happy Thanksgiving.

Commissioner McCloskey congratulated Commissioner Hart for his attendance at the Dewey Decimal Run and Walk. He lamented being unable to attend. It was noted that Commissioner Trombetta and himself are hosting a town hall in the Haverford Township Board Room at 7:00PM. He also announced that the preliminary budget meeting would take place at the Haverford Township Board Room on November 18, and the second vote would be held at the same place on December 9.

Commissioner Cavender noted that the 5th ward's leaf pickup will be on December 9. She also noted that social media is not a valid form of civic engagement and urged

residents to get involved in local government as a proper use of energy.

Commissioner Quinn noted that some streets would be closed due to a 5K. She announced that Winter Fest will be on November 30 from 1:00PM to 6:00PM. She reminded that the 7th ward's leaf collection was this week. She thanked the Haverford Township staff and noted her appreciation for her time as a poll worker.

Commissioner Hart announced that Haverford Township Parks and Recreation received 2 grants totaling \$850,000 for Brookline Park and \$400,000 for the Darby Creek Trail. He thanked Senator Cappaletti for helping apply for the grants. He also announced that leaf collection for the 8th and 9th wards would take place on November 18. The Pennfield Civic center is hosting a happy hour at JD McGillicutty's on November 21. He finally wished everyone a happy Thanksgiving.

Commissioner McCollum echoed Commissioner Hart's leaf collection announcement and added that the second collection would take place from December 16 through 20. He noted that e-waste recycling would take place on November 23. He also noted the downed email system and wished everyone a happy Thanksgiving.

Commissioner Trombetta repeated Commissioner Hart's reminder of the Town Hall meeting. She announced a virtual meeting with the Environmental Protection Agency on November 19 at 6:00PM about the Havertown PCP superfund and groundwater testing. The link to the meeting would be shared with the public. She thanked the Haverford Township Police Department and Discover Haverford for offering 3 days of free parking on November 29, November 30, and December 21 to support small businesses for holiday shopping.

President Holmes reminded the public of the preliminary budget meeting. He then apologized to those he offended, the public, and his colleagues for the rhetoric posted to social media. He had not meant to offend anyone and took full responsibility for his actions. He said that the true meaning of his words is to have hope in America.

With no further business, the meeting adjourned.

Haverford Township

Board of Commissioners

Preliminary Budget Meeting Minutes

Meeting: Monday, November 18th, 2024

Location: Commissioners Meeting Room
1014 Darby Road
Havertown, PA 19083

President of the Board, Larry Holmes, opened the meeting and announced that the Board would present two ordinances directly after the preliminary budget hearing portion of the meeting.

Roll Call - All Commissioners were present at roll call: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta and Holmes.

Also present were Township Manager David R. Burman, Assistant Township Manager Aimee M. Cuthbertson, CPA, and Deputy Police Chief Joe Hagan.

Deputy Chief Hagan led the Pledge of Allegiance.

Citizens' Forum:

There were no speakers or public comment.

Preliminary 2025 Budget Hearing

Commissioner McCloskey moved to adopt a Preliminary General Fund, Sewer Fund, American Rescue Fund, and Capital Fund Budget, including all taxes, fees, service charges, and other revenue sources provided within all funds for 2025. Commissioner Hart seconded the motion. Township Manager David Burman presented on the preliminary budget. Commissioners Hart, McCloskey, Cavender, Gondek, and Holmes had their questions and concerns addressed during the dialogue. Commissioner Gondek voiced his concerns for about 2025 being the third consecutive year of a tax increase, noting the burden on those with fixed incomes. Commissioner Forste-Grupp agreed, but also noted that it is important that the Township maintains the quality and number of services it provides. There were no further comments. 8 Commissioners voted YES: Commissioners Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes. Commissioner Gondek voted NO. The motion passed 8-1.

Ordinance No. P15-2024—2025

Commissioner McCloskey moved to adopt the first reading of Ordinance No. P15-2024—2025, fixing the annual sewer rental or charge for each property connected to the sewer at \$5.15 per 1,000 gallons of water consumed or used by said property. Commissioner Cavender seconded the motion. President Holmes explained that, per the budget presentation, the increase would account for operating costs. Commissioner Gondek voiced that the increase is unfortunate because it is unavoidable if the sewers are to be properly maintained. Commissioner McCloskey said the pipes should be maintained to prevent stormwater infiltration, which would lower costs. President Holmes agreed and added that the increase will also help account for illegal or unauthorized sewer hookups. There were no further comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Ordinance No. P16-2024—2025

Commissioner McCloskey moved to adopt the first reading of Ordinance No. P16-2024—2025, fixing the Township of Haverford Trash Fee at \$283.00 per year. Commissioner Trombetta seconded the motion. Commissioner McCloskey mentioned that to keep the fee down, residents should partake in the glass recycling program. Commissioner Cavender agreed, commenting that the cost is much better than a commercial trash company. There were no further comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Contract Awards

Commissioner Gondek moved to award the Plumbing Construction Contract in the amount of \$362,000 for the Skatium Locker Room Renovation Project to LGB Mechanical, Inc., submitting the lowest responsible bid. Commissioner Quinn seconded the motion. Commissioner Forste-Grupp voiced her excitement that the girls will get equal locker room space. There were no further comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

Commissioner Forste-Grupp moved to award a contract in the amount of \$375,194.79 to Applied Video Technology, Inc., for the audio-visual systems to be installed in the newly renovated library under CoStars contract #034-E23-182. Commissioner Trombetta seconded the motion. Commissioner Forste-Grupp explained that the installation is within the budget and will outfit several rooms in the library. There were no further comments. All 9 Commissioners voted YES: Commissioners Gondek, Forste-Grupp, McCloskey, Cavender, Quinn, Hart, McCollum, Trombetta, Holmes.

With no further business, the meeting adjourned.

Township of Haverford

Ordinance Number P8-2024

(Formatted for Accessibility)

An Ordinance of the Township of Haverford, Delaware County, amending Chapter 78, “Erosion and Sediment Control; Stormwater Management”, to provide for amended erosion and sediment control plan, permit, application, and inspection requirements; to ensure municipal separate storm sewer system compliance with the Pennsylvania department of environmental protection including a reduction of the threshold for a certain Stormwater reviews by the Township for projects involving new impervious surfaces of 500 square feet or more, increase the frequency of bmp inspections, and change the method of Stormwater calculations.

Whereas, the Home Rule Charter of the Township of Haverford (“Township”) and the Pennsylvania First Class Township Code authorize the Haverford Township Board of Commissioners (“Board”) to make and adopt ordinances consistent with the constitution and laws of this Commonwealth and with the Haverford Township Charter (“Charter”) when necessary for the proper management, care and control of the Township and the maintenance of peace, good government, health and welfare of the Township and its citizens; and

Whereas, the Haverford Township Code, Chapter 78, “Erosion and Sediment Control; Stormwater Management”, provides for erosion and sedimentation control and stormwater management requirements for projects and developments in the Township to, in part, better control stormwater runoff in the Township, minimize accelerated erosion and loss of natural infiltration, and to ensure compliance with all commonwealth and federal agencies; and

Whereas, the Board desires to ensure that Chapter 78 complies with all revised Municipal Separate Storm Sewer System requirements from the Pennsylvania Department of Environmental Protection; and

Whereas, the Board desires to amend the thresholds in Chapter 78 that require differing levels of review by the Township for projects involving grading, excavation, and/or the installation of new imperious surfaces; and

Whereas, to protect the health, safety, and welfare of the residents and visitors of Haverford Township, and to arrange for the orderly development, zoning, and use of properties within the Township, the Board of desires to amend Chapter 78 of its Code, in its entirety, to provide revisions pertaining to erosion and sedimentation control and stormwater management plan, permit, application, and inspection requirements;

Whereas, the Board has met the procedural requirements of the Charter for the adoption of the proposed ordinance, including advertising and multiple readings of the ordinance at public meetings; and

Now, therefore, be it Ordained and Enacted by the Haverford Township Board of Commissioners, Chapter 78 of Haverford Township Code of Ordinances shall be amended in its entirety and replaced pursuant to the articles and sections as set forth below:

Section I: Amendments to code. The Haverford Township Code of Ordinances, Chapter 78, "Erosion and Sediment Control; Stormwater Management", is hereby amended to provide as follows:

Chapter 78 Erosion and Sediment Control; Stormwater Management

Article I. Erosion and Sediment Control.

§ 78-1. Short title.

This chapter shall be known and may be cited as the "Township of Haverford Erosion and Sediment Control Ordinance."

§ 78-2. Purpose and Scope.

- A. The purpose of this chapter is to regulate the modification of the natural terrain, the alteration of drainage, the maintenance of artificial structures and surfaces and to provide for certain erosion and sediment control measures within the Township of Haverford so as to assure and safeguard health, safety, ecology and general welfare in the Township of Haverford.
- B. Scope of provisions. New grading, excavations and fills or changes, additions, repairs or alterations made to existing excavations and fills shall conform to the provisions of this chapter, except that this chapter shall not apply to work performed by the Township in a public street or on public property.

§ 78-3. Erosion and sediment control plans required; exceptions.

- A. A grading permit will not be required in the following situation, but in all other respects the provisions of this chapter shall apply:
- B. An excavation which does not exceed three feet in vertical depth at its deepest point measured from the natural ground surface nor cover an area of more than 200 square feet. This exception shall not affect the applicability of this chapter nor the requirement of a grading permit for any fill or grading made with the material from such excavation.

§ 78-4. Permit required.

- A. It shall be unlawful for any person, firm or corporation to pave, fill, strip, grade or regrade any land within the Township of Haverford without first securing a permit as hereunder provided, except as otherwise stated in 78-3.
- B. It shall be unlawful for any person, firm or corporation to disturb, modify, block, divert or affect the natural overland or subsurface flow of stormwater within the Township of Haverford without first securing a permit as hereunder provided.
- C. It shall be unlawful for any person, firm or corporation to construct, erect or install any drainage dam, ditch, culvert, drainpipe, bridge or any other structure or obstruction affecting the drainage of any premises in the Township of Haverford without first securing a permit as hereunder provided.

§ 78-5. Permit Application.

- A. Any person, firm or corporation proposing to engage in an activity requiring a permit hereunder shall apply for a permit by written application on a form furnished by the Township of Haverford.
- B. A separate application shall be required for each grading permit. Two hard copies and one digital copy of the proposed plan, including specifications and timing schedules, shall be submitted with each application for a permit.
- C. Applications for review required under this chapter shall be accompanied by a review fee as fixed by resolution of the Board of Commissioners, which may be amended from time to time.
- D. All applications for a permit involving an area of disturbance greater than 500 square feet shall be accompanied by a escrow deposit, to the benefit of the Township of Haverford in an amount as provided by Township resolution.

§ 78-6. Submission of property plan; information required.

The application for a permit shall be accompanied by a plan of the property showing:

A boundary line survey of the site on which the work is to be performed, showing the existing and proposed contours of the land and the proposed contours after completion of proposed grading.

- A. A description of the features, existing and proposed, surrounding the site which are of importance to the proposed development, including the nature of fill material and trees to be removed as a result of the proposed construction
- B. Description of the type and classification of the soil.
- C. Details and location of any proposed drainage structures and pipes.
- D. The lowest floor elevation of any proposed building based upon North American

Vertical Datum of 1988 and the elevation of the one-hundred-year flood.

- E. The location and description of existing and future manmade features of importance to the proposed development, i.e., cuts and fills, buildings, roads, etc.
- F. Plans and specifications of soil erosion and sediment control measures in accordance with standards and specifications of the Delaware County Conservation District or the Township of Haverford.
- G. A time schedule indicating the anticipated starting and completion dates of the development sequence and the time of exposure of each area prior to the completion of effective erosion and sediment control measures.
- H. All plans and specifications accompanying applications for permits shall include provisions for both interim (temporary) and ultimate (permanent) erosion and sediment control.
 - (1) The design, installation and maintenance of erosion and sediment control measures shall be accomplished in accordance with standards and specifications established by the Delaware County Conservation District as adapted from standards and specifications of the Soil Conservation Service, United States Department of Agriculture.
 - (2) Technical standards for the design and installation of erosion and sediment control measures are on file with the Township of Haverford office, the office of the Delaware, County Conservation District and other governmental agency offices.
 - (3) Standards and specifications adopted for the purposes of this chapter and by the Delaware County Conservation District include but are not limited to the following basic conservation measures:
 - (a) Temporary cover on critical areas.
 - (b) Permanent grass and cover on critical areas on prepared seedbed.
 - (c) Permanent grass and cover on critical areas on unprepared seedbed.
 - (d) Sodding.
 - (e) Mulching.
 - (f) Temporary diversion.
 - (g) Permanent diversion.
 - (h) Grassed waterway or outlet.
 - (i) Grade stabilization structure.
 - (j) Debris basin.

- (k) Drain.
- (l) Drainage, main or lateral.

§ 78-7. Submission of drainage study; contents; disposal of stormwater runoff; soils investigation report.

- A. Stormwater management plans shall be as required in this chapter.
 - (1) The application for a permit shall be accompanied by a plan of the property showing the location of all present and proposed ditches, streams, pipes and other drainage structures and proposed cuts and fills. In addition to showing present elevations and dimensions and location and extent of all proposed grading and/or drainage, the plan shall clearly indicate all buildings, parking areas and driveways. Further, the plan shall indicate the present and proposed sources, storage and disposition of water being channeled through or across the premises, together with elevations, gradients and maximum flow rates. The application shall describe the work to be performed, the materials to be used and the manner or method of performance, including provisions for protecting and maintaining existing drainage facilities whether on public or private property. The applicant shall supply data supporting the plan developed by a registered professional civil engineer or an engineer qualified in hydrology.
 - (2) Stormwater management plans shall be prepared in accordance with this chapter.
- B. The following provisions apply to the carrying and disposal of stormwater runoff:
 - (1) The applicant shall agree to the granting and recording of easements for drainage facilities, including acceptance of the discharge of water on the property of others, provisions for maintenance of slopes and swales and access for the maintenance of anti-erosion facilities.
- C. If load-bearing fill is proposed, a soils investigation report shall be submitted, which shall consist of test borings, laboratory testings and engineering analysis to correlate surface and subsurface conditions with the proposed grading plan. The results of the investigation shall be presented in a report by a registered professional soils engineer or geologist, which shall include data regarding the nature, distribution and supporting ability of existing soils and rocks on the site, conclusions and recommendations to ensure stable soil conditions and groundwater control, as applicable. The Township of Haverford may require such supplemental reports and data as it deems necessary. Recommendations included in such reports and approved by the Township of Haverford shall be incorporated in the plan or specifications.
 - (1) Fills toeing out on natural slopes steeper than four horizontal to one vertical shall not be made unless approved by the Township of Haverford after receipt of a report, deemed acceptable by the Township of Haverford Engineer, by a

registered professional soils engineer certifying that he has investigated the property, made soil tests and that, in his opinion, such steeper slopes will safely support the proposed fill.

- (2) Natural and/or existing slopes exceeding five horizontal to one vertical shall be benched or continuously stepped into competent materials prior to placing all classes of fill.

§ 78-8. Issuance of permit.

Upon the submission of an application which conforms to the provisions of this chapter, the Director of Code Enforcement or their designee, after consultation with the Township of Haverford Engineer, shall issue the necessary permit.

§ 78-9. Performance standards.

- A. Notwithstanding any provision of this chapter or any condition of the permit, the permittee is responsible for the prevention of damage to other property or personal injury which may be affected by the activity requiring a permit.
- B. No person, firm or corporation shall modify, fill, excavate, pave, grade or regrade land in any manner so close to a property line as to endanger or damage any adjoining street, sidewalk, alley or any other public or private property without supporting and protecting such property from settling, cracking, erosion, sediment or other physical damage or personal injury which might result.
- C. No person, firm or corporation shall deposit or place any debris or any other material whatsoever or to cause such to be thrown or placed in any drainage ditch or drainage structure in such a manner as to obstruct free flow.
- D. No person, firm or corporation shall fail to adequately maintain in good operating order any drainage facility on his premises. All drainage ditches, culverts, drainpipes and drainage structures shall be kept open and free-flowing at all times.
- E. The owner of any property on which any work has been done pursuant to a permit granted under this chapter shall continuously maintain and repair all graded surfaces and antierosion devices, retaining walls, drainage structures or means and other protective devices, plantings and ground cover installed or completed.
- F. All graded surfaces shall be seeded, sodded and/or planted or otherwise protected from erosion within 60 days and shall be watered, tended and/or maintained until growth, in the case of vegetation, is well established. The disturbed area and duration of exposure shall be kept to a practical minimum.
- G. All trees in the area of extreme grade change shall be removed unless protected with suitable tree wells. However, extreme precautions shall be taken to prevent the unnecessary removal of trees.
- H. When required, adequate provisions shall be made for dust control measures as are

deemed acceptable by the Township of Haverford.

- I. A quality control program is critical for fills, therefore, whenever fill material is to be used, each layer of compacted fill should be tested to determine its dry density as per ASTM D 1556. The density of each layer should not be less than 95% of maximum dry density as determined by ASTM D 1557.
 - (1) Inspection procedure shall follow the general procedure as stated in § 78-10.
 - (2) Compaction test reports shall be kept on file at the site and shall be subject to review at all times.
 - (3) The degree of compaction required shall be determined by the Township of Haverford Engineer following the guidelines in Subsection J above.
 - (4) Where the provisions of Subsection J are determined to be inapplicable, they may be waived by the Township of Haverford Engineer.

§ 78-10. Inspections; availability and inspection of as-built plans; issuance of occupancy permit.

- A. The Township Engineer shall, when requested by the Director of Code Enforcement or their designee, make inspections hereinafter required and shall either approve that portion of the work which has been completed or notify the permit holder wherein the same fails to comply with the provisions of this chapter. Where it is found by inspection that the conditions are not as stated or shown in the application, the Township Engineer may refuse to approve further work until approval is obtained for a revised grading plan.
- B. Plans for the grading work shall be approved by the Township Engineer and shall be maintained at the site during the progress of the grading work and until the work has been approved.
- C. The permit holder shall notify the Township Engineer in order to obtain inspections, in accordance with the following schedule, at least 48 hours before the inspection is to be made:
 - (1) Initial inspection. When work on the excavation or fill is about to be commenced.
 - (2) Rough grading. When all rough grading has been completed.
 - (3) Drainage facilities. When drainage facilities are to be installed and before such facilities are backfilled.
 - (4) Special structures. When excavations are complete for retaining and crib walls, and when reinforcing steel is in place and before concrete is poured.
 - (5) Final inspection. When all work, including the installation of all drainage and other structures, has been completed.

- D. If at any of the work the Township Engineer shall determine by inspection that the nature of the grading is not in accordance with the approved permit or is not functioning as designed and/or is likely to endanger property or streets or alleys or create hazardous conditions, the Township Engineer may require, as a condition to allowing the work to be done, that such reasonable safety precautions be taken as the Township Engineer considers advisable to avoid such likelihood of danger. Safety precautions may include but shall not be limited specifying a flatter exposed slope, construction or additional drainage facilities, berms, terracing, compaction or cribbing.
- E. Any and all as-built plans shall be available on the site at all times and be subject to inspection and inquiry.
- F. Satisfactory compliance with this chapter shall be necessary before issuance of an occupancy permit.

§ 78-11. Payment of inspection costs by applicant; deposit of sum to cover costs required.

All applicants shall bear all cost of inspections required hereunder and shall deposit with the Director of Finance such sum as the Director of Code Enforcement shall determine to be necessary to guarantee payment of the cost of such inspections.

§ 78-12. Violations and penalties.

Any person, firm or corporation violating any provision of this article shall, upon summary conviction before any District Justice of the Peace, pay a fine not exceeding \$1,000 and costs of prosecution; and in default of one payment of the fine and costs, the violator may be sentenced to the county jail for a term of not more than 90 days. Each and every day in which any person, firm or corporation shall be in violation of this article shall constitute a separate offense.

Article II Stormwater Management General Provisions

§ 78-13. Short Title.

This Ordinance shall be known and may be cited as the “Township of Haverford Stormwater Management Ordinance.”

§ 78-14. Statement of Findings.

The Board of Commissioners of Haverford Township finds that:

- A. Inadequate management of accelerated runoff of stormwater resulting from development throughout a watershed increases runoff volumes, flows and velocities, contributes to erosion and sedimentation, overtaxes the carrying capacity of streams

and storm sewers, greatly increases the cost of public facilities to carry and control stormwater, undermines flood plain management and flood control efforts in upstream and downstream communities, infiltration, threatens public health and safety, and increases nonpoint source pollution of water resources.

- B. Inadequate planning and management of stormwater runoff resulting from land development throughout a watershed can also harm surface water resources by changing the natural hydrologic patterns, accelerating stream flows (which increase scour and erosion of streambeds and streambanks, thereby elevating sedimentation), destroying aquatic habitat, and elevating aquatic pollutant concentrations and loadings such as sediments, nutrients, heavy metals, and pathogens. Groundwater resources are also impacted through loss of recharge.
- C. A comprehensive program of stormwater management (SWM), including minimization of impacts of development, redevelopment, and activities causing accelerated runoff, is fundamental to the public health, safety, and welfare and the protection of people of the Commonwealth, their resources, and the environment.
- D. Stormwater is an important water resource by providing infiltration for water supplies and supports the base flow of streams, which also protects and maintains surface water quality.
- E. Impacts from stormwater runoff can be minimized by using project designs that maintain the natural hydrologic regime and sustain high water quality, infiltration, stream baseflow, and aquatic ecosystems. The most cost-effective and environmentally advantageous way to manage stormwater runoff is through nonstructural project design that minimizes impervious surfaces and sprawl, avoids sensitive areas (i.e., stream buffers, floodplains, steep slopes), and considers topography and soils to maintain the natural hydrologic regime.
- F. Public education on the control of pollution from stormwater is an essential component in successfully addressing stormwater.
- G. Federal and state regulations require certain municipalities to implement a program of stormwater controls. These municipalities are required to obtain a permit for stormwater discharges from their separate storm sewer systems under the National Pollutant Discharge Elimination System (NPDES) program.
- H. Nonstormwater discharges to municipal separate storm sewer systems can contribute to pollution of waters of the commonwealth by Haverford Township.
- I. The use of green infrastructure and low impact development (LID) are intended to address the root cause of water quality impairment by using systems and practices which use or mimic natural processes to: 1) infiltrate and recharge, 2) evapotranspire, and/or 3) harvest and use precipitation near where it falls to earth. Green infrastructure practices, LID, and Cluster Development (CD) contribute to the restoration or maintenance of pre-development hydrology.

§ 78-15. Purpose.

The purpose of this ordinance is to promote the public health, safety, and general welfare, property, and water quality by implementing drainage and stormwater management practices, criteria, and provisions included herein for land development, construction, and Earth Disturbance Activities, to achieve the following throughout the Township:

- A. Promote alternative project designs and layouts that minimize the impacts on surface and groundwater.
- B. Promote nonstructural best management practices (BMPs).
- C. Minimize increases in runoff stormwater volume.
- D. Minimize impervious surfaces.
- E. Manage accelerated stormwater runoff and erosion and sedimentation problems and stormwater runoff impacts at their source by regulating activities that cause these problems.
- F. Provide review procedures and performance standards for stormwater planning and management.
- G. Utilize and preserve existing natural drainage systems as much as possible.
- H. Manage stormwater impacts close to the runoff source, requiring a minimum of structures and relying on natural processes.
- I. Focus on infiltration of stormwater to maintain base flow, to prevent degradation of surface and groundwater quality, and to otherwise protect water resources.
- J. Protect base flows and quality of streams and watercourses, where possible.
- K. Meet legal water quality requirements under state law, including regulations at 25 Pennsylvania Code Chapter 93 to protect, maintain, reclaim, and restore the existing and designated uses of the Waters of the Commonwealth.
- L. Address the quality and quantity of stormwater discharges from the development site.
- M. Provide standards to meet certain NPDES MS4 permit requirements.
- N. Implement an illicit discharge detection and elimination program that addresses non-stormwater discharges into the Municipality's separate storm sewer system (MS4).
- O. Preserve the flood-carrying capacity of streams.
- P. Protect water quality by removing and/or treating pollutants prior to discharge to ground- and surface waters throughout Haverford Township, and to protect, restore, and maintain the chemical, physical, and biological quality of ground and surface waters.

- Q. Reduce flooding impacts and prevent a significant increase in surface runoff rates and volumes, pre-development to post-development, which could worsen flooding downstream in the watershed, enlarge floodplains, erode stream banks, and create other flood-related health, welfare or property losses; in general, to preserve and restore the natural flood-carrying capacity of streams and their floodplains.
- R. Prevent accelerated scour, erosion and sedimentation of stream channels.
- S. Provide performance standards and design criteria based on watershed-wide stormwater management planning.
- T. Provide proper operation and maintenance of all permanent stormwater management facilities and BMPs that are implemented within the Township.
- U. Implement the requirements of Total Maximum Daily Loads (TMDLs) where applicable to waters within or impacted by the Township.

§ 78-16. Statutory Authority.

The Township is empowered or required to regulate land use activities that affect runoff and surface and groundwater quality and quantity by the authority of:

- A. Act of October 4, 1978, 32 P.S., P.L. 864 (Act 167) § 680.1 et seq., as amended, the "Stormwater Management Act" (hereinafter referred to as "the Act");
- B. Water Resources Management Act of 2002, as amended;
- C. First Class Township Code, 53, Section 55101 et seq;
- D. Act of July 31, 1968, P.L. 805, No. 247, Pennsylvania Municipalities Planning Code, Act 247, as amended.

§ 78-17. Applicability/regulated activities.

All regulated activities and all activities that may affect stormwater runoff, including but not limited to land development, redevelopment, and earth disturbance activity located within the municipality, are subject to regulation by this Ordinance.

- A. This article shall apply to all areas of Haverford Township.
- B. This article shall only apply to permanent structural and nonstructural stormwater management BMPs constructed as part of any of the regulated activities listed in this section.
- C. This article contains only the stormwater management performance standards and design criteria that are necessary or desirable from a watershed-wide perspective. Local stormwater management design criteria (e.g., inlet spacing, inlet type, collection system design and details, outlet structure design, etc.) shall continue to be regulated by the applicable municipal ordinances and applicable state regulations.

D. The following activities are defined as "regulated activities" and shall be regulated by this article unless exempted by § 78-18:

1. Land development.
2. Subdivisions.
3. Alteration of the natural hydrologic regime.
4. Construction or reconstruction of or addition of new impervious surfaces (i.e., driveways, parking lots, roads, etc.).
5. Construction of new buildings or additions to existing buildings.
6. Redevelopment.
7. Diversion piping or encroachments in any natural or man-made channel.
8. Nonstructural and structural stormwater management BMPs or appurtenances thereto.
9. Earth disturbance activities of greater than 5,000 square feet.
10. Earth disturbances within 50 feet of other sensitive environmental features, such as streams, ponds, lakes and wetlands.
11. Any of the above regulated activities which were approved more than five years prior to the effective date of this article and resubmitted for municipal approval.

Table 105.1 summarizes the applicability requirements of the ordinance. "Regulated impervious surface" in Table 105.1 includes new, additional, or replacement impervious surface/cover. Repaving existing surfaces without reconstruction does not constitute "replacement."

§ 78-18. Exemptions.

Exemptions for land use activities. An exemption shall not relieve the Applicant from implementing the requirements of the municipal Ordinance or from implementing such measures as are necessary to protect public health, safety, and property. An exemption shall not relieve the Applicant from complying with the special requirements for watersheds draining to identified high quality (HQ) or exceptional value (EV) waters or any other current or future state or municipal water quality protection requirements. If a drainage problem is documented or known to exist downstream of, or is expected from the proposed activity, then the Municipality may withdraw exemptions listed in Table 105.1 and require the Applicant to comply with all requirements of this Ordinance. Even though the Applicant is exempt, he is not relieved from complying with other municipal ordinances or regulations.

Table 105.1 summarizes the exemptions from certain provisions of this Ordinance. Exemptions are for the items noted in Table 105.1 only, and shall not relieve the Applicant from other applicable sections of this Ordinance.

Any regulated activity that is exempt from some provisions of the Ordinance is exempt only from those provisions. If development is to take place in phases, the developer is responsible for implementing the requirements of the Ordinance as the impervious surface/earth disturbance threshold is met. The date of the municipal Ordinance adoption shall be the starting point from which to consider tracts as “parent tracts” in which future subdivisions and respective impervious area and earth disturbance computations shall be cumulatively considered. Exemption shall not relieve the applicant from implementing such measures as are necessary to protect health, safety, and property. For example:

If a property owner proposed a 150 square foot shed after adoption of the municipal stormwater management ordinance, that property owner be exempted from the water quality and quantity requirements of the ordinance as noted in Table 105.1 of the ordinance. If, at a later date, the property owner proposes to construct a 499 square foot room addition, the applicant would be required to comply with the requirements for the Simplified Method for the full 649 square feet of impervious surface created since adoption of the municipal ordinance. If an additional 700 square foot swimming pool/patio is proposed later, the property owner would be required implement the full stormwater quantity and quality control submission requirements of this ordinance for the total 1,349 square feet of additional impervious surface added to the original property since adoption of the municipal ordinance.

A. Exemptions for land use activities. The following land use activities are exempt from the SWM site plan submission requirements of this article:

(1) Use of land for gardening for home consumption.

(2) Agriculture when operated in accordance with a conservation plan, nutrient management plan, or erosion and sedimentation control plan approved by the County Conservation District, including activities such as growing crops, rotating crops, tilling of soil, and grazing animals. Installation of new or expansion of existing farmsteads, animal housing, waste storage, and production areas having impervious surfaces that result in a net increase in earth disturbance of greater than 5,000 square feet shall be subject to the provisions of this article.

(3) High Tunnel if:

a. The High Tunnel or its flooring does not result in an impervious surface exceeding 25% of all structures located on the Landowner’s total contiguous land area; and

b. The High Tunnel meets one of the following:

i. The High Tunnel is located at least 100 feet from any perennial stream or watercourse, public road, or neighboring property line.

- ii. The High Tunnel is located at least 35 feet from any perennial stream or watercourse, public road or neighboring property line and located on land with a slope not greater than 7%.
- iii. The High Tunnel is supported with a buffer or diversion system that does not directly drain into a stream or other watercourse by managing stormwater runoff in a manner consistent with the requirements of Pennsylvania Act 167.

(4) Forest management operations which are following the Department of Environmental Protection's (DEP) management practices contained in its publication "Soil Erosion and Sedimentation Control Guidelines for Forestry" and are operating under an approved erosion and sedimentation plan and must comply with the stream buffer requirements in § 78-42.

(5) Road replacement, development, or redevelopment that has less than 500 square feet of new, additional, or replaced impervious surface/cover, or in the case of earth disturbance only, less than 5,000 square feet of disturbance, is exempt from this article.

(6) Repaving without reconstruction.

B. Exemptions for land development activities.

(1) The following land development and earth disturbance activities are exempt from the SWM site plan submission requirements of this article.

(a) A maximum of 499 square feet of new, additional, or replacement proposed impervious surface.

(b) Up to a maximum of 5,000 square feet of disturbed earth.

(2) These criteria shall apply to the total development even if the development is to take place in phases. The date of the municipal ordinance adoption shall be the starting point from which to consider tracts as "parent tracts" upon which future subdivisions and respective earth disturbance computations shall be cumulatively considered.

The activities exempted above are still encouraged to implement the stormwater management practices as indicated in Appendix B.

(3) The developer should first determine if the proposed activity will result in the introduction of 500 square feet or more of new, additional, or replacement impervious surface. If not, the developer should next determine if the proposed activity will involve earth disturbance of over 5,000 square feet. If not, then the project is exempt from the SWM site plan requirements. Examples:

(a) A project introducing 500 square feet of impervious surface, but only 4,900 square feet of earth disturbance is regulated by this article.

(b) A project involving 5,100 square feet of earth disturbance, but resulting in 400

square feet of impervious surface is regulated.

(c) A project introducing 400 square feet of impervious surface and involving 4,900 square feet of earth disturbance is exempt from the SWM site plan requirements of this article.

C. Additional exemption criteria:

(1) Exemption responsibilities. An exemption shall not relieve the applicant from implementing such measures as are necessary to protect public health, safety, and property.

(2) HQ and EV streams. An exemption shall not relieve the applicant from meeting the special requirements for watersheds draining to identified high quality (HQ) or exceptional value (EV) waters and source water protection areas (SWPA) and requirements for nonstructural project design sequencing (§ 78-33).

(3) Drainage problems. If a drainage problem is documented or known to exist downstream of or is expected from the proposed activity, then Haverford Township may require the applicant to comply with this article.

(4) Emergency exemption. Emergency maintenance work performed for the protection of public health, safety, and welfare. A written description of the scope and extent of any emergency work performed shall be submitted to the Township of Haverford within two calendar days of the commencement of the activity. If the Township of Haverford finds that the work is not an emergency, then the work shall cease immediately, and the requirements of this article shall be addressed as applicable.

(5) Maintenance exemption. Any maintenance to an existing stormwater management system made in accordance with plans and specifications approved by the Township Engineer or the Township of Haverford.

(6) Even though the developer is exempt, they are not relieved from complying with other regulations.

§78-19. Repealer.

Any other ordinance provision(s) or regulation of the municipality inconsistent with any of the provisions of this Ordinance is hereby repealed to the extent of the inconsistency only.

§ 78-20. Severability.

In the event that a court of competent jurisdiction declares any section or provision of this ordinance invalid, such decision shall not affect the validity of any of the remaining provisions of this Ordinance.

§ 78-21. Compatibility with other ordinances or legal requirements.

- A. Approvals issued and actions taken under this Ordinance do not relieve the applicant of the responsibility to secure required permits or approvals for activities regulated by any other code, law, regulation or ordinance.
- B. To the extent that this article imposes more rigorous or stringent requirements for stormwater management, the specific requirements contained in this article shall be followed.
- C. Nothing in this article shall be construed to affect any of Haverford Township's requirements regarding stormwater matters that do not conflict with the provisions of this article, such as local stormwater management design criteria (e.g., inlet spacing, inlet type, collection system design and details, outlet structure design, etc.). Conflicting provisions in other municipal ordinances or regulations shall be construed to retain the requirements of this article addressing state water quality requirements. The requirements of this Ordinance shall supersede any conflicting requirements in other municipal ordinances or regulations.

§ 78-22. Erroneous Permit.

Any permit or authorization issued or approved based on false, misleading or erroneous information provided by an applicant is void without the necessity of any proceedings for revocation. Any work undertaken or use established pursuant to such permit or other authorization is unlawful. No action may be taken by a board, agency or employee of the Township purporting to validate such a violation.

§ 78-23. Waivers.

- A. If the Township determines that any requirement under this Ordinance cannot be achieved for a particular regulated activity, the Township may, after an evaluation of alternatives, approve measures other than those in this Ordinance, subject to Section § 78-22, Waivers; paragraphs B and C.
- B. Waivers or modifications of the requirements of this Ordinance may be approved by the Township if enforcement will exact undue hardship because of peculiar conditions pertaining to the land in question, provided that the modifications will not be contrary to the public interest and that the purpose of the Ordinance is preserved. Cost or financial burden shall not be considered a hardship. Modification may be considered if an alternative standard or approach will provide equal or better achievement of the purpose of the Ordinance. A request for modifications shall be in writing and accompany the Stormwater Management Site Plan submission. The request shall provide the facts on which the request is based, the provision(s) of the Ordinance involved and the proposed modification.
- C. No waiver or modification of any regulated stormwater activity involving earth disturbance greater than or equal to one acre may be granted by the Township unless that action is approved in advance by the Department of Environmental Protection (DEP) or the Delaware County Conservation District.

§ 78-24. Word Usage.

For the purposes of this article, certain terms and words used herein shall be interpreted as follows:

- A. Words used in the present tense include the future tense; the singular number includes the plural, and the plural number includes the singular; words of masculine gender include feminine gender or nonbinary; and words of feminine gender include masculine gender or nonbinary.
- B. The word "includes" or "including" shall not limit the term to the specific example but is intended to extend its meaning to all other instances of like kind and character.
- C. The word "person" includes an individual, firm, association, organization, partnership, trust, company, corporation, unit of government, or any other similar entity.
- D. The words "shall" and "must" are mandatory; the words "may" and "should" are permissive.
- E. The words "used" or "occupied" include the words "intended, designed, maintained, or arranged to be used, occupied, or maintained."

As used in this article, the following terms shall have the meanings indicated:

ACCELERATED EROSION

The removal of the surface of the land through the combined action of man's activity and the natural processes at a rate greater than would occur because of the natural process alone.

AGRICULTURAL ACTIVITY

Activities associated with agriculture such as agricultural cultivation, agricultural operation, and animal heavy use areas. This includes the work of producing crops including tillage, land clearing, plowing, disking, harrowing, planting, harvesting crops or pasturing and raising of livestock and installation of conservation measures. Construction of new buildings or impervious area is not considered an agricultural activity.

ALTERATION

As applied to land, a change in topography as a result of the moving of soil and rock from one location or position to another; also the changing of surface conditions by causing the surface to be more or less impervious; land disturbance.

APPLICANT

A landowner, developer, or other person who has filed an application to the municipality for approval to engage in any regulated activity at a project site in the municipality.

As-Built Drawings

Engineering or site drawings maintained by the contractor as they construct the project and upon which they document the actual locations of the building components and changes to the original contract documents. These documents, or a copy of same, are turned over to the municipal Engineer at the completion of the project.

Bankfull

The channel at the top-of-bank or point from where water begins to overflow onto a floodplain.

Baseflow

Portion of stream discharge derived from groundwater; the sustained discharge that does not result from direct runoff or from water diversions, reservoir releases, piped discharges, or other human activities.

Best Management Practices

Activities, facilities, designs, measures, or procedures used to manage stormwater impacts from regulated activities, to meet state water quality requirements, to promote infiltration, and to otherwise meet the purposes of this Ordinance. Stormwater BMPs are commonly grouped into one of two broad categories or measures: “structural” or “nonstructural.” In this Ordinance, nonstructural BMPs or measures include certain low impact development practices used to minimize the contact of pollutants with stormwater runoff. These practices aim to limit the total volume of stormwater runoff and manage stormwater at its source by techniques such as protecting natural systems and incorporating existing landscape features. Nonstructural BMPs include, but are not limited to, low impact development practices such as the protection of sensitive and special value features such as wetlands and riparian areas, the preservation of open space while clustering and concentrating development, the reduction of impervious surface, and the disconnection of rooftops from storm sewers. Structural BMPs are those that consist of a physical to capture and treat stormwater runoff. Structural BMPs include, but are not limited to, a wide variety of practices and devices, from large-scale retention ponds and constructed wetlands to small-scale underground treatment systems, infiltration facilities, filter strips, bioretention, wet ponds, permeable paving, grassed swales, riparian buffers, sand filters, detention basins, and manufactured devices. Structural and nonstructural stormwater BMPs are permanent appurtenances to the project site.

Bioretention

A stormwater retention area that utilizes woody and herbaceous plants and soils to remove pollutants before infiltration occurs.

Buffer

See “Riparian Buffer”.

Channel

An open drainage feature through which stormwater flows. Channels include, but shall not be limited to, natural and man-made drainageways, swales, streams, ditches, canals, and pipes flowing partly full.

Channel Erosion

The widening, deepening, or headward cutting of channels and waterways caused by stormwater runoff or bankfull flows.

Cistern

An underground reservoir or tank for storing rainwater.

Conservation District

The Delaware County Conservation District.

Conveyance

A natural or manmade, existing, or proposed Stormwater Management Facility, feature or channel used for the transportation or transmission of stormwater from one place to another. For the purposes of this Ordinance, Conveyance shall include pipes, drainage ditches, channels, and swales (vegetated and other), gutters, stream channels, and like facilities or features.

Culvert

A structure with its appurtenant works which carries water under or through an embankment or fill.

Dam

A man-made barrier, together with its appurtenant works, constructed for the purpose of impounding or storing water or another fluid or semifluid. A dam may include a refuse bank, fill, or structure for highway, railroad, or other purposes which impounds or may impound water or another fluid or semifluid.

Department

The Pennsylvania Department of Environmental Protection. Also referred to as “DEP”, “PA DEP” or “PADEP”.

DESIGNEE

The agent of the Delaware County Planning Department, Delaware County Conservation District, and/or agent of the governing body involved with the administration, review, or

enforcement of any provisions of this article by contract or memorandum of understanding.

Design Professional (Qualified)

A Pennsylvania-registered professional engineer, registered landscape architect, or registered professional land surveyor trained to develop stormwater management plans, or any person licensed by the Pennsylvania Department of State or qualified by law to perform the work required by the ordinance.

Design Storm

The magnitude and temporal distribution of precipitation from a storm event measured in probability of occurrence (e.g., a five-year storm) and duration (e.g., 24 hours), used in the design and evaluation of stormwater management systems. Also see Return Period.

Detention Basin

An impoundment designed to collect and retard stormwater runoff by temporarily storing the runoff and releasing it at a predetermined rate. Detention basins are designed to drain completely soon after a rainfall event and become dry until the next rainfall event.

Detention Volume

The volume of runoff that is captured and released into the waters of the Commonwealth at a controlled rate.

Developer

A person, or company, or organization who seeks to undertake any regulated earth disturbance activities at a project site in Haverford Township.

Development, Land

Any human-induced change to improved or unimproved real estate, whether public or private, including but not limited to land development, construction, installation, or expansion of a building or other structure, land division, street construction, drilling, and site alteration, such as embankments, dredging, grubbing, grading, paving, parking or storage facilities, excavation, filling, stockpiling, or clearing. As used in this article, development encompasses both new development and redevelopment.

Development Site (Site)

See Project Site.

Diameter At Breast Height (Dbh)

The outside bark diameter at breast height which is defined as 4.5 feet (1.37m) above the forest floor on the uphill side of the tree.

Diffused Drainage Discharge

Drainage discharge that is not confined to a single point location or channel, including sheet flow or shallow concentrated flow.

Discharge

- A. (verb) To release water from a project, site, aquifer, drainage basin, or other point of interest;
- B. (noun) The rate and volume of flow of water such as in a stream, generally expressed in cubic feet per second (see "peak discharge").

Discharge Point

The point of discharge for a stormwater facility.

Disturbed Areas

An unstabilized land area where an earth disturbance activity is occurring or has occurred.

Ditch

A man-made waterway constructed for irrigation or stormwater conveyance purposes.

Downslope Property Line

That portion of the property line of the lot, tract, or parcels of land being developed, located such that overland or pipe flow from the project site would be directed towards it by gravity.

Drainage Conveyance Facility

A stormwater management facility designed to transport stormwater runoff that includes channels, swales, pipes, conduits, culverts, and storm sewers.

Drainage Easement

A right granted by a landowner to a grantee allowing the use of private land for stormwater management purposes.

Earth Disturbance Activity

A construction or other human activity which disturbs the surface of the land, including, but not limited to: clearing and grubbing; grading; excavations; embankments; road maintenance; building construction; and the moving, depositing, stockpiling, or storing of soil, rock, or earth materials.

Emergency Spillway

A conveyance area that is used to pass peak discharge greater than the maximum design storm controlled by the stormwater facility.

ENCROACHMENT

A structure or activity that changes, expands or diminishes the course, current, or cross-section of a watercourse, floodway or body of water.

Erosion

The natural process by which the surface of the land is worn away by water, wind or chemical action.

Erosion And Sediment (E&S) Control Plan

A plan that is designed to minimize accelerated erosion and sedimentation. Said plan must be submitted to and approved by the appropriate conservation district before construction can begin.

Evapotranspiration (Et)

The combined processes of evaporation from the water or soil surface and transpiration of water by plants.

Exceptional Value Waters

Surface waters of high quality which satisfy Pennsylvania Code Title 25 Environmental Protection, Chapter 93, Water Quality Standards, § 93.4b(b) (relating to anti-degradation).

Existing Conditions

The dominant land cover during the 5-year period immediately preceding a proposed regulated activity.

FEMA

Federal Emergency Management Agency.

Financial Hardship

A situation where the greatest possible profit cannot be fully realized from development/redevelopment on a given parcel of land due to added costs or burdens associated with the design, construction, and/or maintenance of stormwater structures, facilities, buffers and/or setbacks.

Flood

A temporary condition of partial or complete inundation of land areas from the overflow of streams, rivers, and other waters of this commonwealth.

Floodplain

Any land area susceptible to inundation by water from any natural source or delineated by applicable Department of Housing and Urban Development, Federal Emergency Management Agency (FEMA) maps and studies as being a special flood hazard area.

Floodway

The channel of the watercourse and those portions of the adjoining floodplains that are reasonably required to carry and discharge the 100-year flood (also called the base flood or one percent (1%) annual chance flood). Unless otherwise specified, the boundary of the floodway is as indicated on maps and flood insurance studies provided by FEMA. In an area where no FEMA maps or studies have defined the boundary of the 100-year floodway, it is assumed--absent evidence to the contrary--that the floodway extends from the stream to 50 feet from the top of the bank of the stream.

Fluvial Geomorphology

The study of landforms associated with river channels and the processes that form them.

Forest Management/Timber Operations

Planning and activities necessary for the management of forestland. These include conducting a timber inventory, preparation of forest management plans, silvicultural treatment, cutting budgets, logging road design and construction, timber harvesting, site preparation, and reforestation.

Freeboard

A vertical distance between the elevation of the design high water and the top of a dam, levee, tank, basin, swale, or diversion berm. The space is required as a safety margin in a pond or basin.

Grade

A. (noun) A slope, usually of a road, channel or natural ground specified in percent and shown on plans as specified herein.

B. (verb) To finish the surface of a roadbed, the top of an embankment, or the bottom of an excavation.

Grassed Waterway

A natural or man-made waterway, usually broad and shallow, covered with erosion-resistant grasses used to convey surface water.

Green Infrastructure

Systems and practices that use or mimic natural processes to infiltrate, evapotranspire, or reuse stormwater on the site where it is generated. Also referred to as Green Stormwater Infrastructure (GSI).

Groundwater

Water beneath the earth's surface that supplies wells and springs and is often between saturated soil and rock.

Groundwater Recharge

The replenishment of existing natural underground water supplies from rain or overland flow.

HEC-HMS

The U.S. Army Corps Of Engineers, Hydrologic Engineering Center (HEC) – Hydrologic Modeling System (HMS). This model was used to model the Darby-Cobbs and Crum Creek watersheds during the Act 167 plan development and was the basis for the standards and criteria of this article.

High Quality Waters

Surface waters having quality which exceeds levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water by satisfying Pennsylvania Code Title 25 Environmental Protection, Chapter 93, Water Quality Standards, § 93.4b(a).

High Tunnel

A structure which meets the following:

1. Is used for the production, processing, keeping, storing, sale or shelter of an agricultural commodity as defined in section 2 of the Act of December 19, 1974 (P.L. 973, No. 319), known as the “Pennsylvania Farmland and Forest Land Assessment Act of 1974,” or the storage of agricultural equipment or supplies; and
2. Is constructed with all the following:
 - a. has a metal, wood, or plastic frame;
 - b. when covered, has a plastic, woven textile, or other flexible covering; and
 - c. has a floor made of soil, crushed stone, matting, pavers, or a floating concrete slab.

Hotspots

Areas where land use or activities generate highly contaminated runoff, with concentrations of pollutants in excess of those typically found in stormwater.

Hydrograph

A graph representing the discharge of water versus time for a selected point in the drainage system.

Hydrologic Regime

The hydrologic cycle or balance that sustains quality and quantity of stormwater, baseflow, storage and groundwater supplies under natural conditions.

Hydrologic Soil Group (HGS)

Infiltration rates of soils vary widely and are affected by subsurface permeability as well as surface intake rates. Soils are classified into four HSGs (A, B, C, and D) according to their minimum infiltration rate, which is obtained for bare soil after prolonged wetting. The NRCS defines the four groups and provides a list of most of the soils in the United States and their group classification. The soils in the area of the development site may be identified from a soil survey report that can be obtained from local NRCS offices or conservation district offices. Soils become less pervious as the HSG varies from A to D (NRCS1,2).

Impervious Surface (Impervious Area)

Impervious surfaces shall include, but are not limited to, streets, sidewalks, swimming pool surface, pavements, additional indoor living spaces, patios, garages, storage sheds, and similar structures, driveway areas, or roofs, tennis or other paved courts. For the purposes of determining compliance with this Ordinance, compacted soils or stone surfaces used for vehicle parking and movement shall be considered impervious. Uncompacted gravel areas with no vehicular traffic shall be considered pervious per review by the Township Engineer. Surfaces that were designed to allow infiltration (i.e. pavers and areas of porous pavement) are to be considered impervious surface, however, may be designed to function as a BMP per review by the Township Engineer. Additionally, for the purposes of determining compliance with this Ordinance, the total horizontal projection area of all ground-mounted and free-standing solar collectors, including solar photovoltaic cells, panels, and arrays, shall be considered pervious so long as the Township Engineer determines that the area underneath the solar photovoltaic cells, panels, and arrays is maintained as a vegetated pervious surface.

Impoundment

A retention or detention basin designed to retain stormwater runoff and release it at a controlled rate.

Infill

Development that occurs on smaller parcels that remain undeveloped but are within or in very close proximity to urban or densely developed areas. Infill development usually relies on existing infrastructure and does not require an extension of water, sewer, or other public utilities.

Infiltration

Movement of surface water into the soil, where it is absorbed by plant roots, evaporated into the atmosphere, or percolated downward to recharge groundwater.

Infiltration Structures

A structure designed to direct runoff into the underground water (e.g., French drains, seepage pits, or seepage trenches).

Inflow

The flow entering the stormwater management facility and/or BMP.

Inlet

The upstream end of any structure through which water may flow.

Intermittent Stream

A stream that flows only part of the time. Flow generally occurs for several weeks or months in response to seasonal precipitation or groundwater discharge.

Invert

The lowest surface, the floor or bottom of a culvert, drain, sewer, channel, basin, BMP, or orifice.

Karst

A type of topography or landscape characterized by surface depressions, sinkholes, rock pinnacles/uneven bedrock surface, underground drainage, and caves. Karst is formed on carbonate rocks, such as limestone or dolomite.

Land Development (Development)

Inclusive of any or all of the following meanings:

- i. The improvement of one lot or two or more contiguous lots, tracts, or parcels of land for any purpose involving:
 - a. A group of two or more buildings or
 - b. The division or allocation of land or space between or among two or more existing or prospective occupants by means of, or for the purpose of streets, common areas, leaseholds, condominiums, building groups, or other features;
- ii. Any subdivision of land;
- iii. Development in accordance with Section 503(1.1) of the PA Municipalities Planning Code

Limiting Zone

A soil horizon or condition in the soil profile or underlying strata that includes one of the following:

- A. A seasonal high water table, whether perched or regional, determined by direct observation of the water table or indicated by soil mottling.

- B. A rock with open joints, fracture or solution channels, or masses of loose rock fragments, including gravel, with insufficient fine soil to fill the voids between the fragments.
- C. A rock formation, other stratum, or soil condition that is so slowly permeable that it effectively limits downward passage of water.

Lot

A designated parcel, tract, or area of land established by a plat or otherwise as permitted by law and to be used, developed, or built upon as a unit.

Low Impact Development (LID)

Site design approaches and small-scale stormwater management practices that promote the use of natural systems for infiltration, evapotranspiration, and reuse of rainwater. LID can be applied to new development, urban retrofits, and revitalization projects. LID utilizes design techniques that infiltrate, filter, evaporate, and store runoff close to its source. Rather than rely on costly large-scale conveyance and treatment systems, LID addresses stormwater through a variety of small, cost-effective landscape features located on-site.

Main Stem (Main Channel)

Any stream segment or other runoff conveyance used as a reach in watershed-specific hydrologic models.

Managed Release Concept (MRC)

A post-construction stormwater management (PCSM) strategy that comprises the collection, management, and filtration of captured runoff from the contributing drainage area through a best management practice (BMP) that is preferably vegetated and includes release of a portion of the captured runoff through an underdrain within the BMP. If the MRC BMP is not vegetated, then pretreatment is required to meet water quality requirements. MRC is intended to be used for project areas or subareas where infiltration is considered infeasible to meet regulatory requirements. Refer to the "Managed Release Concept" Version 1.2 (August 25, 2020) guidance document or latest guidance from PA DEP.

Manning Equation (Manning Formula)

A method for calculation of velocity of flow (e.g., feet per second) and flow rate (e.g., cubic feet per second) in open channels based upon channel shape, roughness, depth of flow, and slope. "Open channels" may include closed conduits so long as the flow is not under pressure.

Maximum Design Storm

The maximum (largest) design storm that is controlled by the stormwater facility.

MUNICIPAL ENGINEER Or TOWNSHIP ENGINEER

A professional engineer licensed as such in the Commonwealth of Pennsylvania, duly appointed as the Engineer for a municipality, planning agency, or joint planning commission.

MUNICIPALITY Or TOWNSHIP

Haverford Township, Delaware County, Pennsylvania.

Natural Condition

Predevelopment condition.

Natural Hydrologic Regime

See "Hydrologic Regime."

Natural Recharge Area

Undisturbed surface area or depression where stormwater collects and a portion of which infiltrates and replenishes the underground and groundwater.

Nonpoint Source Pollution

Pollution that enters a water body from diffuse origins in the watershed and does not result from discernible, confined, or discrete conveyances.

Nonstormwater Discharges

Water flowing in stormwater collection facilities, such as pipes or swales, which is not the result of a rainfall event or snowmelt.

Nonstructural Best Management Practices (BMPs)

Methods of controlling stormwater runoff quantity and quality, such as innovative site planning, impervious area and grading reduction, protection of natural depression areas, temporary ponding on site, and other techniques.

NPDES

National Pollutant Discharge Elimination System, the federal government's system for issuance of permits under the Clean Water Act, which is delegated to DEP in Pennsylvania.

NRCS

Natural Resource Conservation Service (previously SCS).

Open Channel

A conveyance channel that is not enclosed.

Outfall

"Point source," as described in 40 CFR § 122.2, at the point where Haverford Township's storm sewer system discharges to surface waters of the commonwealth.

Outflow

The flow exiting the stormwater management facility and/or BMP.

Outlet

Points of water disposal to a stream, river, lake, tidewater, or artificial drain.

Parent Tract

The parcel of land from which a land development or subdivision originates, determined from the date of municipal adoption of this article.

Parking Lot Storage

Involves the use of parking areas as temporary impoundments with controlled release rates during rainstorms.

Peak Discharge

The maximum rate of stormwater runoff from a specific storm event.

Penn State Runoff Model

The computer-based hydrologic model developed at Pennsylvania State University.

Pennsylvania Stormwater Best Management Practices Manual

(Document Number 363-0300-002) (December 2006, and as subsequently amended) - The Best Management Practices Manual published by the Pennsylvania Department of Environmental Protection. The manual is to supplement federal and state regulations and the Department of Environmental Protection's Comprehensive Stormwater Management Policy that emphasizes effective site planning as the preferred method of managing runoff while also providing numerous examples of BMPs that can be employed in Pennsylvania to further avoid and minimize flooding and water resource problems.

Pervious Area

Any area not defined as impervious.

Pipe

A culvert, closed conduit, or similar structure (including appurtenances) that conveys stormwater.

Planning Commission

The Planning Commission of Haverford Township.

Point Source

Any discernible, confined, and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel or conduit from which stormwater is or may be discharged, as defined in state regulations at 25 Pennsylvania Code § 92.1.

Postconstruction

Period after construction during which disturbed areas are stabilized, stormwater controls are in place and functioning, and all proposed improvements in the approved land development plan are completed.

Preconstruction

Prior to commencing construction activities.

Predevelopment Condition

Undeveloped/natural condition.

Pretreatment

Techniques employed in stormwater BMPs to provide storage or filtering to trap coarse materials and other pollutants before they enter the system, but not necessarily designed to meet the water quality volume requirements of § 78-37.

Project Site

The specific area of land where any regulated activities in Haverford Township are planned, conducted or maintained.

Qualified Professional

Any person licensed by the Pennsylvania Department of State or otherwise qualified by law to perform the work required by this Ordinance.

Rational Formula

A rainfall-runoff relation used to estimate peak flow.

Reach

Any stream segment or other runoff conveyance used in the watershed-specific hydrologic models.

Recharge

The replenishment of groundwater through the infiltration of rainfall, other surface waters, or land application of water or treated wastewater.

Reconstruction

Demolition and subsequent rebuilding of impervious surface.

Record Drawings

Original documents revised to suit the as-built conditions and subsequently provided by the engineer to the client. The engineer reviews the contractor's as-builts against their own records for completeness, then either turns these over to the client or transfers the information to a set of reproducible, in both cases for the client's permanent records.

Redevelopment

Any development that requires demolition or removal of existing structures or impervious surfaces at a site and replacement with new impervious surfaces. Maintenance activities such as top-layer grinding and repaving are not considered to be redevelopment. Interior remodeling projects and tenant improvements are also not considered to be redevelopment.

Regulated Activities

Any earth disturbance activities or any activities that involve the alteration or development of land in a manner that may affect stormwater runoff. Actions or proposed actions that have an impact on stormwater runoff quality or quantity and that are specified in § 78-17 of this article.

Regulated Earth Disturbance Activity

Activity involving earth disturbance subject to regulation under 25 Pa. Code 92, 25 Pa. Code 102, or the Clean Streams Law. Defined under NPDES Phase II regulations as earth disturbance activity of one acre or more with a point source discharge to surface waters or Haverford Township's storm sewer system or five acres or more regardless of the planned runoff. This includes earth disturbance on any portion of, part, or during any stage of a larger common plan of development.

Regulated Impervious Surface

Proposed impervious surface as part of a current proposed activity and all existing impervious surfaces installed after February 15, 2005 as part of a previous activity.

Release Rate

The percentage of existing conditions' peak rate of runoff from a site or subarea to which the proposed conditions' peak rate of runoff must be reduced to protect downstream areas.

Repaving

Replacement of the impervious surface that does not involve reconstruction of an existing paved (impervious) surface.

Replacement Paving

Reconstruction of and full replacement of an existing paved (impervious) surface.

Retention Basin

A structure in which stormwater is stored and not released during the storm event. Retention basins are designed for infiltration purposes and do not have an outlet. The retention basin must infiltrate stored water in four days or less.

Retention Volume/Removed Runoff

The volume of runoff that is captured and not released directly into the surface waters of this Commonwealth during or after a storm event.

Return Period

The average interval, in years, within which a storm event of a given magnitude can be expected to occur one time. For example, the 25-year return period rainfall would be expected to occur on average once every 25 years; or stated in another way, the probability of a 25-year storm occurring in any one year is 0.04 (i.e., a 4% chance).

Riparian

Pertaining to anything connected with or immediately adjacent to the banks of a stream or other body of water.

Riparian Buffer

An area of land adjacent to a body of water and managed to maintain the integrity of stream channels and shorelines to 1) reduce the impact of upland sources of pollution by trapping, filtering, and converting sediments, nutrients, and other chemicals, and 2) supply food, cover and thermal protection to fish and other wildlife.

Riser

A vertical pipe extending from the bottom of a pond that is used to control the discharge rate from the pond for a specified design storm.

Road Maintenance

Earth disturbance activities within the existing road cross section, such as grading and repairing existing unpaved road surfaces, cutting road banks, cleaning or clearing drainage ditches, and other similar activities.

Roof Drains

A drainage conduit or pipe that collects water runoff from a roof and leads it away from the structure.

Rooftop Detention

The temporary ponding and gradual release of stormwater falling directly onto flat roof surfaces using controlled-flow roof drains in building designs.

Runoff

Any part of precipitation that flows over the land surface.

Saldo

Subdivision and Land Development Ordinance.

Sediment

Soils or other materials transported by surface water as a product of erosion.

Sediment Basin

A barrier, dam, or retention or detention basin located and designed in such a way as to retain rock, sand, gravel, silt, or other material transported by water during construction.

Sediment Pollution

The placement, discharge, or any other introduction of sediment into the waters of the commonwealth.

Sedimentation

The process by which mineral or organic matter is accumulated or deposited by the movement of water or air.

Seepage Pit/Seepage Trench

An area of excavated earth filled with loose stone or similar coarse material into which surface water is directed for infiltration into the underground water.

Separate Storm Sewer System

A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains) primarily used for collecting and conveying stormwater runoff.

Shallow Concentrated Flow

Stormwater runoff flowing in shallow, defined ruts prior to entering a defined channel or waterway.

Sheet Flow

A flow process associated with broad, shallow water movement on sloping ground surfaces that is not channelized or concentrated.

Soil Cover Complex Method

A method of runoff computation developed by NRCS that is based on relating soil type and land use/cover to a runoff parameter called curve number (CN).

Source Water Protection Areas (SWPA)

The zone through which contaminants, if present, are likely to migrate and reach a drinking water well or surface water intake.

Special Protection Subwatersheds

Watersheds that have been designated by DEP as EV or HQ waters.

Spillway

A conveyance that is used to pass the peak discharge of the maximum design storm that is controlled by the stormwater facility.

State Water Quality Requirements

The regulatory requirements to protect, maintain, reclaim, and restore water quality under Title 25 of the Pennsylvania Code and the Clean Streams Law.

Storage Indication Method

A reservoir routing procedure based on solution of the continuity equation (inflow minus outflow equals the change in storage) with outflow defined as a function of storage volume and depth.

Storm Frequency

The number of times that a given storm "event" occurs or is exceeded on the average in a stated period of years (see "return period").

Storm Sewer

A system of pipes and/or open channels that conveys intercepted runoff and stormwater from other sources but excludes domestic sewage and industrial wastes.

Stormwater

Drainage runoff from the surface of the land resulting from precipitation or snow or ice melt.

Stormwater Control Measure

Physical features used to effectively control, minimize, and treat stormwater runoff. Also may be referred to as Stormwater Management Practice (SMP). [See Best Management Practice (BMP)].

Stormwater Management District

Those subareas of a watershed in which some type of detention is required to meet the plan requirements and the goals of Act 167.

Stormwater Management Facility

Any structure, natural or man-made, that, due to its condition, design, or construction, conveys, stores, or otherwise affects stormwater runoff quality, rate, or quantity, including Best Management Practices and Stormwater Control Measures. Typical stormwater management facilities include, but are not limited to: detention and retention basins, open channels, storm sewers, pipes, and infiltration facilities.

Stormwater Management Permit (SWM PERMIT)

A permit issued by Haverford Township after the SWM Site plan has been approved.

Stormwater Management Plan

The watershed plan, known as the "Darby and Cobbs Creeks Watershed Act 167 Stormwater Management Plan," for managing those land use activities that will influence stormwater runoff quality and quantity and that would impact the Darby and Cobbs Creeks watershed adopted by Delaware County, Chester County, Montgomery County and Philadelphia County as required by the Act of October 4, 1978, P.L. 864 (Act 167).

Stormwater Management Site Plan (SWM SITE PLAN)

The plan prepared by the developer or his representative indicating how stormwater runoff will be managed at the development site in accordance with this Ordinance. Stormwater Management Site Plan will be designated as SWM Site Plan throughout this Ordinance.

Stream

A natural watercourse.

Stream Buffer

The land area adjacent to each side of a stream essential to maintaining water quality (see "buffer").

Stream Enclosure

A bridge, culvert, or other structure in excess of 100 feet in length upstream to downstream which encloses a regulated water of the commonwealth.

Subarea (Subwatershed)

The smallest drainage unit of a watershed for which stormwater management criteria have been established in the stormwater management plan.

Subdivision

As defined in The Pennsylvania Municipalities Planning Code, Act of July 31, 1968, P.L. 805, No. 247; The division or redivision of a lot, tract, or parcel of land by any means into two or more lots, tracts, parcels, or other divisions of land including changes in existing lot lines for the purpose, whether immediate or future, of lease, partition by the court for distribution to heirs or devisees, transfer of ownership, or building or lot development; provided, however, that the subdivision by lease of land for agricultural purposes into

parcels of more than 10 acres not involving any new street or easement of access or any residential dwelling shall be exempted.

Surface Waters Of The Commonwealth

Any and all rivers, streams, creeks, rivulets, ditches, watercourses, storm sewers, lakes, dammed water, wetlands, ponds, springs, and all other bodies or channels of conveyance of surface waters, or parts thereof, whether natural or artificial, within or on the boundaries of the commonwealth.

Swale

A low-lying stretch of land that gathers or carries surface water runoff.

Timber Operations

See "Forest Management."

Time-Of-Concentration (Tc)

The time required for surface runoff to travel from the hydraulically most distant point of the watershed to a point of interest within the watershed. This time is the combined total of overland flow time and flow time in pipes or channels, if any.

Top-Of-Bank

Highest point of elevation in a stream channel cross section at which a rising water level just begins to flow out of the channel and over the floodplain.

Undeveloped Condition

Natural condition (see also "Predevelopment Condition").

USDA

United States Department of Agriculture

Vernal Pond

Seasonal depressional wetlands that are covered by shallow water for variable periods from winter to spring but may be completely dry for most of the summer and fall.

Watercourse

A channel or conveyance of surface water having a defined bed and banks, whether natural or artificial, with perennial or intermittent flow.

Waters Of This Commonwealth

Any and all rivers, streams, creeks, rivulets, impoundments, ditches, watercourses, storm sewers, lakes, dammed water, wetlands, ponds, springs, and all other bodies or channels of conveyance of surface and underground water, or parts thereof, whether natural or

artificial, within or on the boundaries of this Commonwealth.

Watershed

Region or area drained by a river, watercourse, or other surface water of this Commonwealth.

Wellhead

- A. A structure built over a well;
- B. The source of water for a well.

Wellhead Protection Area

The surface and subsurface area surrounding a water supply well, well field, or spring supplying a public water system through which contaminants are reasonably likely to move toward and reach the water source.

Wet Basin

Pond for urban runoff management that is designed to detain urban runoff and always contains water.

Wetland

Areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions, including swamps, marshes, bogs, and similar areas.

Woods

A natural ground cover with more than one viable tree of a DBH of six inches or greater per 1,500 square feet which existed within three years of application; a cover condition for which SCS curve numbers have been assigned or to which equivalent rational method runoff coefficients have been assigned.

§ 78-25. General Requirements.

For any of the activities regulated by this article, the preliminary or final approval of subdivision and/or land development plans, the issuance of any building or occupancy permit, or the commencement of any earth disturbance activity may not proceed until the property owner or applicant or their agent has received written approval of a SWM site plan from Haverford Township and an adequate erosion and sediment control plan review by the Conservation District.

§ 78-26. SWM site plan contents.

The SWM site plan shall consist of a general description of the project including sequencing items described in § 78-35 [Nonstructural project design (sequencing to minimize stormwater impacts)], calculations, maps, and plans. A note on the maps shall refer to the associated computations and erosion and sediment control plan by title and date. The cover sheet of the computations and erosion and sediment control plan shall refer to the associated maps by title and date. All SWM site plan materials shall be submitted to Haverford Township in a format that is clear, concise, legible, neat, and well organized; otherwise, the SWM Site plan shall not be accepted for review and shall be returned to the applicant. The following items shall be included in the SWM site plan:

A. General.

1. General description of the project including those areas described in § 78-35 [Nonstructural project design (sequencing to minimize stormwater impacts)].
2. General description of proposed permanent stormwater management techniques, including construction specifications of the materials to be used for stormwater management facilities.
3. Complete hydrologic, hydraulic, and structural computations for all stormwater management facilities.
4. An erosion and sediment control plan, including all reviews and letters of adequacy from the Conservation District.
5. A general description of proposed nonpoint source pollution controls.
6. A justification must be included in the SWM Site Plan if BMPs other than green infrastructure methods and LID practices are proposed to achieve the volume, rate, and water quality controls under this Ordinance.
7. The SWM Site Plan Application and completed fee schedule form and associated fee (Appendix C-1).
8. The SWM Site Plan Checklist (Appendix C-2).

B. Maps or Plan Sheets. Map(s) or plan sheets of the project area shall be submitted on twenty-four-inch by thirty-six-inch sheets and/or shall be prepared in a form that meets the requirements for recording at the offices of the Recorder of Deeds of Delaware County. If the SALDO has more stringent criteria than this article, then the more stringent criteria shall apply. The contents of the map(s) shall include, but not be limited to:

1. The location of the project relative to highways, municipal boundaries, or other identifiable landmarks.
2. Existing contours at intervals of two feet.
3. Existing streams, lakes, ponds, or other waters of the commonwealth within the

project area.

4. Other physical features including flood hazard boundaries, stream buffers, existing drainage courses, areas of natural vegetation to be preserved, and the total extent of the upstream area draining through the site.
5. The locations of all existing and proposed utilities, sanitary sewers, and water lines within 50 feet of property lines.
6. An overlay showing soil names and boundaries.
7. Limits of earth disturbance, including the type and amount of impervious area that would be added.
8. Proposed structures, roads, paved areas, and buildings.
9. Final contours at intervals of two feet.
10. The name of the development, the name and address of the owner of the property, and the name of the individual or firm preparing the plan.
11. The date of submission.
12. A graphic and written scale of one-inch equals no more than 50 feet; for tracts of 20 acres or more, the scale shall be one inch equals no more than 100 feet.
13. A north arrow.
14. The total tract boundary and size with distances marked to the nearest foot and bearings to the nearest degree.
15. Existing and proposed land use(s).
16. A key map showing all existing man-made features beyond the property boundary that would be affected by the project.
17. Location of all open channels.
18. Overland drainage patterns and swales.
19. A fifteen-foot-wide access easement around all stormwater management facilities that would provide ingress to and egress from a public right-of-way.
20. The location of all erosion and sediment control facilities.
21. A note on the plan indicating the location and responsibility for maintenance of stormwater management facilities that would be located off site. All off-site facilities shall meet the performance standards and design criteria specified in this article
22. A statement, signed by the applicant, acknowledging that any revision to the approved SWM site plan must be approved by Haverford Township, and that a

revised erosion and sediment control plan must be submitted to the Conservation District for a determination of adequacy.

23. The following signature block signed and sealed by the qualified Licensed Professional responsible for the preparation of the SWM site plan:

"I, (Licensed Professional), on this date (date of signature), hereby certify that the SWM site plan meets all design standards and criteria of the Haverford Township Stormwater Management Code."

24. The following signature block for the Municipality:

"On behalf of Haverford Township, (Municipal Official or Designee), on this date (date of signature), has reviewed and hereby certifies to the best of my knowledge that the SWM Site Plan meets all design standards and criteria of the Haverford Township Stormwater Management Ordinance."

C. Supplemental information to be submitted to Haverford Township.

1. A written description of the following information shall be submitted by the applicant and shall include:
 - a. The overall stormwater management concept for the project designed in accordance with § 78-35, Nonstructural project design (sequencing to minimize stormwater impacts).
 - b. Stormwater runoff computations as specified in this article.
 - c. Stormwater management techniques to be applied both during and after development.
 - d. Expected project time schedule.
 - e. Development stages or project phases, if so proposed.
 - f. An operations and maintenance plan in accordance with § 78-48, Responsibilities for operations and maintenance of stormwater controls and BMPs of this article.
2. An erosion and sediment control plan.
3. A description of the effect of the project (in terms of runoff volumes and peak flows) on adjacent properties and on any existing municipal stormwater collection system that may receive runoff from the project site.
4. A declaration of adequacy and highway occupancy permit from the Pennsylvania Department of Transportation (PennDOT) District office when utilization of a PennDOT storm drainage system is proposed.

D. Stormwater management facilities.

1. All stormwater management facilities must be located on a plan and described in detail.
2. The locations of existing and proposed septic tank infiltration areas and wells must be shown.
3. All calculations, assumptions, and criteria used in the design of the stormwater management facilities must be shown.

§ 78-27. SWM Site Plan submission.

Haverford Township shall require receipt of a complete SWM site plan, as specified in this article.

- A. Proof of application or documentation of required permit(s) or approvals for the programs listed below shall be part of the plan:
 1. NPDES permit for stormwater discharges from construction activities.
 2. DEP joint permit application.
 3. PennDOT highway occupancy permit.
 4. Chapter 105 (Dam Safety and Waterway Management).
 5. Chapter 106 (Floodplain Management).
 6. Any other permit under applicable state or federal regulations.
- B. The plan shall be coordinated with the state and federal permit process and the municipal SALDO review process. The process implementing the provisions in this article is illustrated in Appendixes D-1 and D-2.
- C. For projects that require SALDO approval, the SWM site plan shall be submitted by the applicant as part of the preliminary plan submission where applicable for the regulated activity.
- D. For regulated activities that do not require SALDO approval, see § 78-26, SWM site plan requirements.
- E. Six (6) copies of the SWM site plan shall be submitted and distributed as follows:
 1. Two copies to Haverford Township accompanied by the requisite municipal review fee, as specified in this article.
 2. Two copies to the County Conservation District.
 3. One copy to the municipal Engineer.
 4. One copy to the County Planning Commission/Department.
- F. Any submissions to the agencies listed above that are found to be incomplete shall

not be accepted for review and shall be returned to the applicant with a notification in writing of the specific manner in which the submission is incomplete.

§ 78-28. Stormwater Management (SWM) Site Plan Review.

- A. The municipal Engineer shall review the SWM site plan for consistency with this article and the respective Act 167 stormwater management plan. Any plan found incomplete shall not be accepted for review and shall be returned to the applicant.
- B. The municipal Engineer shall review the SWM site plan for any subdivision or land development against the municipal SALDO provisions not otherwise superseded by this article.
- C. The Conservation District, in accordance with established criteria and procedures, shall review the SWM site plan for consistency with stormwater management and erosion and sediment pollution control requirements and provide comments to Haverford Township. The applicant shall respond to the Conservation District comments on the SWM site plan prior to being considered for final approval by the Township.
- D. For activities regulated by this article, the municipal Engineer shall notify the applicant and Haverford Township in writing whether the SWM site plan is consistent with the stormwater management plan ordinance.
 - (1) If the municipal Engineer determines that the SWM site plan is consistent with the stormwater management ordinance, the Municipal Engineer shall forward a letter of consistency to the Township who will then forward a copy to the applicant.
 - (2) If the Municipal Engineer determines that the SWM site plan is inconsistent or noncompliant with the stormwater management ordinance, the municipal Engineer shall forward a letter to the Township with a copy to the applicant citing the reason(s) and specific Code sections for the inconsistency or noncompliance. Inconsistency or noncompliance may be due to inadequate information to make a reasonable judgment as to compliance with the stormwater management plan. Any SWM site plans that are inconsistent or noncompliant may be revised by the applicant and resubmitted when consistent with this article.
- E. For regulated activities specified in § 78-17, Applicability and Regulated Activities of this article that require a building permit, the Municipal Engineer shall notify the Municipal Building Permit Officer in writing whether the SWM site plan is consistent with the stormwater management ordinance. The Municipal Building Permit Officer shall forward a copy of the consistency/inconsistency letter to the applicant. Any SWM site plan deemed inconsistent may be revised by the applicant and resubmitted consistent with this article.
- F. For regulated activities under this article that require an NPDES permit application, the applicant shall forward a copy of the Township Engineer's letter stating that the SWM site plan is consistent with the stormwater management ordinance to the

Conservation District. DEP and the Conservation District may consider the Township Engineer's review comments in determining whether to issue a permit.

- G. Haverford Township shall not grant preliminary or final approval to any subdivision or land development for regulated activities specified in § 78-17, Applicability and Regulated Activities, of this article if the SWM site plan has been found by the Township Engineer to be inconsistent with the stormwater management ordinance. All required permits from DEP must be obtained prior to approval of any subdivision or land development.
- H. No building permits for any regulated activity specified in § 78-17, Applicability and Regulated Activities of this article shall be approved by Haverford Township if the SWM site plan has been found to be inconsistent with the stormwater management plan, as determined by the Township Engineer and Conservation District, or without considering the comments of the Township Engineer and Conservation District. All required permits from DEP must be obtained prior to issuance of a building permit.
- I. The Applicant shall be responsible for completing record drawings of all stormwater management facilities included in the approved SWM site plan. The record drawings and an explanation of any discrepancies with the design plans shall be submitted to the Township Engineer for final approval. In no case shall Haverford Township approve the record drawings until Haverford Township receives a copy of an approved declaration of adequacy and/or highway occupancy permit from the PennDOT District office, NPDES permit, and any other applicable permits or approvals from DEP or the Conservation District. The above permits and approvals must be based on the record drawings.
- J. Haverford Township's approval of a SWM site plan shall be valid for a period not to exceed five years commencing on the date that Haverford Township signs the approved SWM site plan. If stormwater management facilities included in the approved SWM site plan have not been constructed, or if constructed, record drawings of these facilities have not been approved within this five-year time period, then Haverford Township may consider the SWM site plan inconsistent or noncompliant and may revoke any and all permits. SWM site plans that are determined to be inconsistent or noncompliant by Haverford Township shall be resubmitted in accordance with § 78-30, Resubmission of Inconsistent or Noncompliant SWM Site Plans, of this article.

§ 78-29. Revision of SWM Site Plans.

- A. A revision to a submitted SWM site plan under review by Haverford Township for a development site that involves the following shall require a resubmission to Haverford Township of a revised SWM site plan consistent with § 78-26 of this article and be subject to review as specified in § 78-28 of this article:
 - (1) Change in stormwater management facilities or techniques;

(2) Relocation or redesign of stormwater management facilities; or

(3) Is necessary because soil or other conditions are not as stated on the SWM site plan as determined by the Municipal Engineer.

- B. A revision to an already approved or inconsistent or noncompliant SWM site plan shall be submitted to Haverford Township, accompanied by the applicable municipal review and inspection fee. A revision to a SWM site plan for which a formal action has not been taken by Haverford Township shall be submitted to Haverford Township accompanied by the applicable municipal review and inspection fee.

§ 78-30. Resubmission of inconsistent or noncompliant SWM site plans.

An inconsistent or noncompliant SWM site plan may be resubmitted with the revisions addressing the Township Engineer's concerns documented in writing. It must be addressed to Haverford Township in accordance with § 78-27 contents of this article, distributed accordingly, and be subject to review as specified in § 78-28 of this article. The applicable Township review and inspection fee must accompany a resubmission of an inconsistent or noncompliant SWM site plan.

§78-31. General Requirements for stormwater management.

- A. Applicants proposing regulated activities in Haverford Township which do not fall under the exemption criteria shown in §78-18 shall submit a stormwater management site plan consistent with this ordinance and the applicable watershed stormwater management plan to Haverford Township for review. The stormwater management criteria of this Ordinance shall apply to the total proposed development even if development is to take place in stages.
- B. The applicant is required to design the site to minimize surface discharge of stormwater and the creation of impervious surfaces in order to maintain, as much as possible, the natural hydrologic regime.
- C. The SWM site plan must be designed consistent with the sequencing provisions of §78-35 to ensure maintenance of the natural hydrologic regime, to promote infiltration, and to protect groundwater and surface water quality and quantity. The SWM site plan designer must proceed sequentially in accordance with this Ordinance.
- D. Stormwater drainage systems shall be designed in order to preserve natural flow conditions to the maximum extent practicable.
- E. Alteration of existing drainage discharge onto adjacent property shall only be proposed in accordance with PADEP guidance document "Chapter 102 Off-Site Discharges of Stormwater to Non-Surface Waters – Frequently Asked Questions (FAQ)" dated January 2, 2019, or latest guidance document from PADEP. Such discharge shall be subject to any applicable discharge criteria specified in this Ordinance and still must meet the requirements of Act 167.

- F. Areas of existing diffused drainage discharge, whether proposed to be concentrated or maintained as diffused drainage areas, shall be subject to any applicable discharge criteria in the general direction of existing discharge, except as otherwise provided by this Ordinance. If diffused drainage discharge is proposed to be concentrated and discharged onto adjacent property, the Applicant must document that adequate downstream conveyance facilities exist to safely transport the concentrated discharge or otherwise prove that no erosion, sedimentation, flooding, or other impacts will result from the concentrated discharge.
- G. Where a development site is traversed by a stream, drainage easements shall be provided on either side of, and conform to the line of such streams. The terms of the easement shall conform to the stream buffer requirements contained in §78-42.
- H. Any stormwater management facilities regulated by this article that would be located in or adjacent to waters of the commonwealth or delineated wetlands shall be subject to approval by DEP through the joint permit application or the environmental assessment approval process or, where deemed appropriate, by the DEP general permit process. When there is a question as to whether wetlands may be involved, it is the responsibility of the applicant or his agent to show that the land in question cannot be classified as wetlands; otherwise, approval to work in the area must be obtained from DEP
- I. Any proposed stormwater management facilities regulated by this article that would be located on state highway rights-of-way shall be subject to approval by PennDOT.
- J. Minimization of impervious surfaces and infiltration of runoff through seepage beds, infiltration trenches, etc., is encouraged where soil conditions permit in order to reduce the size or eliminate the need for detention facilities or other structural BMPs.
- K. Rooftop runoff may go directly to an infiltration BMP or be evapotranspired.
- L. All regulated activities within the Municipality shall be designed, implemented, operated, and maintained to meet the purposes of this Ordinance, through these two elements:
 1. Erosion and sediment control during earth disturbance activities (e.g., during construction), and
 2. Water quality protection measures after completion of earth disturbance activities (i.e., after construction), including operations and maintenance.
- M. No regulated activity within the Municipality shall commence until the Municipality issues approval of a SWM plan, which demonstrates compliance with the requirements of this ordinance.
- N. The BMPs shall be designed, implemented, and maintained to meet state water quality requirements and any other more stringent requirements as determined by the Township. Applicants shall utilize the Pennsylvania Stormwater Best Management

Practices Manual (PA BMP Manual), as amended, or other sources acceptable to the Township Engineer, for testing and design standards for BMPs, and where there is a conflict with the provisions of this Ordinance, the most restrictive applies.

- O. Post-construction water quality protection shall be addressed as required by §78-37.
- P. Operations and maintenance of permanent stormwater BMPs shall be addressed as required by this article.
- Q. All BMPs used to meet the requirements of this Ordinance shall conform to the state water quality requirements and any more stringent requirements as set forth by Haverford Township.
- R. Techniques described in Appendix E (Low Impact Development) of this Ordinance and green infrastructure methods shall be prioritized because they reduce the costs of complying with the requirements of this Ordinance and the state water quality requirements.
- S. In selecting the appropriate BMPs or combinations thereof, the Applicant shall consider the following:
 - 1. Total contributing drainage area.
 - 2. Permeability and infiltration rate of the site's soils.
 - 3. Slope and depth to bedrock.
 - 4. Seasonal high water table.
 - 5. Proximity to building foundations and wellheads.
 - 6. Erodibility of soils.
 - 7. Land availability and configuration of the topography.
 - 8. Peak discharge and required volume control.
 - 9. Stream bank erosion.
 - 10. Efficiency of the BMPs to mitigate potential water quality problems.
 - 11. The volume of runoff that will be effectively treated.
 - 12. The nature of the pollutant being removed.
 - 13. Maintenance requirements.
 - 14. Creation/protection of aquatic and wildlife habitat.
 - 15. Recreational value.
 - 16. Enhancement of aesthetic and property values.

- T. The design of all stormwater management facilities shall incorporate sound engineering principles and practices in a manner that does not aggravate existing stormwater problems. The Township reserves the right to disapprove any design that would result in construction in or continuation of a stormwater problem area.
- U. The applicant may meet the stormwater management criteria through off-site stormwater management measures as long as the proposed measures are in the same subwatershed as shown in Ordinance Appendix A.
- V. The following standards for protection of adjacent and downgradient properties from off-site conveyance must be accomplished:

For any location where a new concentrated discharge of stormwater from any frequency rainfall event, up to and including the 100-year storm and the volume of runoff up to and including the 2-year storm onto or through adjacent property(ies) or downgradient property(ies), the following are required:

1. A drainage easement (or other legal agreement/approval) must be obtained for conveyance of discharges onto or through adjacent properties per the PADEP guidance document “Chapter 102 Off-Site Discharges of Stormwater to Non-Surface Wasters – Frequently Asked Questions (FAQ)” dated January 2, 2019, or latest guidance document from PADEP.
2. The conveyance must be designed to avoid erosion, flooding, or other damage to the properties through which it is being conveyed.

§ 78-32. Authorization to Construct and Term of Validity.

Haverford Township’s approval of an SWM Site Plan authorizes the regulated activities contained in the SWM Site Plan for a maximum term of validity of 5 years following the date of approval. The Township may specify a term of validity shorter than 5 years in the approval for any specific SWM Site Plan. Terms of validity shall commence on the date the Municipality signs the approval for an SWM Site Plan. If an approved SWM Site Plan is not completed according to Section § 78-33, Permit requirements by other governmental entities; As-Built Plans, Completion Certificate, and Final inspection, within the term of validity, then the Municipality may consider the SWM Site Plan disapproved and may revoke any and all permits. SWM Site Plans that are considered disapproved by the shall be resubmitted in accordance with Section § 78-30 of this Ordinance.

§ 78-33. Permit requirements by other governmental entities.

The following permit requirements may apply to certain regulated earth disturbance activities and must be met prior to commencement of regulated earth disturbance activities, as applicable:

- A. All regulated earth disturbance activities subject to permit requirements by DEP under regulations at 25 Pennsylvania Code Chapter 102.

- B. Work within natural drainageways subject to permit by DEP under 25 Pennsylvania Code Chapter 105.
- C. Any stormwater management facility that would be located in or adjacent to surface waters of the commonwealth, including wetlands, subject to permit by DEP under 25 Pennsylvania Code Chapter 105.
- D. Any stormwater management facility that would be located on a state highway right-of-way or require access from a state highway shall be subject to approval by PennDOT.
- E. Culverts, bridges, storm sewers, or any other facilities which must pass or convey flows from the tributary area and any facility which may constitute a dam, subject to permit by DEP under 25 Pennsylvania Code Chapter 105.

§ 78-34. Erosion and sediment control during regulated earth disturbance activities.

- A. No regulated earth disturbance activities within Haverford Township shall commence until Haverford Township receives an approval from the Conservation District of an erosion and sediment control plan for construction activities.
- B. DEP has regulations that require an erosion and sediment control plan for any earth disturbance activity of 5,000 square feet or more, under 25 Pennsylvania Code § 102.4(b).
- C. In addition, under 25 Pennsylvania Code Chapter 92, a DEP "NPDES construction activities" permit is required for regulated earth disturbance activities. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate DEP regional office or County Conservation District must be provided to Haverford Township.
- D. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate PA DEP regional office or County Conservation District must be provided to the Township. The issuance of an NPDES construction permit (or permit coverage under the statewide General Permit (PAG-2)) satisfies the requirements of §78-33.
- E. A copy of the erosion and sediment control plan and any required permit, as required by DEP regulations, shall be available on the project site at all times.
- F. Additional erosion and sediment control design standards and criteria are recommended to be applied where infiltration BMPs are proposed. They shall include the following:
 - (1) Areas proposed for infiltration BMPs shall be protected from sedimentation and compaction during the construction phase to maintain maximum infiltration capacity.

- (2) Infiltration BMPs shall not be constructed nor receive runoff until the entire drainage area contributory to the infiltration BMP has achieved final stabilization.

§ 78-35. Nonstructural project design (sequencing to minimize stormwater impacts).

A. The design of all regulated activities shall include the following to minimize stormwater impacts.

- (1) The applicant shall find practicable alternatives to the surface discharge of stormwater, such as those listed in Appendix F, Table F-5, the creation of impervious surfaces, and the degradation of waters of the commonwealth and must maintain as much as possible the natural hydrologic regime of the site.
- (2) The applicant shall apply Low Impact Development (LID) methods such as those listed in Appendix E, provided that use of this method does not conflict with other local codes.
- (3) An alternative is practicable if it is available and capable of implementation after taking into consideration existing technology and logistics in light of overall project purposes and other municipal requirements.
- (4) All practicable alternatives to the discharge of stormwater are presumed to have less adverse impact on quantity and quality of waters of the commonwealth unless otherwise demonstrated.

B. The applicant shall demonstrate that the regulated activities were designed in the following sequence. The goal of the sequence is to minimize the increases in stormwater runoff and impacts to water quality resulting from the proposed regulated activity:

- (1) Prepare an existing resource and site analysis map (ERSAM) showing environmentally sensitive areas, including but not limited to, steep slopes, ponds, lakes, streams, wetlands, hydric soils, vernal pools, stream buffers and hydrologic soil groups. Land development, any existing recharge areas, and other requirements outlined in the municipal SALDO shall also be included.
- (2) Establish a stream buffer according to § 78-42.
- (3) Prepare a draft project layout avoiding sensitive areas identified in Subsection B(1).
- (4) Identify site-specific existing conditions drainage areas, discharge points, recharge areas, and hydrologic soil groups A and B (areas conducive to infiltration).
- (5) Evaluate nonstructural stormwater management alternatives:
 - (a) Minimize earth disturbance.
 - (b) Minimize impervious surfaces.

- (c) Break up large impervious surfaces.
- (6) Satisfy the infiltration volume requirements (§ 78-36) and provide for stormwater pretreatment prior to infiltration.
- (7) Provide for water quality protection in accordance with § 78-37 water quality requirements.
- (8) Provide streambank erosion protection in accordance with § 78-38 streambank erosion requirements.
- (9) Determine into what management district the site falls (Appendix A) and conduct an existing conditions runoff analysis.
- (10) Prepare final project design to maintain existing conditions drainage areas and discharge points, to minimize earth disturbance and impervious surfaces and, to the maximum extent possible, to ensure that the remaining site development has no surface or point discharge.
- (11) Conduct a proposed conditions runoff analysis based on the final design that meets the management district requirements (§ 78-39).
- (12) Manage any remaining runoff prior to discharge through detention, bioretention, direct discharge or other structural control.

§ 78-36. Infiltration Volume Requirements

Providing for infiltration consistent with the natural hydrologic regime is required. Design of the infiltration facilities shall consider infiltration to compensate for the reduction in the recharge that occurs when the ground surface is disturbed or impervious surface is created. It is recommended that roof runoff be directed to infiltration BMPs that may be designed to compensate for the runoff from parking areas. These measures are required to be consistent with § 78-17 and to take advantage of utilizing any existing recharge areas. Infiltration may not be feasible on every site due to site-specific limitations such as soil type. If it cannot be physically accomplished, then the design professional shall be responsible to show that this cannot be physically accomplished.

If it cannot be physically accomplished, then the design professional shall be responsible for demonstrating to the satisfaction of the municipality that this cannot be physically accomplished on the site (e.g., shallow depth to bedrock or limiting zone, open voids, steep slopes, etc. per the PA BMP Manual. A financial hardship as defined in §78-24 is not acceptable to avoid implementing infiltration facilities. If infiltration can be physically accomplished, the volume of runoff to be infiltrated shall be determined from §78-36.A(2) depending on demonstrated site conditions, and shall be the greatest volume that can be physically infiltrated or alternative methods consistent with the PA BMP Manual (as amended) or other PADEP guidance, such as the Managed Release Concept, may be used to manage this volume with approval from the Municipal Engineer. For example:

- Any applicant (developer or redeveloper) shall first attempt to infiltrate the volume

required in §78-36.A(2)[a].

- If the §78-36.A(2)[a] requirement cannot be physically accomplished, then the applicant is required to attempt to infiltrate the volume required in §78-36.A(2)[b].
- Finally, if the §78-36.A(2)[b] infiltration volume cannot be physically accomplished, the applicant must, at a minimum, infiltrate the volume required in §78-36.A(2)[c].

A. Infiltration BMPs shall meet the following minimum requirements:

1. Infiltration BMPs intended to receive runoff from developed areas shall be selected based on suitability of soils and site conditions and shall be constructed on soils that have the following characteristics:

a. A minimum depth of 24 inches between the bottom of the BMP and the top of the limiting zone unless bioretention is used.

b. An infiltration rate sufficient to accept the additional stormwater load and dewater completely as determined by field tests conducted by the applicant's design professional.

c. The infiltration facility shall be capable of completely infiltrating the retention (infiltration) volume (Re_v) below grade within four days (96 hours).

d. Pretreatment shall be provided prior to infiltration.

2. The size of the infiltration facility shall be based upon the following volume criteria:

a. Modified Control Guideline One (MCG-1) of the PA BMP Manual – The retention (infiltration) volume (Re_v) to be captured and infiltrated shall be the net 2-year 24-hour volume. The net volume is the difference between the post-development runoff volume and the pre-development runoff volume. The post-development total runoff volume for all storms equal to or less than the 2-year 24-hour duration precipitation shall not be increased. For modeling purposes, existing (pre-development) non-forested pervious areas must be considered meadow in good condition or its equivalent, and twenty (20) percent of existing impervious area, when present, shall be considered meadow in good condition.

b. Infiltrating the entire Re_v volume in Section §78-36.A(2)[a] (above) may not be feasible on every site due to site-specific limitations such as shallow depth to bedrock or the water table. If it cannot be physically accomplished, then the following criteria from Modified Control Guideline Two (MCG-2) of the PA BMP Manual must be satisfied:

At least the first one-inch (1.0") of runoff from new or replacement impervious surfaces shall be infiltrated.

$Re_v = 1 \text{ (inch)} * \text{impervious area (square feet)} \div 12 \text{ (inches)} = \text{cubic feet (cf)}$

An asterisk (*) in equations denotes multiplication.

- c. Only if infiltrating the entire Re_v volume in §78-36.A(2)[b] cannot be physically accomplished, then the following minimum criteria from Modified Control Guideline Two (MCG-2) of the PA BMP Manual must be satisfied:

Wherever possible, infiltration facilities should be designed to accommodate infiltration of the entire water quality volume (WQv) in §78-36.A(2)[a]; however, in all cases at least the first one-half inch (0.5") of the WQv shall be infiltrated. The minimum infiltration volume (Re_v) required would, therefore, be computed as:

$$Re_v = I * \text{impervious area (square feet)} \div 12 \text{ (inches)} = \text{cubic feet (cf)}$$

An asterisk (*) in equations denotes multiplication.

Where:

I = The maximum equivalent infiltration amount (inches) that the site can physically accept or 0.50 inch, whichever is greater.

The retention volume values derived from the methods in §78-36.A(2)[a], §78-36.A(2)[b], or §78-36.A(2)[c] is the minimum volume the Applicant must control through an infiltration BMP facility. If site conditions preclude capture of runoff from portions of the impervious area, the infiltration volume for the remaining area should be increased an equivalent amount to offset the loss.

Only if the minimum of 0.50 inch of infiltration requirement cannot be physically accomplished, a waiver from §78-36, Infiltration Volume Requirements, is required from the Municipality.

- B. Soils. A detailed soils evaluation of the project site shall be required to determine the suitability of infiltration facilities. The evaluation shall be performed by a qualified design professional and at a minimum address soil permeability, depth to bedrock, and subgrade stability. The general process for designing the infiltration BMP shall be:

1. Analyze hydrologic soil groups as well as natural and man-made features within the site to determine general areas of suitability for infiltration practices. In areas where development on fill material is under consideration, conduct geotechnical investigations of subgrade stability; infiltration may not be ruled out without conducting these tests.
2. Provide field tests such as required in the PA BMP Manual.
3. Design the infiltration structure for the required retention (Re_v) volume based on field-determined capacity at the level of the proposed infiltration surface.
4. If on-lot infiltration structures are proposed by the applicant's design

professional, it must be demonstrated to Haverford Township that the soils are conducive to infiltrate on the lots identified.

C. Stormwater hotspots.

(1) Below is a list of examples of designated hotspots. If a site is designated as a hotspot, it has important implications for how stormwater is managed. First and foremost, untreated stormwater runoff from hotspots shall not be allowed to recharge into groundwater where it may contaminate water supplies. Therefore, the groundwater recharge requirement shall NOT be applied to development sites that fit into the hotspot category (the entire WQv must still be treated). Second, a greater level of stormwater treatment shall be considered at hotspot sites to prevent pollutant wash off after construction. The Environmental Protection Agency's (EPA) NPDES stormwater program requires some industrial sites to prepare and implement a stormwater pollution prevention plan. Stormwater runoff from hotspots shall be pretreated prior to surface or groundwater infiltration to prevent pollutant runoff. Industrial sites referenced in 40 CFR 125 are examples of hotspots.

(a) Examples of hotspots:

Vehicle salvage yards and recycling facilities

Vehicle fueling stations

Vehicle service and maintenance facilities

Vehicle and equipment cleaning facilities

Fleet storage areas (bus, truck, etc.)

Industrial sites based on Standard Industrial Codes

Marinas (service and maintenance)

Outdoor liquid container storage

Outdoor loading/unloading facilities

Public works storage areas

Facilities that generate or store hazardous materials

Commercial container nursery

Contaminated sites/brownfields

Other land uses and activities as designated by an appropriate review authority

(b) The following land uses and activities are not normally considered hotspots:

Residential streets and rural highways

Residential development

Institutional development

Office developments

Nonindustrial rooftops

Pervious areas, except golf courses and nurseries [which may need an integrated pest management (IPM) plan].

(2) While large highways [average daily traffic volume (ADT) greater than 30,000] are not designated as stormwater hotspots, it is important to ensure that highway stormwater management plans adequately protect groundwater.

(3) The Environmental Protection Agency's (EPA) NPDES stormwater program requires some industrial sites to prepare and implement a stormwater pollution prevention plan.

- D. Infiltration facilities should, to the greatest extent practicable, be located to avoid introducing contaminants via groundwater, and be in conformance with an approved source water protection assessment or source water protection plan.
- E. Roadway drainage systems should provide an opportunity to capture accidental spills. Road de-icing material storage facilities shall be designed to avoid salt and chloride runoff from entering waterways and infiltration facilities. The qualified design professional shall evaluate the possibility of groundwater contamination from the proposed infiltration facility and perform a hydrologic justification study if possible.
- F. Extreme caution shall be exercised where infiltration is proposed in SWPAs as defined by the local municipality or water authority.
- G. Infiltration facilities shall be used in conjunction with other innovative or traditional BMPs, stormwater control facilities, and nonstructural stormwater management alternatives.
- H. Extreme caution shall be exercised where salt or chloride (municipal salt storage) would be a pollutant since soils do little to filter this pollutant, and it may contaminate the groundwater. The qualified design professional shall evaluate the possibility of groundwater contamination from the proposed infiltration facility and perform a hydrogeologic justification study if necessary.
- I. The antidegradation analysis found in Chapter 93 shall be applied in HQ or EV streams.
- J. An impermeable liner will be required in detention basins where the possibility of

groundwater contamination exists. A detailed hydrogeologic investigation may be required by Haverford Township.

- K. Haverford Township shall require the applicant to provide safeguards against groundwater contamination for land uses that may cause groundwater contamination should there be a mishap or spill.

§ 78-37. Water quality requirements.

The applicant shall comply with the following water quality requirements of this article.

A. No regulated earth disturbance activities within Haverford Township shall commence until approval by Haverford Township of a plan which demonstrates compliance with postconstruction state water quality requirements.

B. The BMPs shall be designed, implemented, and maintained to meet state water quality requirements and any other more stringent requirements as determined by Haverford Township.

C. To control post-construction stormwater impacts from regulated activities and conform to state water quality requirements, BMPs which replicate pre-development stormwater infiltration and runoff conditions must be provided in the site design such that post-construction stormwater discharges do not degrade the physical, chemical, or biological characteristics of the receiving waters. The green infrastructure and Low Impact Development (LID) practices provided in the PA BMP Manual, as well as the guidance on green infrastructure and LID provided in Appendix E shall be utilized for all regulated activities wherever possible. This may be achieved by the following:

- (1) Infiltration: replication of preconstruction stormwater infiltration conditions;
- (2) Treatment: use of water quality treatment BMPs to ensure filtering out of the chemical and physical pollutants from the stormwater runoff; and
- (3) Streambank and streambed protection: management of volume and rate of postconstruction stormwater discharges to prevent physical degradation of receiving waters (e.g., from scouring).

D. Developed areas shall provide adequate storage and treatment facilities necessary to capture and treat stormwater runoff. The infiltration volume computed under § 78-36 may be a component of the water quality volume if the applicant chooses to manage both components in a single facility. If the infiltration volume is less than the water quality volume, the remaining water quality volume may be captured and treated by methods other than infiltration BMPs. The required water quality volume (WQv) is the storage capacity needed to capture and treat a portion of stormwater runoff from the developed areas of the site.

- (1) To achieve this goal, the following criterion is established:

The Post-construction total runoff volume shall not exceed the Predevelopment total runoff volume for all storms equal to or less than the two-year, 24-hour duration precipitation (design storm). If the Township Engineer concurs that this criterion cannot be met, a minimum of one half (0.5)-inches of runoff from all Regulated Impervious Surfaces shall be managed. For modeling purposes, existing (pre-development) non-forested pervious areas must be considered meadow in good condition or its equivalent, and twenty (20) percent of existing impervious area, when present, shall be considered meadow in good condition.

This volume requirement can be managed by the permanent volume of a wet basin or the detained volume from other BMPs. Where appropriate, wet basins shall be utilized for water quality control and shall follow the guidelines of the PA BMP Manual referenced in Appendix G.

Release of water can begin at the the start of the storm (i.e. the invert of the water quality orifice is at the inver of the facility). The design of the facility shall provide for protection from clogging and unwanted sedimentation.

- E. For areas within defined special protection subwatersheds that include EV and HQ waters, the temperature and quality of water and streams shall be maintained through the use of temperature-sensitive BMPs and stormwater conveyance systems.
- F. To accomplish the above, the applicant shall submit original and innovative designs to the Township engineer for review and approval. Such designs may achieve the water quality objectives through a combination of different BMPs.
- G. Evapotranspiration may be quantified and credited towards meeting volume requirements according to the PADEP Post Construction Stormwater Management (PCSM) Spreadsheet and Instructions (December 2020) or the most recent guidance from PADEP.
- H. Evidence of any necessary permit(s) for regulated earth disturbance activities from the appropriate DEP regional office must be provided to Haverford Township.

§ 78-38. Streambank erosion requirements.

A. In addition to the control of water quality volume (in order to minimize the impact of stormwater runoff on downstream streambank erosion), the primary requirement is to design a BMP to detain the proposed conditions two-year, twenty-four-hour design storm to the existing conditions one-year flow using the SCS Type II distribution. Additionally, provisions shall be made (such as adding a small orifice at the bottom of the outlet structure) so that the proposed conditions one-year storm takes a minimum of 24 hours to drain from the facility from a point where the maximum volume of water from the one-year storm is captured (i.e., the maximum water surface elevation is achieved in the facility). Release of water can begin at the start of the storm (i.e., the invert of the water quality orifice is at the invert of the facility).

B. The minimum orifice size in the outlet structure to the BMP shall be three inches in diameter where possible, and a trash rack shall be installed to prevent clogging. On sites with small drainage areas contributing to this BMP that do not provide enough runoff volume to allow a twenty-four-hour attenuation with the three-inch orifice, the calculations shall be submitted showing this condition. Orifice sizes less than three inches can be utilized, provided that the design will prevent clogging of the intake.

C. In "Conditional Direct Discharge Districts" (District C) only (see § 78-39), the objective is not to attenuate the storms greater than the two-year recurrence interval. This can be accomplished by configuring the outlet structure not to control the larger storms or by a bypass channel that diverts only the two-year stormwater runoff into the basin or conversely, diverts flows in excess of the two-year storm away from the basin.

§ 78-39. Stormwater peak rate control and management districts.

A. The Darby and Cobbs Creeks watershed has been divided into stormwater management districts as shown on the Management District Map in Appendix A. In addition to the requirements specified in Table 408.1 below, the erosion and sedimentation control (§ 78-34), the nonstructural project design (§ 78-35), the infiltration volume requirements (§ 78-36), the water quality (§ 78-37), and the streambank erosion (§ 78-38) requirements shall be implemented.

(1) Standards for managing runoff from each subarea in the Darby and Cobbs Creeks watershed for the two-, five-, ten-, twenty-five-, fifty-, and one-hundred-year design storms are shown in Table 408.1. Development sites located in each of the management districts must control proposed conditions runoff rates to existing conditions runoff rates for the design storms in accordance with Table 408.1.

Table 408.1

Peak Rate Control Standards by Stormwater

Management District in the

Darby-Cobbs Creek Watershed

District	Proposed Condition Design Storm	Existing Condition Design Storm
A	2 – year	1 – year
	5 – year	5 – year
	10 – year	10 – year

	10 – year	5 – year
	25 – year	10 – year
	50 – year	25 – year
	100 – year	100 – year
B-2	2 – year	1 – year
	5 – year	2 – year
	25 – year	5 – year
	50 – year	10 – year
	100 – year	100 – year

C Conditional Direct Discharge District

(2) In District C, development sites that can discharge directly to the Darby-Cobbs Creek main channel, major tributaries, or indirectly to the main channel through an existing stormwater drainage system (i.e., storm sewer or tributary) may do so without control of the proposed conditions peak rate of runoff greater than the five-year storm. Sites in District C will still have to comply with the groundwater recharge and infiltration volume requirement criteria, the water quality criteria, and streambank erosion criteria. If the proposed conditions runoff is intended to be conveyed by an existing stormwater drainage system to the main channel, assurance must be provided that such system has adequate capacity to convey the flows greater than the two-year existing conditions peak flow or will be provided with improvements to furnish the required capacity. When adequate capacity in the downstream system does not exist and will not be provided through improvements, the proposed conditions peak rate of runoff must be controlled to the existing conditions peak rate as required in District A provisions (i.e., ten-year proposed conditions flows to ten-year existing conditions flows) for the specified design storms.

B. General. Proposed conditions rates of runoff from any regulated activity shall not exceed the peak release rates of runoff from existing conditions for the design storms specified on the Stormwater Management District Watershed Map (Appendix A) and this section of the article.

C. District boundaries. The boundaries of the stormwater management districts are shown on an official map that is available for inspection at the municipal and County Planning offices. A copy of the official map at a reduced scale is included in Appendix A. The

exact location of the stormwater management district boundaries as they apply to a given development site shall be determined by mapping the boundaries using the two-foot topographic contours (or most accurate data required) provided as part of the SWM site plan.

- D. Sites located in more than one district. For a proposed development site located within two or more stormwater management district category subareas, the peak discharge rate from any subarea shall meet the management district criteria for which the discharge is located. The calculated peak discharges shall apply regardless of whether the grading plan changes the drainage area by subarea. An exception to the above may be granted if discharges from multiple subareas recombine in proximity to the discharge site. In this case, peak discharge in any direction may follow Management District A criteria, provided that the overall site discharge meets the management district criteria for which the discharge is located.
- E. Off-site areas. Off-site areas that drain through a proposed development site are not subject to release rate criteria when determining allowable peak runoff rates. However, on-site drainage facilities shall be designed to safely convey off-site flows through the development site.
- F. Site areas. Where the site area to be impacted by a proposed development activity differs significantly from the total site area, only the proposed impact area utilizing stormwater management measures shall be subject to the management district criteria. In other words, unimpacted areas bypassing the stormwater management facilities would not be subject to the management district criteria.
- G. "No harm" option. For any proposed development site not located in a Conditional Direct Discharge District, the applicant has the option of using a less-restrictive runoff control (including no detention) if the applicant can prove that "no harm" would be caused by discharging at a higher runoff rate than that specified by the stormwater management plan. The "no harm" option is used when an Applicant can prove that the proposed conditions hydrographs can match existing conditions hydrographs and if it can be proved that the proposed conditions will not cause increases in peaks at all points downstream. Proof of "no harm" must be shown based upon the following downstream impact evaluation which shall include a downstream hydraulic capacity analysis consistent with Subsection **H** to determine if adequate hydraulic capacity exists. The applicant shall submit to Haverford Township this evaluation of the impacts due to increased downstream stormwater flows in the watershed.
 - (1) The hydrologic regime of the site must be maintained.
 - (2) The downstream impact evaluation shall include hydrologic and hydraulic calculations necessary to determine the impact of hydrograph timing modifications due to the proposed development upon a dam, highway, structure, natural point of restricted streamflow, or any stream channel section established with the concurrence of the municipality.

- (3) The evaluation shall continue downstream until the increase in flow diminishes due to additional flow from tributaries and/or stream attenuation.
- (4) The peak flow values to be used for downstream areas for the design return period storms (two-, five-, ten-, fifty-, and one-hundred-year) shall be the values from the calibrated model for the respective watershed. These flow values can be obtained from the original Act 167 watershed stormwater management plans.
- (5) Applicant-proposed runoff controls which would generate increased peak flow rates at storm drainage problem areas would, by definition, be precluded from successful attempts to prove "no-harm," except in conjunction with proposed capacity improvements for the problem areas consistent with Subsection H.
- (6) Financial distress shall not constitute grounds for the municipality to approve the use of the "no-harm" option.
- (7) Capacity improvements to conveyance facilities or obstructions may be provided as necessary to implement the "no harm" option as long as it can be demonstrated through the downstream hydraulic capacity analysis that the improvements would not create any harm downstream.
- (8) Any "no harm" justifications shall be submitted by the applicant as part of the SWM site plan submission per this article.

H. Downstream hydraulic capacity analysis. Any downstream hydraulic capacity analysis conducted in accordance with this article shall use the following criteria for determining adequacy for accepting increased peak flow rates:

- (1) Natural or man-made channels or swales must be able to convey the increased runoff associated with a two-year return period event within their banks at velocities consistent with protection of the channels from erosion. Acceptable velocities shall be based upon criteria included in the DEP Erosion and Sediment Pollution Control Program Manual.
 - (2) Natural or man-made channels or swales must be able to convey increased twenty-five-year return period runoff without creating any hazard to persons or property.
 - (3) Culverts, bridges, storm sewers, or any other facilities which need to pass or convey flows from the tributary area must be designed in accordance with DEP Chapter 105 regulations (if applicable) and, at minimum, pass the increased twenty-five-year return period runoff.
 - (4) Water quality requirements as defined in §78-37.
 - (5) Post-construction peak rates shall not exceed the existing peak rates for the respective sub-area.
- I. Alternate criteria for redevelopment sites. For redevelopment sites, one of the following minimum design parameters shall be accomplished, whichever is most appropriate for

the given site conditions as determined by Haverford Township;

- (1) Meet the full requirements specified by Table 408.1 and Stormwater peak rate control and management districts, § 78-39 ; or
- (2) Reduce the total pre-development impervious surface on the site by at least 20% based upon a comparison of existing impervious surface to regulated impervious surface. In this case, calculations must be provided that show the peak rate has not increased.

§ 78-40. Calculation Methodology.

A. Stormwater runoff from all development sites with a drainage area of greater than five (5) acres shall be calculated using a generally accepted calculation technique that is based on the NRCS soil cover complex method. Table 409.1 summarizes acceptable computation methods, and the method selected by the design professional shall be based on the individual limitations and suitability of each method for a particular site. Credits providing an automatic reduction in impervious area and a corresponding reduction in stormwater impacts for the reduction of design volume, peak rate, and channel protection are available for protecting existing trees as well as revegetating and reforestation as outlined in the PA DEP BMP Manual, for sites with earth disturbance of one (1) acre or greater. No more than 25% of the Volume Reduction may be met through Nonstructural BMP credits.

ss

Table 409.1

**Acceptable Computation Methodologies
For Stormwater Management Plans**

Method	Developed By	Applicability
TR-20 (or commercial computer package based on TR-20)	USDA NRCS	Applicable where use of full hydrology computer model is desirable or necessary.
TR-55 (or commercial computer package based on TR-55)	USDA NRCS	Applicable for land development plans where limitations described in TR-55.
HEC-1/HEC-HMS	US Army Corps of Engineers	Applicable where use of a full hydrologic computer is desirable or necessary.
PSRM	Penn State University	Applicable where use of a hydrologic model is desirable or necessary; simpler than TR-20 or

Table 409.1

		HEC-1.
Other methods	Varies	Other computation methodologies approved by the municipality and/or municipal Engineer.
HEC RAS	US Army Corp of Engineers	"No harm" option

B. All calculations consistent with this article using the soil cover complex method shall use the appropriate design rainfall depths for the various return period storms. Rainfall depths shall be according to NOAA Atlas 14 values consistent with a partial duration series. When stormwater calculations are performed for routing procedures or water quality functions, the duration of rainfall shall be twenty-four (24) hours.

C. The following criteria shall be used for runoff calculations:

(1) For development sites not considered redevelopment, the ground cover used in determining the existing conditions flow rates shall be as follows:

(a) Wooded sites shall use a ground cover of "woods in good condition." Portions of a site having more than one viable tree of a DBH of six inches or greater per 1,500 square feet shall be considered "wooded" where such trees existed within three years of application.

(b) The undeveloped portion of the site including agriculture, bare earth and fallow ground, shall be considered as "meadow in good condition," unless the natural ground cover generates a lower curve (CN) number or Rational "c" value (i.e., woods) as listed in Tables F-2 or F-3 in Appendix F of this article.

(2) For development and redevelopment sites, the ground cover used in determining the existing conditions flow rates for the developed portion of the site shall be based upon actual land cover conditions.

D. All calculations using the Rational Method shall use rainfall intensities consistent with appropriate times of concentration (duration) and storm events with rainfall intensities obtained from NOAA Atlas 14 partial duration series estimates, or the latest version of the PennDOT Drainage Manual (PDM Publication 584). Times of concentration shall be calculated based on the methodology recommended in the respective model used. Times of concentration for channel and pipe flow shall be computed using a minimum of five (5) minutes.

E. Runoff curve numbers (CN) for both existing and proposed conditions to be used in the

soil cover complex method shall be obtained from Table F-2 in Appendix F of this article.

- F. Runoff coefficients (c) for both existing and proposed conditions for use in the rational method shall be obtained from Table F-3 in Appendix F of this article.
- G. Hydraulic computations to determine the capacity of pipes, culverts, and storm sewers shall be consistent with methods and computations contained in the Federal Highway Administration Hydraulic Design Series Number 5 (Publication No. FWHA-NHI-01-020 HDS No. 5). Hydraulic computations to determine the capacity of open channels shall be consistent with methods and computations contained in the Federal Highway Administration Hydraulic Engineering Circular Number 15 (Publication No. FHWA-BHI-05-114 HEC 15). Values for Manning's roughness coefficient (n) shall be consistent with Table F-4 in Appendix F.
- H. Outlet structures for stormwater management facilities shall be designed to meet the performance standards of this article using any generally accepted hydraulic analysis technique or method.
- I. The design of any stormwater detention facilities intended to meet the performance standards of this article shall be verified by routing the design storm hydrograph through these facilities using the storage-indication method. The design storm hydrograph shall be computed using a calculation method that produces a full hydrograph. Haverford Township may approve the use of any generally accepted full hydrograph approximation technique that shall use a total runoff volume that is consistent with the volume from a method that produces a full hydrograph.

§ 78-41. Other requirements.

- A. Any stormwater facility located on state highway rights-of-way shall be subject to approval by PennDOT.
- B. All wet basin designs shall incorporate biologic controls consistent with the West Nile Guidance found in Appendix H, PADEP document 363-0300-001 "Design Criteria – Wetlands Replacement/Monitoring," or contact the Pennsylvania State Cooperative Wetland Center (www.wetlands.psu.edu/) or the Penn State Cooperative Extension Office (www.extension.psu.edu/extmap.html).
- C. Any stormwater management facility (i.e., detention basin) required or regulated by this article designed to store runoff and requiring a berm or earthen embankment shall be designed to provide an emergency spillway to handle flow up to and including the one-hundred-year proposed conditions. The height of embankment must provide a minimum 1.0 foot of freeboard above the maximum pool elevation computed when the facility functions for the one-hundred-year proposed conditions inflow. Should any stormwater management facility require a dam safety permit under DEP Chapter 105, the facility shall be designed in accordance with Chapter 105 and meet the regulations of Chapter 105 concerning dam safety. Chapter 105 may be required to pass storms larger than the

one-hundred-year event.

- D. Any facilities that constitute water obstructions (e.g., culverts, bridges, outfalls, or stream enclosures) and any work involving wetlands governed by DEP Chapter 105 regulations (as amended or replaced from time to time by DEP) shall be designed in accordance with Chapter 105 and will require a permit from DEP.
- E. Any other drainage conveyance facility that does not fall under Chapter 105 regulations must be able to convey, without damage to the drainage structure or roadway, runoff from the twenty-five-year design storm with a minimum 1.0 foot of freeboard measured below the lowest point along the top of the roadway. Any facility that constitutes a dam as defined in DEP Chapter 105 regulations may require a permit under dam safety regulations. Any facility located within a PennDOT right-of-way must meet PennDOT minimum design standards and permit submission requirements. The larger events (50 year and 100 year) must also be safely conveyed in the direction of natural flow without creating additional damage to any drainage structures, nearby structures, or roadways.
- F. Any drainage conveyance facility and/or channel not governed by Chapter 105 regulations must be able to convey, without damage to the drainage structure or roadway, runoff from the twenty-five-year design storm. Conveyance facilities to or exiting from stormwater management facilities (i.e., detention basins) shall be designed to convey the design flow to or from that structure. Roadway crossings located within designated floodplain areas must be able to convey runoff from a one-hundred-year design storm. Any facility located within a PennDOT right-of-way must meet PennDOT minimum design standards and permit submission requirements.
- G. Conveyance facilities transporting flow to or exiting from stormwater management facilities (i.e. detention basins) shall be designed to convey the 100-year frequency storm.
- H. Roadway crossings or structures located within designated floodplain areas must be able to convey runoff from a 100-year design storm consistent with FEMA Floodplain Management requirements.
- I. Adequate erosion protection shall be provided along all open channels and at all points of discharge.
- J. The design of all stormwater management facilities shall incorporate sound engineering principles and practices. Haverford Township reserves the right to disapprove any design that would result in construction in or continuation of a stormwater problem area.

§78-42. Riparian Buffers

- A. Except as required by Chapter 102, if a perennial or intermittent stream passes through, or a waterbody (i.e., lake, pond, wetland) is present on the site, the Applicant shall create a Riparian Buffer extending a minimum of 100 feet, to either side of the top-of-bank of the channel, lake, or wetland

- B. The Riparian Buffer shall be planted with native vegetation and maintained in a vegetated state (Refer to Appendix B, Pennsylvania Native Plant List, contained in the PA BMP Manual or latest guidance document from PADEP).
1. The following provisions also apply to Riparian Buffers on lots in existence at the time of adoption of this Ordinance:
 - a. If the applicable rear or side yard setback is less than 50 feet, the buffer width may be reduced to twenty-five (25) percent of the setback or twenty-five (25) feet, whichever is greater.
 - b. If a stream traverses a site in a manner that significantly reduces the use of the site, the buffer may be either:
 - i. Reduced to twenty-five (25) feet on either side, with municipal approval, or
 - ii. Reduced to ten (10) feet with municipal waiver
 2. Permitted uses within the Riparian Buffer include the following, subject to municipal approval and provided that they comply with all federal, state, and local regulations:
 - a. Recreational trails. See Ordinance Appendix J Riparian Buffer Trail Guidelines.
 - b. Utility rights-of-way
 - c. Bridges
 - d. Other uses subject to Township approval.
 3. If an existing buffer is legally prescribed (i.e., deed, covenant, easement, etc.) and it exceeds the requirements of this Ordinance, the existing buffer shall be maintained.

§ 78-43. Inspections.

- A. The Municipal Engineer or his municipal designee shall inspect all phases of the installation of the permanent BMPs and/or stormwater management facilities as deemed appropriate by the municipal Engineer.
- B. During any stage of the work, if the municipal Engineer or his municipal designee determines that the permanent BMPs and/or stormwater management facilities are not being installed in accordance with the approved stormwater management plan, the municipality shall revoke any existing permits or other approvals and issue a cease and desist order until a revised SWM site plan is submitted and approved, as specified in this article, and until the deficiencies are corrected.
- C. A final inspection of all BMPs and/or stormwater management facilities shall be conducted by the municipal Engineer or his municipal designee to confirm compliance with the approved SWM site plan prior to the issuance of any occupancy permit.

§78-44. As-Built Plans, Completion Certificate, and Final Inspection

- A. The developer shall be responsible for providing as-built plans of all SWM BMPs included in the approved SWM site plan for activities involving regulated impervious surfaces 500 sq. ft. or greater and for earth disturbances 5,000 sq. ft. or greater. The as-built plans and all explanation of any discrepancies with the construction plans shall be submitted to the Municipality within three (3) months of the completion of construction of the SWM BMPs.
- B. As-built plans shall show the location (including latitude and longitude coordinates) and as-built conditions of all SWM BMPs and include the following information: impervious surfaces included in the approved SWM site plan; topographic contours; and existing, proposed, and built impervious surfaces shown in the as-built drawings.
- C. The as-built submission shall include a certification of completion signed by a Design Professional verifying that all permanent SWM BMPs have been constructed according to the approved plans and specifications.
- D. The municipality will review the as-built submission for consistency with the approved SWM site plan as well as actual conditions at the project site. After receipt of the completion certification by the Municipality, the Municipality may conduct a final inspection.
- E. If an NPDES Permit for Stormwater Discharges Associated with Construction Activities was required for the Regulated Activity, a Notice of Termination (NOT) approval must be obtained upon completion of construction prior to final approval of the project by the Municipality.

§ 78-45. Municipality SWM site plan review and inspection fee.

Fees shall be established by Haverford Township to defray plan review and construction inspection costs incurred by the municipality. All fees shall be paid by the applicant at the time of SWM site plan submission. A review and inspection fee schedule shall be established by resolution of the Board of Commissioners based on the size of the regulated activity and based on the municipality's costs for reviewing SWM site plans and conducting inspections pursuant to § 78-43 Haverford Township shall periodically update the review and inspection fee schedule to ensure that review costs are adequately reimbursed.

§ 78-46 Expenses covered by fees.

- A. The fees required by this article shall at a minimum cover:
 - a. Administrative costs.
 - b. The review of the SWM site plan by Haverford Township and the Township Engineer.
 - c. The inspection of stormwater management facilities and drainage improvements during construction.

- d. The site inspections.
- e. The inspection of stormwater management facilities and drainage improvements during construction.
- f. Attendance at meetings.
- g. The final inspection upon completion of the stormwater management facilities and drainage improvements presented in the SWM site plan
- h. Any additional work required to enforce any permit provisions regulated by this article, correct violations, and assure proper completion of stipulated remedial actions.
- i. In addition, any and all costs for the review of plans and the inspection of stormwater management facilities and drainage improvements during construction by the municipal engineer, shall be deducted from the applicant's escrow account.

§ 78-47. Performance guarantee.

A. For SWM Site Plans that involve subdivision and land development, the applicant shall provide a financial guarantee to the Municipality for the timely installation and proper construction of all stormwater management controls as

(1) required by the approved SWM site plan equal to or greater than the full construction cost of the required controls; or

(2) The amount and method of payment provided for in the SALDO.

B. For other regulated activities, Haverford Township may require a financial guarantee from the applicant.

§ 78-48 Responsibilities for operations and maintenance (O&M) of stormwater controls and BMPs.

A. No regulated earth disturbance activities within Haverford Township shall commence until approval by the municipality of a stormwater control and BMP operations and maintenance plan that describes how the permanent (e.g., postconstruction) stormwater controls and BMPs will be properly operated and maintained.

B. The Township shall make the final determination on the continuing maintenance responsibilities prior to final approval of the SWM Site Plan. The municipality may require a dedication of such facilities as part of the requirements for approval of the SWM Site Plan. Such a requirement is not an indication that the municipality will accept the facilities. The Township reserves the right to accept or reject the ownership and operating responsibility for any portion of the stormwater management controls.

C. Facilities, areas, or structures used as SWM BMPs shall be enumerated as permanent real estate appurtenances and recorded as deed restrictions or conservation easements that run with the land.

A. The O&M Plan shall be recorded as a restrictive deed covenant that runs with the land.

B. The Municipality may take enforcement actions against an owner for any failure to satisfy the provisions of this Article.

D. The following items shall be included in the stormwater control and BMP operations and maintenance plan:

(1) Map(s) of the project area, in a form that meets the requirements for recording at the offices of the Recorder of Deeds of Delaware County. The contents of the maps(s) shall include, but not be limited to:

- (a) Clear identification of the location and nature of permanent stormwater controls and BMPs;
- (b) The location of the project site relative to highways, municipal boundaries, or other identifiable landmarks;
- (c) Existing and final contours at intervals of two feet, or others as appropriate;
- (d) Existing streams, lakes, ponds, or other bodies of water within the project site area;
- (e) Other physical features, including flood hazard boundaries, sinkholes, streams, existing drainage courses, and areas of natural vegetation to be preserved;
- (f) The locations of all existing and proposed utilities, sanitary sewers, and waterlines within 50 feet of property lines of the project site;
- (g) Proposed final changes to the land surface and vegetative cover, including the type and amount of impervious area that would be added;
- (h) Proposed final structures, roads, paved areas, and buildings; and
- (i) A fifteen-foot-wide access easement around all stormwater controls and BMPs that would provide ingress to and egress from a public right-of-way.

(2) A description of how each permanent stormwater control and BMP will be operated and maintained, and the identity and contact information associated with the person(s) responsible for operations and maintenance.

(3) The name of the project site, the name and address of the owner of the property, and the name of the individual or firm preparing the plan.

(4) A statement, signed by the landowner, acknowledging that the stormwater controls and BMPs are fixtures that can be altered or removed only after approval by

Haverford Township.

C. The stormwater control and BMP operations and maintenance plan for the project site shall establish responsibilities for the continuing operation and maintenance of all permanent stormwater controls and BMPs, as follows:

(1) If a plan includes structures or lots which are to be separately owned and in which streets, sewers, and other public improvements are to be dedicated to Haverford Township, stormwater controls and BMPs may also be dedicated to and maintained by the municipality;

(2) If a plan includes operations and maintenance by a single ownership or if sewers and other public improvements are to be privately owned and maintained, then the operation and maintenance of stormwater controls and BMPs shall be the responsibility of the owner or private management entity.

§ 78-49. Municipal review of a stormwater control and BMP operations and maintenance plan.

A. The municipality shall review the stormwater control and BMP operations and maintenance plan for consistency with the purposes and requirements of this article and any permits issued by DEP.

B. The municipality shall notify the applicant in writing whether or not the stormwater control and BMP operations and maintenance plan is approved.

C. The municipality will require an as-built plan showing all constructed stormwater controls and BMPs and an explanation of any discrepancies with the approved operations and maintenance plan.

§ 78-50. Adherence to an approved stormwater control and BMP operations and maintenance plan.

It shall be unlawful to alter or remove any permanent stormwater control and BMP required by an approved stormwater control and BMP operations and maintenance plan or to allow the property to remain in a condition which does not conform to an approved stormwater control and BMP operations and maintenance plan.

§ 78-51. Operation and Maintenance Agreements for privately owned stormwater controls and BMPs.

A. Prior to final approval of the SWM Site Plan, the property owner shall sign and record an Operation and Maintenance (O&M) Agreement as drafted by the Township (in a similar form as Appendix I, but as may be amended by the Township) covering all stormwater control facilities which are to be privately owned. The maintenance agreement shall be transferred with transfer of ownership in perpetuity.

a. The owner, successor and assigns shall maintain all facilities in accordance with the approved maintenance schedule in the O&M Agreement.

- b. The owner shall convey to the Township conservation easements to assure access for periodic inspections by the Township and maintenance, as necessary.
 - c. The owner shall keep on file with the Township the name, address, and telephone number of the person or company responsible for maintenance activities; in the event of a change, new information shall be submitted by the owner to the Municipality within ten (10) working days of the change.
- B. The owner is responsible for operation and maintenance (O&M) of the SWM BMPs. If the owner fails to adhere to the O&M Agreement, the Township may perform the services required and charge the owner appropriate fees. Nonpayment of fees may result in a lien against the property.
- C. Other items may be included in the agreement where determined necessary to guarantee the satisfactory operation and maintenance of all permanent stormwater controls and BMPs. The agreement shall be subject to the review and approval of the Township.

§ 78-52. Stormwater management easements.

- A. Stormwater management easements are required for all areas used for off-site stormwater control, unless a waiver is granted by the Township.
- B. Stormwater management easements shall be provided by the applicant or property owner if necessary for access for inspections and maintenance or the preservation of stormwater runoff conveyance, infiltration, and detention areas and other stormwater controls and BMPs by persons other than the property owner. The purpose of the easement shall be specified in any agreement under § 78-51.

§ 78-53. Maintenance agreement for privately owned stormwater facilities.

- A. Prior to final approval of the site's SWM site plan, the applicant shall sign and record the Operation and Maintenance (O&M) Agreement as drafted by the Township, covering all stormwater control facilities that are to be privately owned.
- B. Other items may be included in the agreement where determined necessary to guarantee the satisfactory maintenance of all facilities. The Operation and Maintenance (O&M) Agreement shall be subject to the review and approval of the Municipal Solicitor and Board of Commissioners.

§ 78-54. Recording of an approved stormwater control and BMP operations and maintenance plan and related agreements.

- A. The owner of any land upon which permanent stormwater controls and BMPs will be placed, constructed, or implemented, as described in the stormwater control and BMP operations and maintenance plan, shall record the following documents in the Office of the Recorder of Deeds for Delaware County within 15 days of approval of the stormwater control and BMP operations and maintenance plan by the municipality:

- (1) The operations and maintenance plan, or a summary thereof,
 - (2) Operations and Maintenance Agreement for Privately Owned Stormwater Controls and BMPs under § 78-51; and
 - (3) Stormwater Management Easements under § 78-52.
- B. The municipality may suspend or revoke any approvals granted for the project site upon discovery of failure on the part of the owner to comply with this section.

§ 78-55. Municipal Stormwater Control and BMP Operation and Maintenance Fund.

A. The Township shall inspect SWM BMPs, facilities, and/or structures installed under this Ordinance according to the following frequencies, at a minimum, to ensure the BMPs, facilities and/or structures continue to function as intended. Persons installing stormwater controls or BMPs shall be required to pay a specified amount to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to help defray costs of periodic inspections and maintenance expenses. The amount of the deposit shall be determined as follows:

- (1) If the stormwater control or BMP is to be privately owned and maintained, the deposit shall cover the cost of periodic inspections performed by Haverford Township for a period of 10 years, as estimated by the municipal Engineer. After that period of time, inspections will be performed at the expense of the municipality. The following minimum inspection frequencies are required:
 - 1) Annually for the first 5 years.
 - 2) Once every 3 years thereafter
 - 3) During or immediately after the cessation of a 25-year or greater storm, as determined by the Municipal Engineer.
 - 4) The Township Engineer may request that the landowners or landowner's designee submit an inspection report after the cessation of a 10-year or greater storm event if there is reason to believe that a BMP has sustained damage that impacts its ability to function as designed and if the BMP's failure would result in damage to downgradient properties.
- (2) If the stormwater control or BMP is to be owned and maintained by Haverford Township, the deposit shall cover the estimated costs for maintenance and inspections for 10 years. The municipal Engineer will establish the estimated costs utilizing information submitted by the applicant. The following minimum inspection frequencies are required:
 - 1) Annually for the first 5 years.
 - 2) Once every 3 years thereafter
 - 3) During or immediately after the cessation of a 25-year or greater storm, as

determined by the Municipal Engineer.

- (3) The above referenced inspections shall be conducted during or immediately following precipitation events or in dry weather conditions if the BMP design parameters include dewatering with a specified period of time. A written inspection report shall be created to document each inspection. The inspection report shall contain the date and time of the inspection, the individual(s) who completed the inspection, the location of the BMP, Stormwater Management Facility or structure inspected, observations on performance, and recommendations for improving performance, if applicable.
 - (4) The amount of the deposit to the fund shall be converted to present worth of the annual series values. The municipal Engineer shall determine the present worth equivalents, which shall be subject to the approval of the governing body.
- B. If a stormwater control or BMP is proposed that also serves as a recreational facility (e.g., ball field or lake), Haverford Township may reduce or waive the amount of the maintenance fund deposit based upon the value of the land for public recreational purpose.
- C. If at some future time a stormwater control or BMP (whether publicly or privately owned) is eliminated due to the installation of storm sewers or other storage facility, the unused portion of the maintenance fund deposit will be applied to the cost of abandoning the facility and connecting to the storm sewer system or other facility. Any amount of the deposit remaining after the costs of abandonment are paid will be returned to the depositor.
- D. If stormwater controls or BMPs are accepted by Haverford Township for dedication, the municipality may require persons installing stormwater controls or BMPs to pay a specified amount to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to help defray costs of operations and maintenance activities. The amount may be determined as follows:
- (1) The amount shall cover the estimated costs for operations and maintenance for 10 years, as determined by Haverford Township.
 - (2) The amount shall then be converted to present worth of the annual series values.
- E. If a stormwater control or BMP is proposed that also serves as a recreational facility (e.g., ball field or lake), Haverford Township may adjust the amount due accordingly.
- F. Haverford Township shall require applicants to pay a fee to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to cover long-term maintenance of stormwater controls and BMPs.
- G. Haverford Township may require applicants to pay a fee to the Municipal Stormwater Control and BMP Operation and Maintenance Fund to cover inspections, long term maintenance of stormwater BMPs and conveyances, and stormwater related problems

which may arise from the land development and earth disturbance.

§ 78-56. Prohibited Discharges and Connections.

- A. Any drain or conveyance, whether on the surface or subsurface, that allows any non-stormwater discharge including sewage, process wastewater, and wash water to enter the Township's separate storm sewer system, riparian buffers, wetlands, or other waters of this Commonwealth, and any connections to the storm drain system from indoor drains and sinks, is prohibited.
- B. No person in Haverford Township shall allow, or cause to allow, stormwater discharges into a regulated small MS4, or discharges into waters of this Commonwealth, which are not composed entirely of stormwater, except as provided in subsection C below, and discharges authorized under a state or federal permit.
- C. The following discharges are authorized unless they are determined to be significant contributors to pollution to a regulated small MS4 or to the waters of this Commonwealth:
 - a. Discharges from firefighting activities.
 - b. Discharges from potable water sources including water line flushing and fire hydrant flushing, if such discharges do not contain detectable concentrations of Total Residual Chlorine (TRC).
 - c. Non-contaminated irrigation drainage water.
 - d. Routine external building washdown (which does not use detergents or other compounds).
 - e. Non-contaminated HVAC condensation and water from geothermal systems.
 - f. Residential (i.e., not commercial) vehicle wash water where cleaning agents are not utilized.
 - g. Springs and water from crawl space pumps.
 - h. Uncontaminated water from foundation or from footing drains.
 - i. Flows from riparian habitats and wetlands.
 - j. Lawn watering.
 - k. Pavement washwaters where spills or leaks of toxic or hazardous materials have not occurred (unless all spill material has been removed) and where detergents are not used.
 - l. Uncontaminated groundwater
 - m. Non-contaminated hydrostatic test water discharges if such discharges do not contain detectable concentrations of TRC.

- n. Diverted stream flows.
- D. In the event that the municipality determines that any of the discharges identified in Subsection C significantly contribute pollutants to a regulated small MS4 or to the waters of this Commonwealth, or is so notified by DEP, the Township will notify the responsible person(s) to cease the discharge.
- E. Upon notice provided by the Township under §78-56.D the discharger will have a reasonable time, as determined by the Township, to cease the discharge consistent with the degree of pollution caused by the discharge.
- F. Nothing in this section shall affect a discharger's responsibilities under state law.

§ 78-57. Roof Drains and Sump Pumps.

- A. Roof drains and sump pumps shall not be connected to sanitary sewers.
- B. Roof drains and sump pumps shall not be connected to streets, storm sewers, or roadside ditches except on a case by case basis as determined by the Township.
- C. Roof drains and sump pumps shall discharge to infiltration areas or vegetative BMPs to the maximum extent practicable where advantageous to do so.

§ 78-58. Prohibited connections.

The following connections are prohibited, except as provided in § 78-56.C above:

- A. Any drain or conveyance, whether on the surface or subsurface, which allows any non-stormwater discharge including sewage, process wastewater, and wash water, to enter the separate storm sewer system, and any connections to the storm drain system from indoor drains and sinks.
- B. Any drain or conveyance connected from a commercial or industrial land use to the separate storm sewer system which has not been documented in plans, maps, or equivalent records and approved by Haverford Township.
- C. Any drain or conveyance that delivers non-stormwater discharges directly into wetlands, riparian buffers, or other waters of the Commonwealth is prohibited.

§ 78-59. Alteration of SWM BMPs

- A. No person shall modify, remove, fill, landscape, or alter any existing stormwater control or BMP unless it is part of an approved maintenance program without the written approval of Haverford Township.
- B. No person shall place any structure, fill, landscaping, or vegetation into a stormwater control or BMP or within a drainage easement which would limit or alter the functioning

of the stormwater control or BMP without the written approval of Haverford Township.

§ 78-60. Right-of-entry.

- A. Upon presentation of proper credentials, the Township or its designated agent may enter at reasonable times upon any property within the municipality to inspect the condition, implementation, or operation and maintenance of all erosion and sediment controls and permanent stormwater BMPs, conveyances, or other stormwater management facilities both during and after the completion of the regulated activity, or for compliance with any requirement of the stormwater structures and facilities in regard to any aspect regulated by this Ordinance.
- B. Stormwater control and BMP owners and operators shall allow persons working on behalf of Haverford Township ready access to all parts of the premises for the purposes of determining compliance with this article.
- C. Persons working on behalf of Haverford Township shall have the right to temporarily locate on any stormwater control or BMP in the municipality such devices as are necessary to conduct monitoring and/or sampling of the discharges from such stormwater control or BMP.
- D. Unreasonable delays in allowing the municipality access to a stormwater control or BMP is a violation of this article.
- E. If the property owner or representative does not grant access to the Municipality within 24 hours of the notification, it will be a violation of this Ordinance.

§ 78-61. Public nuisance.

- A. The violation of any provision of this article is hereby deemed a public nuisance.
- B. Each day that a violation continues shall constitute a separate violation.

§ 78-62. Enforcement generally.

- A. Whenever Haverford Township finds that a person has violated a prohibition or failed to meet a requirement of this article, the municipality may order compliance by written notice to the responsible person. Such notice may, without limitation, require the following remedies:
 - a. Performance of monitoring, analyses, and reporting;
 - b. Elimination of prohibited connections or discharges;
 - c. Cessation of any violating discharges, practices, or operations;
 - d. Abatement or remediation of stormwater pollution or contamination hazards and the restoration of any affected property;
 - e. Payment of a fine to cover administrative and remediation costs;

- f. Implementation of stormwater controls and BMPs; and
 - g. Operation and maintenance of stormwater controls and BMPs.
- B. Such notification shall set forth the nature of the violation(s) and establish a time limit for correction of these violations(s). Said notice may further advise that, if applicable, should the violator fail to take the required action within the established deadline, the work will be done by Haverford Township or designee, and the expense thereof shall be charged to the violator.
- C. Failure to comply within the time specified shall also subject such person to the penalty provisions of this article. All such penalties shall be deemed cumulative and shall not prevent the municipality from pursuing any and all other remedies available in law or equity.

§ 78-63. Suspension and revocation of permits and approvals.

- A. Any building, land development, or other permit or approval issued by the Township pursuant to this Ordinance may be suspended or revoked for:
- a. Non-compliance with or failure to implement any provision of the permit.
 - b. A violation of any provision of this Ordinance or any other applicable law, ordinance, rule, or regulation relating to the regulated activity.
 - c. The creation of any condition or the commission of any act during construction or development which constitutes or creates a hazard, nuisance, pollution, or endangers the life or property of others.
- B. A suspended permit or approval may be reinstated by the Municipality when:
- a. The Township engineer or designee has inspected and approved the corrections to the stormwater controls and BMPs or the elimination of the hazard or nuisance.
 - b. The Township is satisfied that the violation or the article, law, or rule and regulations has been corrected.
- C. A permit or approval that has been revoked by the Township cannot be reinstated. The applicant may apply for a new approval under the provisions of this Ordinance.
- D. Prior to revocation or suspension of a permit and at the request of the applicant, the governing body shall schedule a hearing to discuss the noncompliance if there is no immediate danger to life, public health, or property. The expense of a hearing shall be the applicant's responsibility.

§ 78-64. Violations and penalties.

- A. Any person violating the provisions of this article shall be guilty of a misdemeanor and upon conviction shall be subject to a fine of not more than \$1,000 for each violation, recoverable with costs, or imprisonment of not more than 90 days, or both. Each day that the violation continues shall be a separate offense.
- B. In addition, the Township, through its Solicitor, may institute injunctive, mandamus, or any other appropriate action or proceeding at law or in equity for the enforcement of this article. Any court of competent jurisdiction shall have the right to issue restraining orders, temporary or permanent injunctions, mandamus, or other appropriate forms of remedy or relief.

§ 78-65. Notification

In the event that a person fails to comply with the requirements of this article or fails to conform to the requirements of any permit issued hereunder, the Township shall provide written notification of the violation. Such notification shall state the nature of the violation(s) and establish a time limit for correction of these violation(s). Failure to comply within the time specified shall subject such person to the penalty provisions of this article. All such penalties shall be deemed cumulative and shall not prevent the Township from pursuing any and all remedies. It shall be the responsibility of the owner of the real property on which any regulated activity is proposed to occur, is occurring, or has occurred to comply with the terms and conditions of this article.

§78- 66. Enforcement

The Board of Commissioners is hereby authorized and directed to enforce all of the provisions of this article. All inspections regarding compliance with the SWM site plan shall be the responsibility of the Township Engineer or other qualified persons designated by the Board of Commissioners.

- A. A set of design plans approved by the Township shall be on file at the site throughout the duration of the construction activity. Periodic inspections may be made by the Township or designee during construction.
- B. It shall be unlawful for any person, firm, or corporation to undertake any regulated activity under § 78-17 on any property except as provided for in the approved SWM site plan and pursuant to the requirements of this article. It shall be unlawful to alter or remove any control structure required by the SWM site plan pursuant to this article or to allow the property to remain in a condition which does not conform to the approved SWM site plan.
- C. At the completion of the project and as a prerequisite for the release of the performance guarantee, the owner or his representatives shall:
 - (1) Provide a certification of completion from an engineer, architect, surveyor or other qualified person verifying that all permanent facilities have been constructed

according to the plans and specifications and approved revisions thereto.

(2) Provide a set of as-built (record) drawings.

D. After receipt of the certification by Haverford Township, a final inspection shall be conducted by the municipal Engineer or designated representative to certify compliance with this article.

E. Occupancy permit. An occupancy permit shall not be issued unless the certification of completion pursuant to § 78-66.C(1) has been secured. The occupancy permit shall be required for each lot owner and/or applicant for all subdivisions and land developments in Haverford Township.

§ 78-67. Appeals.

A. Any person aggrieved by any action of the Township or its designee may appeal to the Board of Commissioners of Haverford Township within 30 days of that action.

B. Any person aggrieved by any decision of the Board of Commissioners of Haverford Township may appeal to the County Court of Common Pleas in the County where the activity has taken place within 30 days of the municipal decision.

Section II. Attachments to Chapter 78. The following attachments, consolidated herein and attached to this Ordinance as **Exhibit “A”**, shall serve as the attachments/appendices to Chapter 78, as so referenced above.

Attachment 1 - Table 105.1 Applicability

Attachment 2 - Appendix A Watershed Map

Attachment 3 - Appendix B

Attachment 4 - Appendix C-1 SWM Site Plan Application

Attachment 5 - Appendix C-2 SWM Site Plan Checklist

Attachment 6 - Appendix D Review Procedure Flowchart, Darby-Cobbs Creeks Watershed
Stormwater Mgmt

Attachment 7 - Appendix E LID Practices

Attachment 8 - Appendix F Design Criteria

Attachment 9 - Appendix I Operations and Management Agreement

Attachment 10 - Appendix J Riparian Buffer Trail Guidelines

Section III. Redlined Ordinance for Reference. For ease of reference, the majority of deletions, additions and changes to Chapter 78, and a summary of the changes to the Attachments, are attached hereto as **Exhibit “B”**.

Section IV: Repealer. All Ordinances or parts of Ordinances inconsistent herewith or in conflict with any of the specific terms enacted hereby, to the extent of said inconsistencies or conflicts, are hereby specifically repealed.

Section V: Revisions. The Haverford Township Board of Commissioners does hereby reserve the right, from time to time, to adopt modifications of, supplements to, or amendments of this Ordinance.

Section VI: Severability. If any section, sentence, clause, phrase or word of this Ordinance shall be declared illegal, invalid or unconstitutional by any Court of competent jurisdiction, such declaration shall not prevent, preclude or otherwise foreclose enforcement of any of the remaining portions of this Ordinance.

Section VII: Effective Date. This amendment shall become effective upon the legal date of its adoption.

Section VIII: Failure To Enforce Not A Waiver. The failure of Haverford Township to enforce any provision of this Ordinance shall not constitute a waiver by the Township of its rights of future enforcement hereunder

Township of Haverford

Ordinance No. P14-2024

An Ordinance of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, further amending and supplementing Ordinance No. 1960, adopted June 30, 1986, and known as “General Laws of the Township of Haverford” Chapter 175, Vehicles and Traffic.

Be it enacted and ordained by the Board of Commissioners of the Township of Haverford, County of Delaware, Commonwealth of Pennsylvania, and it is hereby enacted and ordained by the authority of the same:

Section 1. § 175-94 Schedule XIX: Parking Time Limited

School Buses Parking Only March 1 through May 31, between the hours of 3:00 pm and 6:00 pm, Monday through Friday, the last 90 feet of the northeast section of the Polo Field parking lot, 109 County Line Road, Bryn Mawr.

Section 2. § 175-95 Schedule XX: Special Purpose Parking Zones

in front of 65 Rodmor Road.

Section 3. Upon effective date of this ordinance, the Highway Department shall install appropriate signs in the designated section or zones giving notice of the regulations aforesaid.

Section 4. Any ordinance or part of an ordinance to the extent that it is inconsistent herewith is hereby repealed.

Adopted this this 9th day of December, 2024

Township of Haverford

Resolution Number 2418-2024

Resolution for Preliminary/Final Land Development Plan approval for the Quadrangle for a building addition to Art Studio Building at 3300 Darby Road, Havertown

Whereas, Act 247 of 1968, the Pennsylvania Municipalities Planning Code, empowers the Haverford Township Board of Commissioners to regulate subdivisions and land developments within the Township; and

Whereas, Haverford Township desires orderly and appropriate land use and development to protect the health, safety, and welfare of residents; and

Whereas, HCP MA3 Pennsylvania, LP, owner of the property generally known as Quadrangle (“Applicant”) desires to develop the Art Studio Building located at 3300 Darby Road, Havertown, PA, Delaware County, known as D.C. Folio No. 22-04-00180-00 (“Property”) to add 938 square feet of building addition and related improvements as shown on the Plan (identified below)(“Project”). The Property is zoned R-1 Residential District and is located in the 4th Ward; and

Whereas, the Preliminary / Final Land Development plan submitted for the Project was prepared by Site Engineering Concepts, LLC, Southeastern, PA, dated August 29, 2024 coupled with requests for certain waivers/modifications from provisions of the Haverford Township Subdivision and Land Development Ordinance (Chapter 160 of the Haverford Township Code (“Code”)) (“SLDO”); and

Whereas, the Historical Commission of Haverford Township, at the public meeting of Monday, September 16, 2024, voted to recommend approval of the Plan based on the revised architectural plans for the Project submitted to the Township on August 22, 2024; and

Whereas, the Shade Tree Commission of Haverford Township, at the public meeting of Monday, September 23, 2024, voted to recommend approval of the Plan subject to certain revisions of the landscaping plans for the Project, which revisions have been submitted to the Township; and

Whereas, Pennoni Associates, the Township Engineer, issued a review letter for the Project dated September 26, 2024; and

Whereas, the Planning Commission of Haverford Township, at the public meeting of Thursday, October 10, 2024, voted to recommend approval of the Plan subject to the comments contained within the September 26, 2024 review letter, and prepared by Pennoni Associates; and

Whereas, Applicant submitted revised plans for the Project prepared by Site Engineering Concepts, LLC, Southeastern, PA, dated August 29, 2024, revised (No. 1) October 16, 2024 (“Plan”) and a response letter to the aforesaid September 26, 2024 Pennoni review letter; and

Whereas, Pennoni Associates, the Township Engineer, issued a revised review letter for the Project dated September 26, 2024, revised November 2, 2024 (“Revised Review Letter”). The Revised Review Letter included new comments referencing the curbing and sidewalk provisions of Code sections 160-5.B.(4)[a] and [c]; and

Whereas, Applicant submitted a supplemental waiver/modification request based on the new comments in the Revised Review Letter; and

WHEREAS, the Planning Commission of Haverford Township, at the public meeting of Thursday, November 14,, 2024, voted to recommend approval of the Plan supplemental waiver/modification request subject to certain additional recommendations; and

Whereas, said Plan has been submitted to the Board of Commissioners of the Township of Haverford for consideration in accordance with the Pennsylvania Municipalities Planning Code and pursuant to the Haverford Township Subdivision and Land Development Regulations, Ordinance 1960, Chapter 160, Sections 4. A and B.

Now, Therefore, be it Resolved by the Board of Commissioners of the Township of Haverford that the Plan is APPROVED subject to the following conditions:

A. Conditions of Plan Approval.

1. The Applicant must ensure that the Plan address any outstanding comments in the Revised Review Letter dated September 26, 2024, revised November 2, 2024 prepared by Pennoni Associates. Further, the Applicant shall comply with future review letters related to future Plan revisions made in response to prior comments to the reasonable satisfaction of the Township Engineer.
2. A subsequent recordable final plan shall be submitted for internal Township review that addresses all Township review letter requests, further Plan details and clarifications, or revisions based upon the terms of this Resolution.
3. Applicant must comply with any applicable requirements of the Delaware County Conservation District, Pennsylvania Department of Environmental Protection, United States Environmental Protection Agency, or any other necessary outside agency, and obtain any necessary planning modules, approvals, or permits from such agencies, or enter into any required agreements such agencies require, before the Plan is recorded.
4. The conditions of this Resolution must be satisfied, and all fees and costs set forth in this Resolution shall be paid, before the issuance of a building permit for the Project.

5. Prior to recording the Plan, the Applicant shall execute a Land Development and Financial Security Agreement to guarantee the installation of all required public improvements associated with the Project (“Improvements”) on a form drafted by the Township Solicitor. Financial Security shall take the form of a cash escrow held by the Township, an irrevocable standby letter of credit in a form acceptable to the Township Solicitor, or a tri-party agreement in a form acceptable to the Township Solicitor. If Applicant were to post financial security in the form of a bond, the Township Solicitor shall have the unconditional right to review the bond and must approve the conditions and language of the bond. Further, the bond shall be issued by a “AAA” rate surety, or its equivalent, qualified to do business in Pennsylvania, and shall contain language stating that the bond is to be payable upon demand, absolutely, and unconditionally, and if payment is not made, that the bonding company shall be responsible for reasonable attorneys’ fees and costs that are incurred to collect on the bond, plus interest at the annual rate of twelve (12%) percent, for so long as the bond remains unpaid. A bond or letter of credit is required to automatically renew annually until the Improvements detailed on the Plans are completed, any maintenance periods have passed, and the final release is issued by the Township, subject to partial releases being permitted in accordance with Pennsylvania Municipalities Planning Code. To ensure automatic renewal, a bond or letter of credit shall include a 90-day Evergreen Clause in a form acceptable to the Township Solicitor.
6. Financial security shall be posted in the amount of 110% of the total cost of the Improvements. The Applicant agrees that the Improvements shall include, but shall not be limited to, streets, parking areas, striping, drive aisles, curbs, water mains, sanitary sewer pipes, manholes and appurtenances thereto, stormwater facilities, rain gardens and appurtenances, grading, erosion and sediment controls, public lighting, required trees, shrubs, plantings and landscape buffering, monuments, pins, sidewalks, or other public improvements designated by the Township Engineer. For a period not less than 18 months after Township Engineer approval of the Improvements, financial security shall remain posted in the amount of 15% of the total cost of the Improvements that are to be dedicated to the Township, if any.
7. All outstanding Township fees, including review and recording costs and fees, Township Engineering fees, and Township legal fees, and any other professional fees associated with the review and approval of the application and Plan shall be paid in full before the Plan is recorded, in accordance with the Pennsylvania Municipalities Planning Code.
8. Prior to recording the Plan, and in addition to the financial security posted for the Project, Applicant shall deposit with the Township or otherwise establish a reasonable sum of monies with the Township, in an amount to be reasonably determined by the Township Engineer, as to be further described in the Land Development and Financial Security Agreement, for the reimbursement of the Township’s reasonable engineering, inspection, legal, and related administrative costs and expenses related to the further reviews, inspections, and development of the Project, in accordance with the

Pennsylvania Municipalities Planning Code.

9. A note shall be included on the Plan listing any waivers or modifications granted by the Board of Commissioners.

10. The terms and conditions of this Resolution shall run with the land and shall apply to any assignee, transferee, or other successor in interest in the Property or the development of the Project. This Resolution or a memorandum of this Resolution may be recorded against the Property by the Township, or a subdivided portion of the Property, at the Township's sole discretion, to which the then-current landowner of the Property shall be deemed to have consented to such recording. Regardless of whether this Resolution is recorded, the Township shall have the right to enforce any violations of the conditions of this Resolution as a violation of the Township's Subdivision of Land Chapter and/or pursuant to Section 616.1 of the Pennsylvania Municipalities Planning Code.

B. Waivers. The Applicant has requested the following waivers from the SLDO pursuant to the written waiver/modification requests. An indication that a waiver/modification was granted reflects that the Township has determined that the Applicant has sufficiently established that the literal enforcement of the provision waived to be unreasonable, will cause undue hardship, or an alternate standard can provide equal or better results, and that the waiver/modification is not contrary to the public interest or otherwise contrary to the purpose and intent of the Township Code, as demonstrated and explained by appearances of the Applicant before the Board at public meetings and through the waiver request letter(s) submitted. A lack of indication of the decision on the waiver/modification after the Township has executed this Resolution shall be interpreted to mean that the waiver/modification was granted, unless the minutes of the associated Township meeting reflect otherwise:

1. From Section 160-3.B to request a waiver to submit a final plan simultaneously with a preliminary plan. The waiver is hereby:

Granted _____ Denied _____

2. From Section 160-4.E(5)[e](3) to not provide the required plan details within 200 feet of the site. The waiver is hereby:

Granted _____ Denied _____

3. From Section 160-4.E(5)[e](4) to not provide the required plan details within 400 feet of the site. The waiver is hereby:

Granted _____ Denied _____

4. From Section 160-4.E(5)(i) to not provide the required Traffic Study. The waiver is hereby:

Granted _____ Denied _____

5. Partial waiver from Section 160-4.E(5)(g) to not provide the required plan details with exception of 160-4.E(5)(g)[4] and 160-4.E(5)(g)[7]. The waiver is hereby:

Granted _____ Denied _____

6. Partial waiver from Section 160-4.F(2) to not to not provide the required plan details with exception of 160-4.F(2)(a) and 160-4.F(2)(b). The waiver is hereby:

Granted _____ Denied _____

7. From Section 160-5.B.(4)[a] to not install curbing along streets. The waiver is hereby:

Granted _____ Denied _____

8. From Section 160-5.B.(4)[c] to not install sidewalks along streets. The waiver is hereby:

Granted* _____ Denied _____

*A partial waiver is granted subject to the condition that Applicant install a pedestrian path connecting to the existing sidewalk segment on the southeast corner of the Parkview Drive and Darby Road intersection together with the parking space restriping as generally shown on the sketch entitled "Plan at Parkview and Darby Road Intersection Showing Proposed pedestrian connection" dated 11/26/2024, and prepared by Converse Winkler Architecture attached hereto and made a part hereof as Exhibit A (collectively "Path Connection.") The Applicant shall work with the Township Engineer and Township staff to finalize the design for the Path Connection prior to recording the land development plans for the Project. To the extent that the Path Connection triggers the need for stormwater management ("SWM") the Applicant shall include an additional amount for the required SWM in the financial security for the Project. Applicant shall have the option of installing the SWM as part of the Project or providing additional SWM to compensate for the additional impervious area of the Path Connection as part of a future project on the Property.

This Resolution shall bind the Applicant, and the Applicant's successors and assigns. This Resolution does not and shall not authorize the construction of improvements or buildings exceeding those shown on the Plan. Furthermore, this Resolution, and the approvals/waiver and conditions contained herein, shall be rescinded automatically and deemed denied upon Applicant's failure to accept, in writing, all conditions herein imposed within ten (10) days of receipt of this Resolution, such acceptance to be evidenced by the Applicant's signature below.

Resolved and approved this 9th day of December, 2024.

Resolution Number 2423-2024

American Rescue Plan Act Coronavirus Local Fiscal Recovery Fund Continued Restoration along Darby Creek Trail

Whereas, Haverford Township's direct allocation from the Coronavirus State and Local Fiscal Recovery Fund was \$19.8 million;

Whereas, on April 1, 2022, the U.S. Department of Treasury released the Final Rule covering the Coronavirus State and Local Fiscal Recovery Fund, as created and directed by the American Rescue Plan Act authorizing recipients to use funds to invest in public health improvements, economic recovery and development, services to disproportionately affected communities, stormwater and sanitary sewer improvements, and general government services, among other allowable purposes; and,

Whereas, the Board of Commissioners desires to make improvements and financial investments in Township projects and initiatives, as follows, in accordance with the allowable spending structure as described by the U.S. Department of Treasury's Final Rule:

- \$26,900 to be allocated for the continued streambank restoration along the Darby Creek Trail in the vicinity of Jack McDonald Field, including clearing invasive weeds and dead vegetation, control of herbaceous and woody regrowth, and the spreading of a native seed mix throughout the area.

Now, Therefore, be it Resolved, that the Board of Commissioners of Haverford Township hereby approves the use of funds from the Township's American Rescue Plan Fund allocation for the above referenced project and initiative.

Resolution Number 2424-2024

American Rescue Plan Act Coronavirus Local Fiscal Recovery Fund Final Obligation

Whereas, Haverford Township's direct allocation from the Coronavirus State and Local Fiscal Recovery Fund was \$19.8 million;

Whereas, on April 1, 2022, the U.S. Department of Treasury released the Final Rule covering the Coronavirus State and Local Fiscal Recovery Fund, as created and directed by the American Rescue Plan Act authorizing recipients to use funds to invest in public health improvements, economic recovery and development, services to disproportionately affected communities, stormwater and sanitary sewer improvements, and general government services, among other allowable purposes; and,

Whereas, the U.S. Treasury has mandated that all funds be obligated to a specific project by December 31, 2024.

Now, Therefore, be it Resolved, that the Board of Commissioners of Haverford Township hereby approves the final obligation of any remaining unobligated and unpaid funds as of December 31, 2024 for the renovation project at the Haverford Township Free Library for which construction contracts were originally awarded on October 30, 2023 and purchasing contracts for furniture and audio visual equipment were originally awarded on November 12, 2024 at public meetings of the Board of Commissioners.

Township of Haverford

Resolution Number 2431-2024

American Rescue Plan Act Coronavirus Local Fiscal Recovery Fund Recreation Facilities

Whereas, Haverford Township's direct allocation from the Coronavirus State and Local Fiscal Recovery Fund was \$19.8 million;

Whereas, on April 1, 2022, the U.S. Department of Treasury released the Final Rule covering the Coronavirus State and Local Fiscal Recovery Fund, as created and directed by the American Rescue Plan Act authorizing recipients to use funds to invest in public health improvements, economic recovery and development, services to disproportionately affected communities, stormwater and sanitary sewer improvements, and general government services, among other allowable purposes; and,

Whereas, the Board of Commissioners desires to make improvements and financial investments in Township projects and initiatives, as follows, in accordance with the allowable spending structure as described by the U.S. Department of Treasury's Final Rule:

- \$17,660 to be allocated for ADA Traffic Signal Upgrades (audible pedestrian signals) at Darby Road & Manoa Road;

Now, Therefore, be it Resolved, that the Board of Commissioners of Haverford Township hereby approves the use of funds from the Township's American Rescue Plan Fund allocation for the above referenced project and initiative.

Resolved this 9th day of December, 2024.

Township of Haverford

By: C. Lawrence Holmes, Esq., President

Attest: David R. Burman, Township Manager/Secretary

Township of Haverford

Human Resources Department Memorandum

Date: October 17, 2024

To: David R. Burman, Township Manager

From: Lori Chase, Director of Human Resources

Subject: Paychex Flex Upgrade/Discontinuation of Time Advantage/People Guru

The Township has been utilizing multiple vendors to process payroll and track time and attendance. This process is cumbersome and since the two systems do not interface, room for error is great. To date, time and attendance records are uploaded manually into the payroll system which is inefficient and wasteful.

The Township currently runs the Paychex Flex payroll system. By upgrading to the Paychex Flex Enterprise system the Township will be able to drop the time and attendance vendor People Guru (Time Advantage) saving almost \$9k annually. This transition will increase efficiency in payroll processing while at the same time decrease room for error. Time and attendance data will seamlessly upload to the payroll side of the platform reducing work hours needed to process payroll. Additionally, the Paychex Flex Enterprise system will cost less per month and includes the time and attendance tracking.

Payroll systems charge on a per person basis. The snapshot below is based on a headcount of 316, from June 2024. Monthly totals will vary slightly depending upon headcount.

Paychex Flex + People Guru vs. Paychex Flex Enterprise Annual Comparison

	<i>Current Cost</i>		<i>New Pricing w Enterprise</i>	
<i>Paychex Flex</i>	\$50,733.02		\$46,814.04	<i>Paychex Flex Enterprise</i>
<i>People Guru Time and Attendance</i>	\$8,835.36		\$0	<i>Time and Attendance Included in Enterprise</i>

<i>People Guru (Time clocks)</i>	\$9,136.68		\$9,240.00	<i>Enterprise (Time Clocks)</i>
<i>Total</i>	\$68,705.06		\$56,054.04	<i>Total</i>
			\$12,651.02	<i>Annual Net Savings</i>

Township of Haverford

Human Resource Department Memorandum

To: David R. Burman, Township Manager

From: Lori Chase, Director of Human Resources

Subject: Flexible Spending Account Implementation

This memo is to request the approval of a Medical and Dependent Care Flexible Spending Account (FSA) plan. Introducing these FSAs will provide significant benefits for our employees while also offering cost-saving advantages for the Township.

There are several benefits to our employees who participate in the FSA plans. Contributions to FSAs are made with pre-tax dollars, effectively lowering taxable income. Employees can use these funds for eligible medical, dental, and vision expenses, as well as dependent care costs, resulting in substantial tax savings. By implementing FSAs, the Township also benefits from reduced payroll taxes, as contributions made by employees are not subject to Social Security and Medicare taxes. This can lead to considerable savings for the Township.

The plan is fully funded by participating employees. The administrative costs to the Township (\$4 per participant per month) are offset by the substantial savings in payroll taxes.

Participation is voluntary and open to all full-time employees, regardless of enrollment in our medical benefits. Offering FSAs can improve employee satisfaction by providing a valuable benefit that helps employees manage their healthcare and dependent care expenses more effectively. Offering FSA plans is an added benefit to attract and retain top talent.

Thank you for considering this valuable offering for our employees.

BENEFIT RESOURCE MASTER SERVICES AGREEMENT

This Master Services Agreement (“Agreement”) is entered into by Benefit Resource, LLC on behalf of itself and certain affiliates (collectively, “BRI”), and Haverford Township, as plan sponsor of certain group benefit plans (“Employer”), effective January 1, 2025 (the “Effective Date”).

WHEREAS, BRI is a provider of benefit plan administration services; and

WHEREAS, Employer sponsors one or more group benefit plans (each a “Plan” and collectively, “Plans”); and

WHEREAS, Employer seeks to engage BRI to provide certain benefit plan administration services for Plans sponsored by Employer.

NOW, THEREFORE, as of the Effective Date and in consideration of the terms and conditions contained herein, BRI and Employer agree as follows:

1. Services.

- a. Selection of Services. Employer may select one or more services (each a “Service” and collectively, the “Services”) through the completion of an addendum (each an “Addendum” and collectively, “Addenda”). As of the Effective Date, BRI shall provide the Services selected by Employer in a manner consistent with this Agreement, and Employer hereby authorizes BRI to provide the Services in such a manner. Each Addendum attached to this Agreement on the Effective Date, or attached at any date thereof, shall be incorporated into and become a part of this Agreement and subject to all of the terms and conditions hereunder. If there is any discrepancy between this Agreement and an Addendum, the Addendum shall control.
- b. Standard of Care. All Services hereunder shall (i) be performed by experienced, qualified personnel, (ii) reflect and adhere to generally accepted and reasonable industry standards and (iii) in each instance, be performed with the care, skill, prudence and diligence under the circumstances then prevailing as would a prudent person, acting in a like capacity and familiar with such matters.
- c. No Warranty. Except as outlined in this Agreement, BRI makes no representation and makes no warranty of any kind, either express or implied, with respect to the Services performed under this Agreement.
- d. MMSEA Reporting. In the event BRI is the “Registered Reporting Entity” for purposes of required Medicare Secondary Payer reporting under Section 111 of the Medicare, Medicaid, and SCHIP Extension Act of 2007 (“MMSEA”), BRI shall not be liable in the event Employer has not provided all required information, or an individual refuses to provide a Social Security Number (“SSN”). In such event where an individual refuses to provide an SSN, the Employer shall have the participant sign a form that allows individuals to explain their refusal to provide requested information and shall return the signed form to BRI for its files. In the event the participant refuses to sign the form, BRI may deny enrollment.

2. Fees and Payment.

- a. Employer’s Fee for Services. Each Addendum will specify the fee for a particular Service. Employer agrees to pay the fee specified in an Addendum. After the initial term of the Agreement, BRI may change any fees, as long as it provides Employer with advance electronic or written notice of the fee change at least sixty (60) days before such fee change becomes effective. Such notice shall be deemed to amend the fee portion of the applicable Addendum.
- b. Indirect Fees. In addition to the fees set forth in Addenda, BRI may, in connection with the provision of Services, receive interest, investment income and/or similar payments from third parties. Employer acknowledges that BRI will retain such payments as additional consideration for the Services BRI provides hereunder.

- c. Payment. BRI shall invoice Employer monthly, in arrears, for all Services rendered during the prior month. Full payment is due no later than thirty (30) days after the invoice date. Payments not received in accordance with this section shall bear a late fee of two percent (2%) per month (or if less, the highest rate allowed by applicable law) from the due date until paid in full by Employer. If discrepancies are found, Employer shall notify BRI within a reasonable period of time, not to exceed sixty (60) days. Further, Employer is responsible for and shall reimburse BRI for all expenses BRI incurs to collect fees that are not timely paid (including, without limitation, attorney fees, court costs and collection fees). If permitted by Employer's Plan(s) and applicable law, any amounts forfeited under such Plan(s) in connection with the Services hereunder may be retained by BRI to offset any past due invoices or other expenses owed by Employer.
- d. Third-Party Payment. If Employer arranges for a third party to make payments on its behalf (for example, a broker of record), Employer acknowledges that it remains responsible for any payments due under this Agreement but not made by such third party.

3. Employer Responsibilities and Representations.

- a. Plan Compliance. Employer is solely responsible for a Plan's design, documentary, operational, and administrative compliance with all applicable laws.
- b. Plan Administration. Employer is solely responsible for a Plan's administration, except to the extent expressly delegated to BRI in this Agreement. BRI is not the "administrator" of any Plan, as defined by the Employee Retirement Income and Security Act ("ERISA"), if applicable.
- c. Plan Interpretation. Employer is solely responsible for making any determinations related to eligibility, claims, or other inquiries under the Plans, unless expressly stated in this Agreement. Employer has the sole responsibility to construe the terms of the Plans and to interpret any ambiguous Plan language.
- d. Plan Funding. Employer will provide BRI approval to withdraw applicable funds from Employer's bank account in order to fund the Plan(s). Employer is solely responsible for funding any benefits provided under a Plan and any other liability related to a Plan. Employer acknowledges that BRI is neither funding, insuring, nor underwriting any benefits or other liability under or related to a Plan. If required to perform the Services hereunder, Employer shall enter into an agreement authorizing BRI to debit Employer's account to fund benefits under a Plan. Employer agrees to pay BRI the entire amount owed for Participant spending, in any Plan, regardless of whether Employer collects sufficient payroll deductions. Additionally, Employer may be required to provide BRI a "Prefund Amount" calculated in accordance with BRI's standard operating procedures based on expected Plan usage and communicated to the Employer in writing (with email sufficing). Once communicated to Employer, such Prefund Amount will be collected within two (2) business days. If the balance of funds held on behalf of the Employer falls below the Prefund Amount, Employer agrees to make an additional contribution equal to the difference between the Prefund Amount and the balance within two (2) business days of being informed in writing (with email sufficing) of such shortfall. Employer shall elect to fund the Plan in accordance with one of the options set forth below:
 - i. If Employer elects to fund based on claims activity, BRI shall withdraw from Employer's bank account an amount as necessary to satisfy payment of qualified expenses under the Plan in a frequency determined by BRI and communicated to Employer.
 - ii. If Employer elects to fund based on payroll deductions, BRI will withdraw from Employer's bank account within two (2) days of each pay date, the amount of such payroll deductions as established for the Plan(s).
- e. Fiduciary Status. Employer represents that it is a "fiduciary" with respect to any of the Plans governed by ERISA, as such term is defined in ERISA. Employer acknowledges that BRI is not a "fiduciary," as such term is defined in ERISA or for purposes of other applicable laws, with respect to any Plan, unless expressly stated in this Agreement.
- f. Reliance. Employer shall provide any and all information reasonably deemed necessary by BRI for the performance of Services hereunder. Such information shall be complete, accurate, and supplied

in a timely manner. Employer acknowledges that BRI will rely on the information provided by Employer, and that BRI has no duty to inquire whether such information is complete and/or accurate. Employer is responsible for any Service delays and/or deficiencies attributable to Employer's failure to provide complete, accurate and/or timely information.

- g. Escheatment. Employer shall be solely responsible for compliance with all escheatment obligations.

4. Confidentiality, Data Security and Retention.

- a. Confidential Information. "Confidential Information" means any information (without regard to the medium on which such information may be recorded, whether written, visual, audio, graphic, electronic or otherwise) concerning or relating to the property, business, customers, systems, personnel and/or affairs of Employer. Unless such Confidential Information was previously known to either party free of any obligation to keep it confidential, or is subsequently made public by any third party having a legal right to make such disclosure, the parties agree to hold Confidential Information in confidence and also agree that Confidential Information shall be used only for the purposes provided for in this Agreement. For the avoidance of doubt, Confidential Information shall not include Protected Health Information ("PHI"), as the parties intend to enter into a business associate agreement to address the confidential treatment of PHI. The business associate agreement is attached as an Addendum to this Agreement.
- b. Compliance with Privacy Laws. The parties agree to abide by applicable laws that govern the privacy and security of any information exchanged in connection with this Agreement.
- c. Permitted Disclosure of Confidential Information. Each party acknowledges and agrees that the other party may be required to disclose Confidential Information to governmental agencies, courts or similar authorities pursuant to applicable law, a subpoena, a court order or other legal process, and that such disclosure shall not be considered to be a violation of this Agreement, provided the party receiving the disclosure request shall endeavor to provide reasonable electronic, telephonic or written notice to the other party prior to disclosure so to allow the other party sufficient opportunity to take action necessary to protect its Confidential Information. In addition, Employer may request BRI to share Employer's Confidential Information with another vendor, in which case, BRI shall comply but may condition compliance on Employer, BRI and/or vendor, as appropriate, entering into an information sharing and/or confidentiality agreement.
- d. Data Security. Each party agrees that it shall use the same degree of care to safeguard the Confidential Information as it utilizes to safeguard its own Confidential Information.
- e. Retention. BRI shall retain copies of information (including Confidential Information) provided by Employer in connection with this Agreement for a period of seven (7) years from the date such information is provided, or if sooner, until the date this Agreement terminates, subject to applicable laws. However, BRI may retain a copy of all information provided by Employer following termination of this Agreement, in which case, retention and disclosure thereof will comply with this Section 4.

5. Term and Termination.

- a. General. The initial term of this agreement shall begin on the Effective Date and shall continue for a period of 24 months. Following the initial term, this Agreement shall automatically renew for a period of twelve (12) months. "Term" shall refer to the initial term plus any applicable renewal period(s). Notwithstanding the foregoing, if a specific benefit provided under this Agreement through an Addenda has a different term of services as a result of an initial term or renewal term as agreed to by the parties, such longer term shall govern. Further, in no event shall this Agreement terminate prior to the expiration date of any benefit provided through an Addenda to this Agreement as attached hereto.
- b. Termination Without Cause. Either party may terminate this Agreement at any point during the Term if such party provides written notice to the other party at least sixty (60) days in advance of the proposed termination date. Employer shall be responsible to pay all amounts due and owing upon termination. In the event this Agreement is terminated by the Employer during the initial term, Employer shall pay BRI an early termination fee equal to 25 percent (25%) of the average monthly fees (determined below) multiplied by the number of full and partial months remaining in the initial term (not to exceed 12 months). The average monthly fees will be determined using the twelve (12) months

immediately preceding the termination date, or if shorter, the number of months between the Effective Date and the termination date.

- c. Termination for Default. If a party is in default under any provision of this Agreement, the non-defaulting party may provide written notice to terminate this Agreement to the defaulting party. If the defaulting party fails to cure the default by the date specified in the notice (such date shall be no earlier than thirty (30) days from the date the notice is provided), the non-defaulting party may terminate this Agreement upon written notice to the defaulting party.
- d. Automatic Termination. Notwithstanding the foregoing, this Agreement will automatically terminate at any point during the Term if (i) a change in applicable law renders the Agreement prohibited or void, or (ii) either party is adjudicated bankrupt, becomes insolvent, has a receiver of its assets or property appointed, makes a general assignment for the benefit of creditors, or institutes or causes to be instituted any procedure for reorganization or rearrangement of its affairs.
- e. Run-Out Period. BRI will cease providing services as of the Agreement's termination date. However, the parties may agree to extend the Services beyond the termination of this Agreement, in which case, this Agreement shall continue to apply during any "run-out period." BRI may require pre-payment of any fees that would be due for Services provided during the run-out period.
- f. Post-Termination. Following termination of this Agreement (or any run-out period, as applicable), BRI will, upon request from Employer, provide Employer or its vendor copies of Employer's data and records related to the Services provided hereunder, in a format designated by BRI, subject to the requirements of Section 4.

6. Dispute Resolution and Arbitration.

- a. Good Faith Consultation. The parties shall consult in good faith with each other to resolve any disputes arising under this Agreement for at least thirty (30) days after one party has given notice of the dispute to the other party.
- b. Binding Arbitration. Any dispute arising under or in relation to this Agreement that has not been resolved pursuant to the above paragraph shall be resolved by binding arbitration described below. The arbitration hearing shall be conducted in the County of Monroe (NY), or an alternative location if mutually agreed by the parties.
- c. Arbitration Process. Unless otherwise expressly agreed to by the parties, the arbitration shall be conducted in accordance with the Judicial and Mediation Services ("JAMS") procedures by one arbitrator who is licensed in good standing to practice law and has at least seven (7) years of experience in health care contracts. The arbitrator is required to follow applicable state or federal law. The arbitrator may interpret this Agreement, but will not have any power to change, modify or refuse to enforce any of its terms, to make a material error of law, nor will the arbitrator have the authority to make any award that would not be available in a court of law. At the conclusion of the hearing, the arbitrator shall render a tentative written award that explains the arbitrator's findings and conclusions. By the tenth (10th) business day after the issuance of the tentative award (the "Last Request Day"), the parties may submit written requests for modifications of the tentative award, and an oral hearing on any such requests shall be conducted within five (5) business days after the Last Request Day. Within ten (10) business days after the last day of the oral hearing, the arbitrator shall render the final award, which shall be final and binding. Judgment may be entered upon the final award in accordance with applicable law in any court having jurisdiction thereof.
- d. Venue. Any action arising under or in relation to this Agreement, including, without limitation, any petition to confirm, correct, vacate or enforce the arbitrator's award, shall be brought in the Supreme Court of the County of Monroe (NY) or an alternative venue if mutually agreed by the parties.

7. Indemnity and Limitation of Liability.

- a. Indemnity. Each party will defend, indemnify and hold harmless the other party and its respective officers, directors, agents, employees, representatives, successors and assigns (collectively, the "Indemnified Parties") from and against any and all third party liability, damages, losses, expenses (including reasonable attorneys' fees), taxes and/or penalties incurred by an Indemnified Party in

connection with this Agreement and the provision of Services hereunder, except to the extent solely caused by the other Party's gross negligence or willful misconduct.

- b. Damages. No party shall be liable to the other for consequential, special, punitive, or incidental damages arising out of this Agreement or the Services provided hereunder.
- c. Limitation. In no event shall any liability of BRI arising out of this Agreement or the Services provided hereunder exceed an amount equal to the average monthly fees (determined under Section 5(b)) multiplied by twenty-four (24).

8. Audit.

- a. General. During the Term of this Agreement, and at any time within six (6) months of the date this Agreement terminates, Employer may audit BRI's records related to the Services to determine whether BRI is complying or complied, with this Agreement. Employer may audit BRI once per 12-month period.
- b. Notice, Timing and Parameters. Employer must provide written notice of an audit no later than sixty (60) days prior to the proposed date of the audit. The actual date of the audit shall be negotiated by BRI and Employer. Such notice shall describe the proposed scope of the audit, sample size, sampling method, duration, location, and other audit specifications, all of which are subject to agreement by BRI.
- c. Auditor. Employer may designate a third-party to perform an audit under this Section 8. However, any third-party auditor must be (i) mutually agreed to by BRI (with respect to any audits involving the HSA benefit), (ii) qualified (as evidenced by professional affiliations and standards) to perform an audit, and (iii) willing to enter into a non-disclosure and confidentiality agreement with BRI and/or Employer.
- d. Report. The auditor must present all draft findings to BRI before any audit report is issued to the Employer. If BRI disagrees with any portion of the draft findings, BRI will notify the auditor within ten (10) business days, at which time, BRI and the auditor shall enter into good faith discussions to resolve the disagreement.
- e. Expenses. All expenses related to an audit shall be borne by the Employer.

9. Miscellaneous.

- a. Amendment. This Agreement may be modified only in writing signed by all parties to the Agreement.
- b. Non-Waiver. The failure or delay by either party to enforce the terms of this Agreement shall not be deemed a waiver of such terms.
- c. Assignment and Subcontracting. This Agreement may not be assigned by either party without the prior written consent of the other party, except that BRI shall have the right to assign its rights to payment hereunder. BRI may subcontract the Services, such contracting of Services shall not diminish or limit BRI's obligations hereunder, and will not create a direct contractual relationship between Employer and BRI's subcontractor.
- d. Force Majeure. Neither party shall have any liability for delayed or deficient performance to the extent that such delay or failure is due to causes beyond the party's reasonable control.
- e. Notices. All notices permitted or required under this Agreement shall be in writing (unless electronic notice is specified), delivered by hand or mailed by certified United States mail, return receipt requested, or by a nationally recognized overnight courier, addressed as follows:

To Employer:

Haverford Township

,
Email (for electronic notices only):

To BRI:

Attention: CFO
Benefit Resource, LLC
245 Kenneth Drive
Rochester NY 14623-4277
Email (for electronic notices only): accounting@inspirafinancial.com

All notices shall be effective upon receipt or upon attempted delivery where delivery is refused, or mail is unclaimed.

- f. Governing Law. This Agreement shall be governed and interpreted under the laws of the state of New York without giving effect to any choice of law or conflicting provision or rule (whether of the state of New York or any other jurisdiction) that would cause the laws of any jurisdiction other than the state of New York to be applied.
- g. Interpretation and Entire Understanding. This Agreement, along with its Addenda, constitutes the entire Agreement between the parties hereto and supersedes all prior and contemporaneous arrangements, understandings, negotiations and discussions of the parties with respect to the Services, whether written or oral, and there are no warranties, representations, or other agreements between the parties in connection with the Services except as specifically set forth herein. The parties hereby acknowledge and agree that (i) the rule of construction providing that any ambiguities are resolved against the drafting party will not apply in interpreting this Agreement, and (ii) the Agreement will be construed fairly as to all parties hereto and not in favor of or against a party, regardless of which party was generally responsible for the preparation of this Agreement.
- h. Relationship of Parties. The parties agree that in performing their respective obligations under this Agreement, they are in the position of independent contractors. This Agreement does not create, and is not intended to create, any partnership, joint venture or similar relationship.
- i. Severability. If any provision of this Agreement is found to be unenforceable, such finding shall not affect the remaining provisions of this Agreement, each of which shall be enforced as if the unenforceable provision has been removed.
- j. Counterparts. This Agreement may be executed, delivered and transmitted as separate counterparts, each of which shall be considered an original and all of which together constitute this Agreement.

This Agreement is accepted and agreed to by the parties as of the Effective Date.

BENEFIT RESOURCE MASTER SERVICE AGREEMENT

FLEXIBLE SPENDING ACCOUNT ADDENDUM

This Addendum relates to the provision of Flexible Spending Account (“FSA”) Services. Any capitalized term not defined in this Addendum shall be as defined in the Agreement.

This Addendum is made a part of the Agreement as of:

January 1, 2025

The term of this Addendum shall be the later of: (i) the end of the current FSA Plan Year, (ii) the term of the Master Services Agreement, or (iii) the term of any current renewal mutually agreed to by the parties.

1. FSA Services and Fees. BRI shall provide the following Services related to Employer’s FSA, subject to payment of the specified fee(s):

a. Installation of FSA – billed once for all pre-tax plans Fee: \$0.00

- Coordinate FSA design with Employer.
- Initial plan documentation of FSA (as requested by Employer).
- Provision of FSA enrollment information, forms and announcement documents.
- Scheduled online web access sessions to conduct group employee meetings and roll out implementation of FSA to employees.
- Prefunding equal to 4% of total Plan Year elections must be available the first business day of the month prior to Plan Year begin date, if the Plan Year elections exceed \$25,000.

b. On-going Support of FSA Fee: \$4.00

This is a standalone rate for employees who are enrolled FSA only.

Monthly Minimum (only applies if the total FSA monthly billing is less than this amount) Fee: \$125.00

- General FSA account administration.
- Claims processing through BRI’s website, mobile app, or claim form (with reimbursement of claims through direct deposit, paper check).
 - *In the event of payment in error to a plan participant, Employer acknowledges that BRI has the right to recoup payment and agrees to assist BRI in such efforts.*
- Detailed explanation of benefit statements (health FSA only).
- Provision of a Beniversal® Prepaid MasterCard® which allows participants to access FSA funds at point-of-sale from qualified merchants.
- Employer and Participant access to BRIWEB which contains FSA information, reports, forms, and account details.
 - **(Note:** it is the Employer’s responsibility to leverage these reports & ensure terminated participants are reported to BRI in a timely manner. We bill for terminated participants through the end of the current plan year in order to process eligible claims up to their date of ineligibility).
- Participant opt-in account alerts via email or text message, including monthly balance reminders and transaction alerts (standard text message rates apply).

- Claims substantiation.
- Compliance support (e.g., FSA document amendments, Employer reference manual, Internal Revenue Code nondiscrimination testing). Fee: \$395.00

2. Additional Services and Fees. If elected by the Employer below (or at any time during the term of the agreement), BRI shall provide the following Services related to Employer’s FSA, subject to payment of the specified fee(s):

- Third Party File Interface (for new enrollments, changes, terminations, and payroll deductions. Included for clients over 250 ppts). Fee: \$0.00
- Customization of reporting (ad hoc reports may require additional approval) or other FSA materials. Fee: \$250.00/hour (minimum 1 hour)
- Form 5500 Preparation (for applicable plans) Fee: \$275.00/year
- Schedule A Preparation Fee: \$25.00/schedule
- Non-standard documentation request for substantiation (charged to participant’s FSA account unless otherwise arranged between BRI and Employer). Fee: \$1.00/document
- Takeover (balances only) of Run Out Period from prior TPA Fee: \$500.00
Applicable if requested after implementation has been completed.

3. Cardholder Fees. **The following fees will be charged to the Employer or if applicable, the Beniversal® Prepaid MasterCard® cardholder.**

- a. Additional or replacement card (e.g., in the event card is lost, stolen, damaged, or there is a participant name change - billed to plan participant). Fee: Included
- b. Expedited Card Fee (billed to plan participant) Fee: \$30.00/card

This Addendum and the terms set forth herein shall be effective as of the date entered above.

Benefit Resource Business Associate Agreement

This Business Associate Agreement (the "Agreement") is entered into by and between Benefit Resource, LLC. and its wholly owned subsidiaries (collectively referred to as "Business Associate") and Haverford Township on behalf of its group health plan(s) (collectively, the "Covered Entity").

RECITALS:

WHEREAS, the Business Associate provides third-party administration services (the "Service Arrangement") pursuant to which the Covered Entity may create, access, or otherwise come in contact with Protected Health Information, as clarified by the Genetic Information Act of 2008 and applicable regulations ("PHI"), and/or the Covered Entity may disclose PHI to Business Associate, in order to enable Business Associate to perform one or more functions for the Covered Entity related to Treatment, Payment, or Health Care Operations as contemplated by the Service Arrangement; and

WHEREAS, the parties desire to comply with the Health Insurance Portability and Accountability Act of 1996 ("HIPAA") and the Final Rule for Standards for Privacy of Individually Identifiable Health Information adopted by the United States Department of Health and Human Services and codified at 45 C.F.R. part 160 and part 164, subparts A & E (the "Privacy Rule"), the HIPAA Security Rule (the "Security Rule"), codified at 45 C.F.R. Part 164 Subpart C, and Subtitle D of the Health Information Technology for Economic and Clinical Health Act ("HITECH"), including C.F.R. Sections 164.308, 164.310, 164.312, 164.316, and 164.402.

NOW THEREFORE, the parties to this Agreement hereby agree as follows:

1. Definitions

Terms used, but not otherwise defined, in this Agreement shall have the same meaning as those terms in the Privacy Rule, the Security Rule, and HITECH, including 45 C.F.R. §§ 160.103, 164.103, 164.304, 164.402, 164.501 and 164.502.

2. Obligations and Activities of Business Associate

- a. Business Associate agrees to not use or further disclose PHI other than as permitted or required by this Agreement, as Required by Law or as permitted by law, provided the use or disclosure would also be permissible by law if made by the Covered Entity.
- b. Business Associate agrees to use appropriate safeguards to prevent use or disclosure of PHI other than as provided for in this Agreement. Business Associate agrees to implement Administrative Safeguards, Physical Safeguards and Technical Safeguards ("Safeguards") that reasonably and appropriately protect the confidentiality, integrity and availability of PHI as required by the Security Rule, including those safeguards required pursuant to 45 C.F.R. §§ 164.308, 164.310, 164.312, 164.314 and 164.316, in the same manner that those requirements apply to the Covered Entity pursuant to 45 C.F.R. § 164.504.
- c. Business Associate agrees to mitigate, to the extent practicable, any harmful effect that is known to Business Associate of a use or disclosure of PHI by Business Associate in violation of the requirements of this Agreement.
- d. Business Associate agrees to report, as soon as practicable, to the Covered Entity any use or disclosure of PHI not provided for by this Agreement, including any Breach of Unsecured PHI as required by 45 C.F.R. § 164.410, and any Security Incident of which it becomes aware, as set forth in Section 2(k). Notwithstanding the foregoing, the parties hereby agree that this Agreement shall be sufficient notification of unsuccessful Security Incidents (one or more unwanted or unexpected events that could compromise the security of information or weaken or impair business operations), including but not limited to attempted penetration of Business Associate's firewalls by viruses, hacks, pings, and other unsuccessful attacks on Business Associate's security and data infrastructure.
- e. Business Associate agrees to ensure that any agent, including a subcontractor or vendor, to whom it provides PHI received from or created by Business Associate on behalf of the Covered Entity, to the same restrictions and conditions that apply through this Agreement to Business Associate with respect to such information through a contractual arrangement that complies with 45 C.F.R. § 164.314. Upon request, Business Associate shall provide Covered Entity with the name and contact information for any such agent, including a subcontractor or vendor.
- f. Business Associate agrees to provide paper or electronic access, at the request of the Covered Entity and in the time and manner designated by the Covered Entity, to PHI in a Designated Record Set, to the Covered Entity or, as directed by the Covered Entity, to an Individual in order to meet the requirements under 45 C.F.R. § 164.524. If an electronic copy of the information is requested, Business Associate must provide the Covered Entity or Individual with the information requested in the electronic form and format requested if it is readily producible in such form and format; or, if not, in paper form and format.

g. Business Associate agrees to make any amendment(s) to PHI in a Designated Record Set that the Covered Entity directs or agrees to pursuant to 45 C.F.R. §164.526 at the request of the Covered Entity or an Individual, and in the time and manner designated by the Covered Entity.

h. Business Associate agrees to make its internal practices, books, and records relating to the use and disclosure of PHI received from, or created or received by Business Associate on behalf of the Covered Entity, available to the Secretary, in a time and manner designated by the Secretary, for the purposes of the Secretary determining the Covered Entity's compliance with the Privacy Rule and Security Rule.

i. Business Associate agrees to document disclosures of PHI and the information related to the disclosures that would be required for the Covered Entity to respond to a request by an Individual for an accounting of disclosures of PHI in accordance with 45 C.F.R. §164.528.

j. Business Associate agrees to provide to the Covered Entity or an Individual, in a time and manner designated by the Covered Entity, information collected in accordance with this Agreement, to permit the Covered Entity to respond to a request by an individual for an accounting of disclosures for PHI in accordance with 45 C.F.R. §164.528.

k. If Business Associate accesses, maintains, retains, modifies, records, stores, destroys, or otherwise holds, uses, or discloses Unsecured Protected Health Information (as defined in 45 C.F.R. § 164.402), it shall, as soon as practicable following the discovery of a Breach of such information, promptly notify the Covered Entity of the Breach. The notice shall include: (a) a brief description of what happened, including the date of the Breach and the date of the discovery of the Breach, if known; (b) a description of the types of Unsecured Protected Health Information that were involved in the Breach (such as whether full name, social security number, date of birth, home address, account number, diagnosis, disability code, or other types of information were involved); (c) to the extent known by the Business Associate, any steps individuals should take to protect themselves from potential harm resulting from the Breach; (d) a brief description of what the Business Associate is doing to investigate the Breach, to mitigate harm to individuals, and to protect against any further Breaches; and (e) contact procedures for individuals to ask questions or learn additional information about the Breach. In an effort to provide notice as expeditiously as possible, Business Associate may elect to provide notice telephonically prior to issuing a written notice. Business Associate shall reasonably cooperate with the Covered Entity with respect to investigation a Breach and satisfying the Covered Entity's Breach-related obligations.

l. Business Associate agrees that it will not receive remuneration directly or indirectly in exchange for PHI without authorization unless an exception under 13405(d) of the HITECH Act applies.

m. Business Associate agrees that it will not receive remuneration for certain communications that fall within the exceptions to the definition of Marketing under 45 C.F.R. § 164.501 unless permitted by the HITECH Act.

n. Business Associate agrees that it will not use or disclose genetic information for underwriting purposes, as that term is defined in 45 C.F.R. § 164.502.

3. Permitted Uses and Disclosures by Business Associate

a. Except as otherwise limited in this Agreement, Business Associate may only use or disclose PHI to perform functions, activities, or services for, or on behalf of, the Covered Entity as specified in the Service Arrangement, provided that the use or disclosure would not violate the Privacy Rule if done by the Covered Entity or the minimum necessary policies and procedures of the Covered Entity required by 45 C.F.R. §164.514(d). Further, Business Associate will only disclose PHI to its representatives who need to know such information for purposes thereof and who are advised of their obligations to (i) keep such information confidential in accordance herewith, and (ii) not use any such information for any purpose except to enable Business Associate to perform under the Service Arrangement.

b. Except as otherwise limited in this Agreement, Business Associate or any of its representatives may use PHI for the proper management and administration of the Business Associate or to carry out the legal responsibilities of the Business Associate. In addition, Business Associate may disclose PHI for the proper management and administration of the Business Associate or to carry out the legal responsibilities of the Business Associate, provided such disclosures are Required By Law, or if Business Associate obtains reasonable assurances from the person to whom PHI will be disclosed that it will remain confidential and used or further disclosed only as Required By Law or the purpose for which it was disclosed to the person (and further, that the person will notify Business Associate of any Breach).

c. Except as otherwise limited in this Agreement, Business Associate may use PHI to provide Data Aggregation services to the Covered Entity as permitted by 45 C.F.R. §164.504(e)(2)(i)(B).

d. Business Associate may use PHI to report violations of law to appropriate Federal and State authorities, consistent with 45 C.F.R. §164.502(j)(1).

4. Obligations of the Covered Entity

a. The Covered Entity shall notify Business Associate of any limitation(s) in its notice of privacy practices in accordance with 45 C.F.R. § 164.520, to the extent that the limitation may affect Business Associate's use or disclosure of PHI.

b. The Covered Entity shall notify Business Associate of any changes in, or revocation of, permission by an Individual to use or disclose PHI to the extent that the changes may affect Business Associate's use or disclosure of PHI.

c. The Covered Entity shall notify Business Associate of any restriction to the use or disclosure of PHI that the Covered Entity has agreed to in accordance with 45 C.F.R. § 164.522, to the extent that the restriction may affect Business Associate's use or disclosure of PHI. Otherwise, Covered Entity agrees that it will not furnish or impose by

arrangements with third parties or other covered entities or business associates special limits or restrictions to the uses and disclosures of its PHI that may impact in any manner the use and disclosure of PHI by Business Associate.

5. Permissible Requests by the Covered Entity

The Covered Entity shall not request Business Associate to use or disclose PHI in any manner that would not be permissible under the Privacy Rule if done by the Covered Entity.

6. Compliance with Electronic Transactions Rule

If Business Associate conducts in whole or part Electronic Transactions on behalf of the Covered Entity for which the Department of Health and Human Services has established standards, Business Associate will comply, and will require any subcontractor, vendor, or agent it involves with the conduct of Electronic Transactions to comply, with each applicable requirement of the Electronic Transactions Rule at 45 C.F.R. Part 162. Business Associate shall also comply with the National Provider Identifier requirements, if and to the extent applicable.

7. Term and Termination

a. The term of this Agreement shall begin as of the effective date of the Service Arrangement and shall terminate when all of the PHI provided by the Covered Entity to Business Associate, or created or received by Business Associate on behalf of the Covered Entity, is destroyed or returned to the Covered Entity, or, if it is infeasible to return or destroy PHI, protections are extended to the information, in accordance with the termination provisions of this Section.

b. Upon either party's knowledge of a material breach by the other party, the non-breaching party shall either:

i. Provide an opportunity for the breaching party to cure the breach or end the violation and terminate this Agreement and the Service Agreement if the breaching party does not cure the breach or end the violation within a reasonable time specified by the non-breaching party, or

ii. Immediately terminate this Agreement and the Service Arrangement if the breaching party has breached a material term of this Agreement and cure is not possible.

c. Except as provided in paragraph (d) of this Section, upon any termination or expiration of this Agreement, Business Associate shall return or destroy all PHI received from the Covered Entity, or created or received by Business Associate on behalf of the Covered Entity. This provision shall apply to PHI that is in the possession of subcontractors, vendors, or agents of Business Associate. Business Associate shall retain no copies of the PHI. Business Associate shall ensure that its agents, subcontractors or vendors return or destroy any of Covered Entity's PHI received from Business Associate. Notwithstanding the foregoing, Business Associate may retain PHI to the extent required by law, which information shall be held on a confidential basis pursuant to the terms hereof. Upon Covered Entity's request, Business Associate shall promptly certify in writing as to its compliance with this paragraph.

d. In the event that Business Associate determines that returning or destroying the PHI is infeasible, Business Associate shall provide to the Covered Entity notification of the conditions that make return or destruction infeasible. In such case, Business Associate shall extend the protections of this Agreement to the PHI and limit further uses and disclosures of the PHI to those purposes that make the return or destruction infeasible, for so long as Business Associate maintains the PHI.

8. Miscellaneous

a. A reference in this Agreement to a section in the Privacy Rule or Security Rule means the section as in effect or as amended.

b. The Parties agree to take actions that are necessary to amend this Agreement from time to time as is necessary for the Covered Entity to comply with the requirements of HIPAA, the Privacy and Security Rules and HITECH.

c. The respective rights and obligations of Business Associate under Section 7 (c) and (d) of this Agreement shall survive the termination of this Agreement.

d. Any ambiguity in this Agreement shall be resolved to permit the Covered Entity to comply with HIPAA and HITECH.

e. Nothing express or implied in this Agreement is intended to confer, nor shall anything herein confer upon any person other than the Covered Entity, Business Associate and their respective successors and assigns, any rights, remedies, obligations or liabilities whatsoever.

f. Modification of the terms of this Agreement shall not be effective or binding upon the parties unless and until the modification is committed to writing and executed by the parties hereto.

g. This Agreement shall be binding upon the parties hereto, and their respective legal representatives, trustees, receivers, successors and permitted assigns.

h. Should any provision of this Agreement be found unenforceable, it shall be deemed severable and the balance of the Agreement shall continue in full force and effect as if the unenforceable provision had never been made a part hereof.

i. This Agreement and the rights and obligations of the parties hereunder shall in all respects be governed by, and construed in accordance with, the laws of the State of New York, including all matters of construction, validity and performance.

j. All notices and communications required or permitted to be given hereunder shall be sent by certified or regular mail, addressed to the other party at its respective address as shown on the signature page, or at another address that the party shall from time to time designate in writing to the other party, and shall be effective from the date

of mailing.

This Agreement, including the portions that are incorporated by reference herein, constitutes the entire agreement by, between and among the parties, and the parties acknowledge by their signature hereto that they do not rely upon any representations or undertakings by any person or party, past or future, not expressly set forth in writing herein.

IN WITNESS WHEREOF, the undersigned have executed this Agreement as of the date first set forth above.

RE: Haverford Township Free Library Renovation & Addition Project- Construction Change Orders

Mr. Burman,

Below is a summary of change orders we have reviewed and are recommending for approval by the Board of Commissioners. There is an explanation of each change as well as the detailed back-up for the costs.

For **Rycon Construction** contract these change order requests total a credit of **(\$17,204.22) (Seventeen thousand two hundred four dollars & twenty-two cents)** and will be part of a change order to their contract.

For **Dolan Mechanical (HVAC)** contract these change order requests total an add of **\$17,204.22 (Seventeen thousand two hundred four dollars & twenty-two cents)** and will be part of a change order to their contract.

The remaining project contingency is currently at \$192,433.00.

Please let us know if you have any questions or comments.

Sincerely,

Kenneth C. Matthews

Kenneth C. Matthews
C.B. Development Services, Inc.

CC: Aimee Cuthbertson, Sukrit Goswami

Rycon Construction Change Request for a credit of (\$8,666.17).

The cost included is a back charge to Rycon for Dolan (Mechanical Contractor) to schedule an additional crane pick to lift and install the chiller. Dolan only needed one crane day to install all of the roof top equipment which was done in October in order for their equipment installation to stay on schedule. However, the chiller steel was installed incorrectly by Rycon so the chiller could not be set at that time which is why this cost is being deducted from Rycon's contract on the roof. The cost submitted and attached for reference is fair and reasonable.

Rycon Construction Change Request for a credit of (\$8,538.05).

The cost included is a back charge to Rycon for having to pay Dolan (Mechanical Contractor) a change order (see below) to remove and reinstall ductwork in the lower level due to Rycon's failure to coordinate the steel around the ductwork. The cost submitted and attached for reference is fair and reasonable.

Dolan Mechanical (HVAC) Construction Change Request #6 for an add of \$8,666.17.

The cost included is for an additional crane pick that is now needed to lift the chiller to the roof. Reference the credit change order above to Rycon for this amount so there is no cost to the Township for this work. The cost submitted and attached for reference are fair and reasonable.

Dolan Mechanical (HVAC) Construction Change Request #7 for an add of \$8,538.05.

The cost included is for work associated with Dolan having to remove and reinstall main ductwork in the lower level that was previously installed so Rycon (General Contractor) could install supplemental steel for the operable partitions. Reference the credit change order above to Rycon for this amount so there is no cost to the Township for this work. The costs submitted and attached for reference are fair and reasonable.

RE: Haverford Township Free Library Renovation & Addition Project- Loose Furniture

Mr. Burman,

In coordination with the Library and the project architect (Bernardon) a detailed scope of work was designed for the furniture package, inclusive of both book shelving and loose furniture, to be installed in the newly renovated Library. We then reached out to three reputable furniture Costars firms for proposals that are attached for reference. This letter is for the loose furniture award. As previously noted, the loose furniture package was above the furniture budget; however, the Library will be paying the overage directly with Cofco.

After reviewing the loose furniture proposals with the Library and Bernardon, Cofco was determined to be the lowest qualified bidder. Attached please find Cofco's proposal to furnish and install the loose furniture throughout the Library. We recommend the Township approve moving forward with Cofco in the amount of **\$408,038.45 (Four hundred eight thousand thirty-eight dollars and forty-five cents)**. Please note that this cost fits within the approved project budget for furniture scope of work.

Please let us know if you have any questions or comments.

Sincerely,

Kenneth C. Matthews

Haverford Township Parks and Recreation Department Memorandum

(Formatted for Accessibility)

Date: November 25, 2024

To: David R. Burman, Township Manager

From: Brian Barrett, Director of Parks and Recreation

Subject: McDonald Field lighting, Brookline trees and fencing, playground equipment,

Attached is a quote for supplemental field lighting at McDonald Field from NGU Field Lighting. This is an addition to the baseball lighting project. They have Sourcewell Contract #: 041123-CPL. The quote is \$12,000 and will be purchased with ARPA funds.

Also attached is a quote for 40 trees to be planted at Brookline Park from ArcheWild, COSTARS #029-E23-117. The quote is for \$25,000 and will be paid for with ARPA funds.

Also attached is a quote for perimeter fencing for Brookline Park. The purchase will be made from Miller Flooring, COSTARS #008-E22-184. The total comes to \$49,922 and will be purchased with ARPA funds.

Also attached is a quote for preschool playground equipment for Brookline Park. They are three pieces considered “imagination stations” and will be purchased from Recreation Resource COSTARS #014-E22-249. The total comes to \$18,963 and will be purchased with ARPA funds.

Also attached is a three quotes for various parks for replacement equipment. Included are 3 pre-school composites and a climbing structure and will be purchased from Recreation Resource COSTARS #014-E22-249. The quote totals come to \$26, 935 (two composites), \$10,472 (climbing structure) and \$17,976 (3rd composite) and will purchased with ARPA funds.

Also attached is a quote for a large slide to be a replacement at one of the township parks. The quote is from Ely Associates COSTARS # PA DGS 014-E23-299. The quote total comes to \$20,872 and will be purchased with ARPA Funds.

If there are any questions I will be on hand for the Board of Commissioner meeting on December 2, 2024.

OUR COMMITMENT

NGU Sports Lighting is a leading provider of high-quality sports lighting solutions. With a strong focus on innovation and cutting-edge technology, NGU Sports Lighting specializes in optimizing customer experience. This is done by defining current needs, designing a customized solution, and installing a state-of-the-art lighting systems for a verity sports facilities.

Our company is committed to enhancing the visibility, safety, and overall experience of athletes, spectators, and officials during any type of event. NGU Sports Lighting offers a comprehensive range of lighting solutions tailored to meet your specific requirements and expectations. Our team of experts work closely with clients to assess their needs, taking into account factors such as field size, sport-specific lighting standards, energy efficiency, and budget constraints. By leveraging our **extensive industry knowledge and expertise**; we are able to deliver customized lighting solutions that optimize visibility, minimize glare and spill, while providing uniform illumination across any surface.

In addition to our commitment to performance and quality, NGU Sports Lighting also prioritizes **energy efficiency and sustainability**. We utilize advanced lighting technologies, such as LED, to minimize energy consumption and reduce environmental impact. Our lighting solutions are designed to provide long-lasting performance, requiring minimal maintenance and offering significant cost savings over time.

NGU Sports Lighting takes pride in our ability to deliver turnkey lighting solutions, from initial design and engineering to installation and ongoing support. We recognize that creating a brand-new lighting strategy for any venue is a significant task, especially when you are busy overseeing other critical matters. As a company that helped introduce LED Sports Lighting to the industry over a decade ago and with over 100 years of combined experience; our team of professionals are dedicated to providing exceptional customer service and **ensuring complete satisfaction throughout the entire project lifecycle**.

Your project experience is our top priority.

Your conversion project will be executed in 3-steps:

Evaluate. Design. Implement.

A proof positive process to give you the very best experience.

SYSTEM BENEFITS

LOWER OPERATIONAL COSTS

Operational Efficiency - The Ephesus Sports Lighting System is on average 45% more energy efficient than other solid-state lighting systems. Making the Ephesus solution the most efficient sports system in the marketplace.

HIGHER PERFORMANCE AND RELIABILITY

System Reliability – Designed and manufactured to the highest reliability standards in the marketplace. The system uses chip on board innovation; which has a much higher performance reliability than the soldered LED chip method used by other manufacturers.

SUPERIOR OPERATIONAL FLEXIBILITY

Enhanced System Control – The new system provides individual fixture control with full dimming capabilities. The system can be controlled wirelessly from any handheld device, PC or LAN connected device. It's simple to use and provides the owner with the most user flexible system on the market.

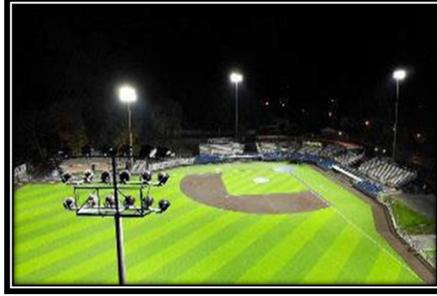

RECREATIONAL EXPERIENCE

TOTAL CONTROL OF POLES & ZONES

PROJECT DETAILS

From start to finish, we take your ideas and turn them into reality....

PROJECT NAME: McDonald Field- Extra Lights

PROJECT OVERVIEW

We are pleased to provide you with an Offer of Business for McDonald Field. NGU will provide you with the extra 4 lights.

Scope Summary:

We are adding 4 extra fixtures to the left pole to provide extra light for the multi- purpose field. These lights will be tied into the wireless controls provided for the baseball field.

TOTAL: \$12,000.00

Does not include sales tax

Top Product Features

- Streamlined design ideal for one-to-one integral ballast retrofit systems speeding up and simplifying installation.
- Pre-aiming capability reduces installation time and ensures aiming precision.
- Industry leading light source reliability with Chip-on-Board LEDs with an efficacy up to 174 lumens per Watt.
- Award winning glare and cutoff control via patented Hybrid Reflector and TIR Optical System.
- 4000K & 5700K CCT options to meet diverse venue requirements.
- Top Yoke, Bottom Yoke, and Pendant mounting options for flexibility in applications.
- Power redundancy insures system reliability.
- Wired DMX and Wireless AirMesh control protocols allow for system alerts, scheduling, and on-demand control of static and dynamic lighting scenes.
- Options to meet Trade Agreements Act requirements.

ArcheWild-Brookline School Park Tree Planting

Introduction

Thank you for contacting ArcheWild® for assistance with your planting project! This document includes our proposal for planting trees on a parcel located at 1105 Earlington Rd in Havertown PA.

Size and Location

The proposed project site, shown in Figure 1, is an approximately 2-acre parcel of land that was formerly the location of a school building, which has now been removed. There are plans to convert this parcel to a public park in the near future.

Objectives

Our understanding is that your goals for this planting project include the following:

- Rapidly establish tree cover using large-caliper native trees,
- Utilize species with attractive aesthetics such as flowers and fall color,
- Select species that are suitable for the site conditions and able to withstand environmental challenges such as drought, road salt and soil compaction,
- Minimize long-term maintenance requirements.

Figure 1-Project location

Current Conditions

The project site is currently almost entirely open aside from a few scattered mature trees, with turf grass groundcover, an approximately 5,500 square foot gravel parking area, and an approximately 6,000 square foot tennis court. The soil is expected to be severely compacted due to activities related to the removal of the school.

The presence of above and/or below ground utilities on this site will inform the planting layout. The project site is also adjacent to two intersections, so trees will need to be located such that they do not interfere with any required sight lines at either intersection. The final planting layout should be inspected and approved by the Township prior to planting to ensure that all such requirements are met.

Planned Deliverables

The proposed project would entail planting 40, 1.5-2” caliper street trees. All trees will be species native to Pennsylvania.

Following planting, the trees will be mulched and the trunks will be protected from deer using plastic tubing. Deer have the potential to injure or kill even mature trees by rubbing off the outer bark and girdling the tree, so utilizing protection against deer will be important to the success of this project. The project will also include one year of follow up maintenance, including watering, mulching and weed control as needed.

Budget

Phase	Tasks	Budget
Planting, Protection and Maintenance	<ul style="list-style-type: none"> ○ Species selection and planting design, ○ Deliver and plant 40 1.5-2” caliper trees, and ○ Mulch and tube trees following planting, ○ One year of maintenance following planting, including remulching, watering and weed suppression as required, ○ Includes a one-year warranty on all plant material. 	\$25,000

Summary and Next Steps

This tree planting has the potential to help create a beautiful new natural space within Haverford Township that can be enjoyed by residents and wildlife alike. Once we have your feedback on this proposal, our next step will be the preparation of a detailed planting design and species list based on your objectives and requirements.

Thank you,

COSTARS PROPOSAL

SPORTS CONSTRUCTION DIVISION
Athletic Surfaces & Equipment

TO: BRIAN BARRETT - HAVERFORD TOWNSHIP

FROM: KEVIN CUNNINGHAM

JOB: BROOKLINE ELEMENTARY SCHOOL FENCE PROJECT

DATE: 11/20/24

The following proposal has been prepared for the replacement fence around three sides of the property at the former Brookline Elementary School in Havertown, PA. Miller Sports Construction (MSC) proposes to supply all materials, and equipment necessary to complete the work as further specified:

COSTARS Contract Pricing: The following pricing is based on CoStars pricing structure. Costars is a Pennsylvania State approved cooperative purchasing platform. Miller Sports Construction, West Chester, PA is authorized under CoStars contract number 008-E22-184 (Maintenance, Repair & Operation (MRO)). Costars is a procurement cooperative which provide predetermined preferential pricing. The products/resources contained with the program inventory have been bid, vetted, and approved by the buying cooperative, allowing the purchasing facility/customer to use in lieu of a formal bid process.

Costars: Contract #: 008-E22-184 – Maintenance, Repair & Operation (MRO)

SCOPE OF WORK - Brookline Elementary School Fence Project

1. Supply and install approximately 500' of 5' high ornamental fence around three sides of the property at the former Brookline Elementary School in Havertown, PA.
 - a. The fence would be installed along the Kenmore Road, Earlington Road and Sagamore Road sides of the property, and does not include the fence along the homes on the rear side of the park. No gates would be installed in this fence and the existing chain link fence along Sagamore Road and the post and rail fence along Earlington Road would be removed from the job site.
 - b. The fence would be either a 5' high Iron World Aberdeen Commercial style three rail fence or a 5' high, #202 Jerith industrial aluminum fence.
 - c. The 5' high steel fence would be a steel Iron World Aberdeen style Maverick Supreme plus three rail fence with 3/4" pickets, 1-7/16" by 1-1/2" #14 gauge channel rails and 2-1/2" OD posts set approximately 36" deep in concrete. The fence style would be flattop and the panels would be 8' long.
 - d. The 5' high aluminum fence would be an aluminum Jerith #202 industrial three rail fence with 1" pickets, 1-5/8" rails and 2-1/2" OD posts set approximately 36" deep in concrete. The fence style would be flattop and the panels would be 6' long.

Scope Cost\$ 49,922.00
 Unit Cost per LF if above 500 LF.....\$ 99.84 Per LF

COSTARS PROPOSAL
SPORTS CONSTRUCTION DIVISION
Athletic Surfaces & Equipment

Notes-

1. Please note that this price is based on prevailing wage labor rates.
2. A visit to the job site before start of work would be needed to confirm this price.
3. Any permits would be the responsibility of the customer.
4. If needed, an insurance certificate can be provided.
5. A lift would be used to remove and then install the cages and fence, some remedial work on the ground of the cages may need to be done by others.

TERMS & CONDITIONS: In accepting this proposal, the Owner/Customer agrees and accepts the following:

- Customer/Owner responsible for:
 - Removal of all equipment prior to MSC arrival/site mobilization
 - Proper lighting, electric supply, as applicable to the scope of work, water supply
 - Access to and use of project site restrooms
 - Security of the project site/space during work period, including appropriate signage, as applicable
 - 24/7 access to project site, as needed
 - Tax exempt certificate
 - Permits, as applicable
 - Underground lines need to be marked out by the participating utilities
 - All clearing of brush or trees from the fence line
 - Any completion date given is subject to change because of adverse weather conditions, site conditions/and or any condition, not controlled by MSC that might alter MSC's ability to perform its work. MSC will not be responsible for delays due to these conditions.

Corporate Office
827 Lincoln Avenue Suite 15

Tel: 804.405.4884 Fax: 610.626.3000

- This proposal is based on current material, rental, and labor pricing as of the date of this proposal. If the project is delayed or our work under this proposal is pushed into another calendar year, MSC will be entitled to a price increase matching any increase in Labor (PW rates as well as base rate) and increase in material costs as posted by approved system supplier.
- Any union labor required due to the general contractor's contractual union agreements. Project Labor Agreements, or job specific apprenticeship requirements, will be provided at no cost to MSC.
- An extra charge may be incurred if "hard digging" is encountered.
- Payment Terms:
 - Project to be invoiced 50% to initiate order; balance due upon delivery
 - Installation/labor services to be billed monthly based on scope completion-Net 30
 - 1.5% per month late fee for any unpaid balance
 - Applicable service charges will be added for credit card payment(s)
- Quote is based on 2024 installation and includes all Contractor and Manufacturer Qualifications.
- Pricing is valid for 30 days

Haverford Township – Darby Creek Restoration Site Preparation and Seeding

Introduction

Thank you for reaching out to ArcheWild® for support with restoring the open space along Darby Creek! The proposed project area is currently heavily invaded and is undergoing treatment for Japanese knotweed. You have expressed interest in establishing native riparian vegetation following invasive species control. This document provides a potential path to preparing this area for native plant establishment, including budgets and proposed sequencing. This proposal is an updated version of the document originally sent in August 2024.

Scope, Size and Location

The project area is located along Darby Creek in Haverford Township near Burmont Road. The three target areas for restoration along Darby Creek are shown in Figure 1. Area 1 covers 0.4 acres, Area 2 covers 2 acres and Area 3 covers 1.7 acres, for a total project area of 4.1 acres. The Japanese knotweed populations that are currently undergoing control by Weeds Inc. comprise roughly 15-20% of the total project area.

There are plans to establish a new macadam trail through the project area in the near future to extend an important section of the local trail network that will eventually connect to John Heinz National Wildlife Refuge.

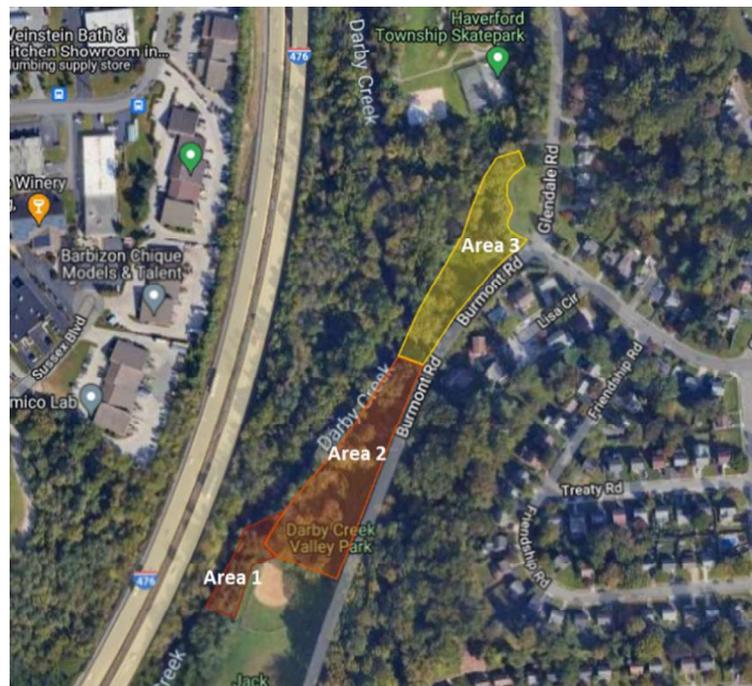

Figure 1-Project Site

Current Conditions

Haverford Township staff have cleared Japanese knotweed from the target areas, and Weeds Inc. will be treating knotweed regrowth and other invasives in the project area this fall. Invasive species present include porcelain berry, Japanese honeysuckle and multiflora rose. Japanese stiltgrass is also taking over

the understory wherever sufficient light is available, and populations of stiltgrass can be expected to increase in the newly cleared areas now that they have been released from knotweed competition.

In the areas where Japanese knotweed has been treated, a layer of cut stems still remains, as shown in Figure 2, which will need to be removed before seeding is possible.

Figure 2- Knotweed stems in treated areas

Planned Deliverables

Haverford Township has expressed interest in seeding the areas where invasive species have been controlled with a riparian seed mix.

For a native planting or seeding event to be successful, there are a number of steps that are needed to properly prepare the site – namely, nearly complete suppression of the major invasive species. Prior to sowing seed, the site should ideally be freed from major invasive species competition that will overwhelm and outcompete the native plants, and exposed soil should be available to allow seed-soil contact. The following section describes a proposed process by which the entire 4.1-acre project area could be cleaned and prepared for native plant establishment by the fall of 2025.

Sequence and Timing

The goal of this program design is to properly prepare the site for the eventual establishment of native vegetation by the fall of 2025. The proposed project sequence would include activities beginning in 2024 and end in mid-2025.

In 2024, the proposed activities would include hand clearing and/or grinding the dead woody material in place throughout the site using a forestry mower or similar equipment once Weeds Inc. has completed their fall treatment.

In 2025, the proposed activities would include pre- and post-emergent treatments to arrest the development of stiltgrass, mile-a-minute, and other annual invasives, as well as suppression of any perennial or woody invasive regrowth. Seeding could then occur in the fall of 2025.

Budget

The table below shows the 2024 and 2025 budgets for each of the steps described in the sequencing above.

2024		
Phase	Tasks	Budget
Reclamation Clearing	<ul style="list-style-type: none"> ○ Clear woody invasive species from the understory following treatment using a forestry mower or similar equipment ○ Grind debris and cut stems using mower ○ Does not include moving debris offsite 	\$8,600

2025		
Phase	Tasks	Budget
Detailed Follow-up Invasive Control	<ul style="list-style-type: none"> ○ Chemically control stiltgrass throughout 4.1-acre project area ○ Includes pre- and post-emergent treatments ○ Chemically control woody invasive species regrowth in understory throughout 4.1-acre project site ○ Targets include porcelain berry, Japanese honeysuckle, multiflora rose, privet and barberry 	\$6,000
Native Seeding	<ul style="list-style-type: none"> ○ Sow native seed mix throughout project area at a minimum rate of 20lbs/acre, ○ Seed mix to include perennial grasses and forbs, ○ Accessible areas to be seeded using a seed drill, ○ Inaccessible areas to be hand seeded and protected with straw and/or straw matting. 	\$12,300

Summary and Next Steps

We are happy to support you however we can in restoring this open space and preparing it to be enjoyed by residents using the future trail.

Thank you,

Isabel LaLonde, Project Manager
 Office: 855-752-6862

**RE: Darby and Manoa Road Intersection
Signal Improvements**

Dear Mr. Burman:

As requested, on behalf of the Township of Haverford we solicited quotes from three (3) contractors for the above referenced improvements. The quotes were received as of Monday, October 7th, 2024, at 12:00 p.m. The low bidder was Charles A. Higgins & Sons, Inc. of Media, PA with a base bid amount of \$12,360.00 and a recommendation (outside the request) to upgrade the existing signal controller for an additional \$5,300.00. As part of their review of the existing controller, Higgins noted that the timer unit (not the full cabinet) needs to be replaced to accommodate the signal improvements. The attached quotes are as listed below.

Charles H. Higgins & Sons	\$12,368.00 (recommended a \$5,300 upgrade of the signal controller)
Lenni Electric Corporation	\$34,722.00
Signal Services	No Response (submitted a January 2024 quote of \$21,533.00)

We recommend the Township consider awarding this contract to Charles A. Higgins & Sons, Inc. in the total low bid amount of \$17,660.00, including the upgrade for the existing signal controller.

Please be reminded that per our discussions with PADOT, after these signal improvements are completed, the handicap ramps are to be reconstructed and the signal plan is to be revised. We are proceeding with both these tasks. Should you have any questions or comments, please do not hesitate to contact the undersigned.

Sincerely,
PENNONI

David Pennoni, PE
Township Engineer

Haverford Township

Comprehensive Zoning Ordinance Review and Rewrite

November 15, 2024

David Burman, Township Manager
Jaime Jilozian, Director of Community Development
Haverford Township

RE: RFP Response: Haverford Township Comprehensive Zoning Ordinance Review and Rewrite

Dear Mr. Burman and Ms. Jilozian,

FHI Studio, now IMEG, is pleased to respond to Haverford's request for a comprehensive update of its zoning ordinance. We bring a full understanding and appreciation of the importance of a comprehensive, cohesive, modern, and clear set of zoning regulations for the Town. This effort has the potential to provide a set of regulations that will support and guide development that adheres to the current and future vision of the Township.

We have assembled an exemplary team for this project that combines zoning, sustainability, and urban design experts with the ability to conduct high-quality analysis to assess and improve your ordinances. FHI Studio will provide Haverford Township with a partner to support its efforts, backed by:

- Trusted leadership from our Project Manager, **Adam Tecza, AICP, PP**, and Senior Advisor, **Francisco Gomes, AICP**, who both have extensive experience in writing zoning regulations.
- A strategic partner in **BFJ Planning**, who has a substantial body of zoning work, throughout the Northeast and beyond, in a wide range of projects, from full code updates to targeted revisions that tackle specific issues or geographic areas.
- A robust team is available on an as-needed basis to address specific issues and needs while comprehensively understanding the bigger issues and goals.
- Visual communication experts who translate regulatory zoning language into graphically rich, easy-to-understand illustrations and examples.
- A team of experts who have extensive experience in writing zoning regulations, including several of your neighbors in Delaware County.

Enclosed, you will find an approach and set of qualifications for FHI Studio, demonstrating a wide range of experience directly applicable to meeting the needs of Haverford. Adam will be a hands-on presence throughout the zoning rewrite and will be regularly available for communication with the Town. He will be supported as needed by a variety of technical experts from our firm, based on the Town's requests and scope of work.

Please feel free to contact Adam Tecza or me for any further information about our qualifications. You can reach Adam at 917-933-7445 or atecza@fhistudio.com. I can be reached via email at mmorehouse@fhistudio.com.

Sincerely,

Michael Morehouse, PE, Transportation & Design Service Leader
FHI Studio, now IMEG

Firm Overview

Meet FHI Studio, now IMEG.

We are planners, ecologists, engineers, and designers with a passion for enhancing communities. From a one-woman founder in 1987 to a staff of over 60 professionals in 2024, we continue to grow without sacrificing what matters most: our client service, our culture, and our values.

FHI Studio, now IMEG integrates expertise in a wide array of services and technical disciplines. Across planning, engagement, mobility, and design, we look at the whole to understand the parts of every project. From internal brainstorm sessions to client, stakeholder, and public workshops, we bring a diversity of knowledge and the creativity to get things done.

Our four studios work together to ensure comprehensive and thoughtful solutions, demonstrating our commitment to continual learning and collaboration. **This synergy allows us to approach complex zoning challenges with an innovative, interdisciplinary perspective.**

By leveraging the collective knowledge of our planning, engagement, and design experts, our team is uniquely positioned to deliver a zoning ordinance that aligns with the Township's goals for adaptability, sustainability, and growth. We are enthusiastic about partnering with Haverford Township to create a modern, cohesive zoning framework that will guide the community for decades to come.

Mobility

Planning

Engagement

Design

Planning

We bring a holistic approach to planning. We consider community needs, built conditions and environmental factors. Our team ensure the planning process and its outcomes respond to the local community's needs while meeting broader project objectives. Our urban designers focus on supporting and improving the livability of communities by balancing housing, economic development, infrastructure, and environmental needs. Our environmental planners integrate natural and cultural resources into the planning process to inform alternatives development, meet regulatory requirements, and adapt to changing climate conditions. Ultimately, we advance projects which protect and enhance the social, cultural, and natural features of the communities in which we work.

Engagement

Thoughtful engagement with decision-makers, stakeholders, and the general public provides the foundation for sound planning, successful projects, and better communities. With keen insights built on decades of experience, we tailor our engagement and communications strategies to meet the needs of each project and community. We deliver meaningful, equitable, and useful engagement. Our experts strategically assesses the needs of each project and provides customized solutions to meet project goals. Our team is highly skilled in communicating complex technical information in a clear, focused manner and utilizing a wide range of media. As branding and visual communications specialists, we help our clients craft a memorable, cohesive, message. Additionally, we are experts in facilitating and moderating meetings, as well as performing all organizational logistics to make our meetings and public interactions successful.

Mobility

Safe, efficient, and equitable mobility options connect people and places. Our team has the planning, regulatory, and design experience to ensure transportation projects focus on those people and places. From regional strategies to local street design, we work to improve mobility for all users at every level. With a foundation of engagement and inclusion, Our transportation professionals provide our clients and communities with action-oriented solutions to keep moving forward.

Design

The best projects result from a creative and integrated planning and design process. We strive to blend both the natural system and the built environment into a cohesive functioning, yet aesthetically pleasing space. Our talented landscape architecture and environmental specialists and scientists are leaders in permitting, design, and detailing of places for people.

Planning Expertise

- Master Planning and Zoning
- Public Involvement
- Conservation Planning
- Urban Design
- Active Transportation Planning

“ We are **in love with the plan**. Just want to reiterate what a great job you have done and that we share your sentiment that it doesn't look like other plans, which is exactly what we wanted. ”

– Katie Deluca, Town of Greenwich
In regards to the Plan of Conservation and Development

So, why FHI Studio?

Our team has extensive local zoning experience including leading the development of the **Media Hybrid Form-Based Code** and the **Swarthmore Town Center Zoning Ordinance**. Supporting larger comprehensive zoning updates, we have developed downtown-specific regulations for Oxford Borough and are currently working on mixed-used corridor standards for

East Whiteland Township, both in Chester County. This work has built on our extensive zoning and design guidelines projects in Connecticut, including the award-winning Hartford Form-Based Code as well as projects in West Hartford, Brookfield, and Enfield, among others.

Our Partners: BFJ Planning

BFJ Planning will be joining the team to support all aspects of the code development process while leading the revisions to the supplemental regulations. They have a substantial body of zoning work, throughout the Northeast and beyond, in a wide range of projects. They have done full code updates as well as targeted revisions that tackle specific issues or geographic areas. In terms of comprehensive zoning updates, key examples include the **City of Philadelphia; the City of Trenton, NJ; the Villages of Rockville Centre and Tuckahoe, NY; the Town of Monroe, CT; and the City of Wheeling, WV.**

In addition, BFJ has undertaken zoning initiatives with municipalities to accomplish key objectives, such as activating downtowns and business corridors, leveraging transit and waterfront assets, supporting desired residential scale, addressing impacts of challenging land uses, and creating regulatory standards for key aspects of development. The following section provides summaries of representative projects.

FHI Studio and BFJ Planning have a long history of collaboration. The staff proposed for this project have worked together on projects across the northeast, including in Jersey City, NJ, Red Bank, NJ, and Lindenhurst, NY.

Our Team

Project Management

Adam Tecza, AICP, PP
Project Manager

Adam Tecza, AICP, PP will serve as your primary point of contact and project manager. Based in Philadelphia, he has managed all of FHI Studio's zoning work in the area and is therefore very familiar with the opportunities and constraints of working on Pennsylvania zoning ordinances. As a planner and urban designer, his work has focused on developing context-sensitive design solutions for residential and downtown areas. For example, Adam is currently working with NJ TRANSIT to provide technical assistance to designated Transit Villages who are interested in encouraging Missing Middle Housing. As part of that effort, Adam led the development of the Gentle Density and Missing Middle Housing Guide and Technical Assistance for NJ Transit Villages. He is also the project manager for the Radnor Comprehensive Plan ([Radnor2035](#)) and led the development of the [Media Hybrid Form-Based Code](#).

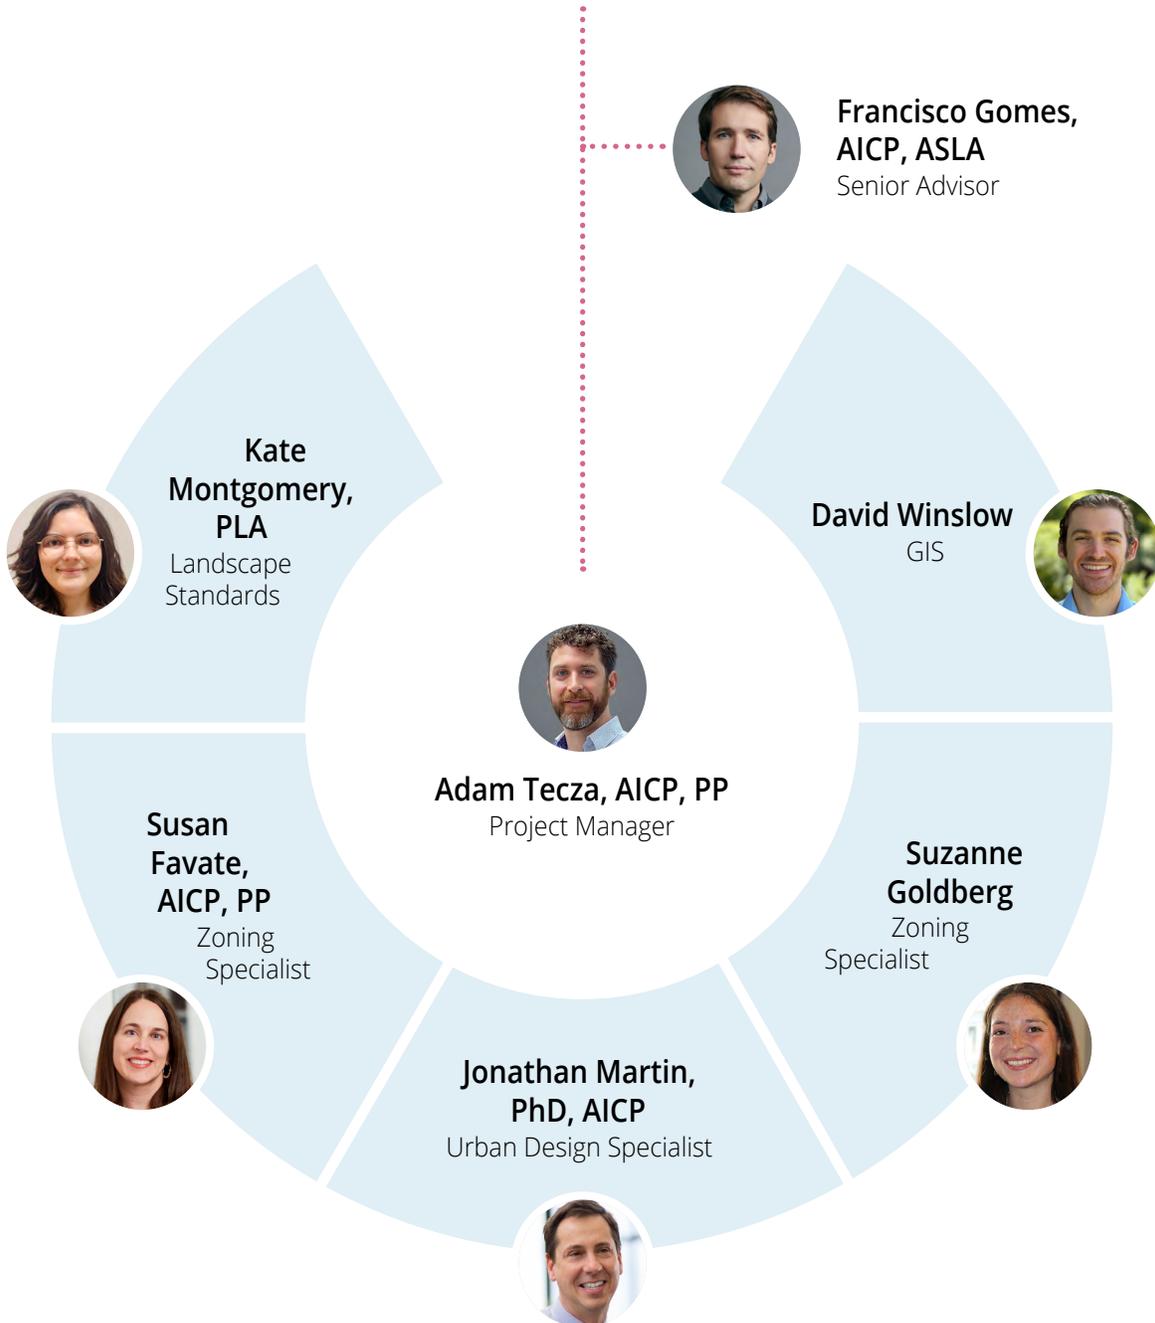

Before joining FHI Studio, Adam worked with the Borough of Morristown, NJ to develop the only municipal-wide form-based code in the State. He has also developed several hybrid form-based ordinances to support the North Jersey Transportation Planning Authority's (NJTPA) transit-oriented development initiatives. This includes ordinances for Raritan Borough, Freehold Borough, and Bound Brook Borough.

Adam will be supported by a multidisciplinary team of planners, urban designers, and engagement specialists with extensive experience in zoning ordinance updates and public engagement. Together, this team combines local knowledge, technical expertise, and a commitment to creating zoning solutions that are user-friendly and forward-thinking.

An organizational chart and detailed resumes for Adam and the support team are included in the following pages for your reference.

Overview

Adam leads multi-disciplinary planning and urban design teams that focus on the value of culture, history, and economy of place as the foundation for bold yet viable proposals. His expertise includes **comprehensive and land use planning, equity planning, complete streets planning, redevelopment planning, form-based zoning, and urban design.** Two of Adam's projects have won American Planning Association - New Jersey Chapter Awards: the Trenton250 Master Plan and the Cherry Hill Master Plan.

Experience

Media Borough Hybrid Form-Based Code | Media, PA | 2021 – Ongoing

Adam led the development of Media Borough's Hybrid Form-Based Code. The project focuses on the Borough's residential neighborhoods. The code introduces new housing typologies - including accessory dwelling units (ADUs) and missing middle typologies - that are consistent with the high-quality character of the community. The code promotes the creation of walkable, affordable housing that promotes community interaction. The project included extensive community engagement that allowed residents to guide the goals of the code and identify design elements that supported those goals.

Swarthmore Town Center Zoning Update | Swarthmore, PA | 2023

Adam served as Project Manager for the Swarthmore Town Center Zoning Update, leading efforts to craft context-sensitive design solutions for a vibrant, mixed-use town center. The project emphasized transit-oriented development, incorporating zoning updates that provided incentives for affordable housing and promoted the construction of environmentally sustainable buildings meeting national green building standards. Adam's leadership ensured the updated ordinance aligned with the community's vision, fostering a balanced approach to growth that supports economic vitality, environmental stewardship, and housing diversity.

NJ TRANSIT Gentle Density and Missing Middle Housing In New Jersey: Technical Assistance | Statewide, NJ | 2024 – Ongoing

Adam is leading the development of a Gentle Density and Missing Middle Housing Guide for NJ TRANSIT. The guide will support municipalities looking to encourage more missing middle housing, especially in the State's Transit Villages. The guide includes an overview of missing middle housing, a history of residential development in New Jersey, and ten illustrative examples of missing middle housing. The guide also provides guidance on planning and zoning for missing middle housing, including suggestions on how to conduct spatial and statistical analysis, how to consider equity and historic preservation, and approaches to engagement. The guide includes a model Accessory Dwelling Unit Ordinance that communities can adapt to their needs. Adam also will be providing technical assistance to three municipalities who are looking for planning and zoning support in implementing the guide.

Sustainable Dunkirk 2030: Zoning Code for Resiliency & Smart Growth | Dunkirk, NY | 2024 – Ongoing

FHI Studio, now IMEG is supporting the project team developing a comprehensive zoning code update for the City of Dunkirk, NY. As FHI Studio, now IMEG's project manager, Adam's role focuses on implementing a hybrid form-based code and establishing architectural design guidelines tailored to Dunkirk's downtown and waterfront districts. The project aims to update zoning provisions across various districts to encourage diverse development types, foster social integration, strengthen Dunkirk's unique sense of place, enhance connectivity and mobility, and support local job creation, positioning the city for sustainable growth and economic vitality.

Oxford SALDO and Zoning Update | Oxford, PA | 2023 – Ongoing

Adam is the urban design lead on a project that will update the Borough's subdivision and land development ordinances and its zoning regulations. He is responsible for the development of hybrid form-based regulations to support the Borough's goal of encouraging contextual design in its downtown district. Adam's work includes developing activities and facilitating community engagement around design, drafting design guidelines and standards, and providing graphic support for the project.

Fairfield Plan of Conservation & Development and Zoning Regulations Updates | Fairfield, CT | 2022 – Ongoing

Adam is leading the development of the POCD and amendment to the zoning ordinance. Among other work, Adam has help the Town understand how to update zoning to allow more mixed use development in key areas of growth while balancing the need to protect vital open spaces. The plan includes a strong emphasis on building a resilient Fairfield. This work included identifying areas for protection and where zoning needs to be changed to discourage building in hazardous areas.

Radnor Comprehensive Plan | Radnor, PA | 2022 – Ongoing

Adam is the project manager for Radnor2035, Radnor's Comprehensive Plan. In that role, he led the development of a report that detailed the social, economic, and physical trends and conditions in the community. The first round of engagement included a virtual workshop that had more than 500 who submitted more than 3500 comments. The plan will include a public in-person workshop and the development of a plan to address 10 topic areas, including land use, environment, and mobility.

24 Years in Industry

Overview

Francisco specializes in **master planning and multimodal transportation**. He integrates his technical expertise in the areas of transportation planning, community planning, and urban design within the broader discipline of placemaking for people. Francisco's experience includes the development of municipal and regional master plans, creation of bicycle and pedestrian master plans, transit-oriented development plans, town center revitalization planning and urban master planning. Francisco uses digital media to communicate design and planning concepts to stakeholders ranging from the general public to elected officials and planning professionals.

Experience

Brooklyn Bridge – Montgomery Coastal Resilience Project | New York, NY | 2018 – 2022

Francisco is part of the Project Team working with the New York City Economic Development Commission (NYCEDC) for this environmental evaluation of an integrated coastal protection system aimed at reducing flood risk due to coastal storms and sea level rise in Lower Manhattan. Francisco produced land use and zoning assessments for the project's Environmental Assessment and led the development of the waterfront certification package pursuant to the City's waterfront zoning regulations.

NJTPA Transit-Oriented-Development Planning Assistance | Northern NJ | 2017 – 2018

Francisco was Project Manager for FHI Studio, now IMEG and led mobility planning for three TOD planning projects in New Jersey. These projects are located in Boonton, Green Brook, and Freehold. Each community has unique needs with respect to improving access to, and development in support of, transit. As a member of a multi-disciplinary team, FHI Studio, now IMEG provided transportation expertise and public outreach support for the project.

Bristol Zoning Regulations Update | Bristol, CT | 2021 – Ongoing

Francisco is leading a comprehensive rewrite of the City's zoning regulations. Working closely with the City planner and zoning commission, FHI Studio, now IMEG is reviewing and rewriting the zoning regulations to provide regulations that are more consistent, user friendly, easier to administer, and up-to-date with respect to best practices, statutory changes, and case law.

Enfield Station Environmental Assessment | Enfield, CT | 2023 – Ongoing

FHI Studio, now IMEG is supporting the preparation of an Environmental Assessment (EA) for a new train station in Enfield, CT. The EA is being prepared in accordance with the National Environmental Policy Act (NEPA). Francisco has prepared the Land Use, Zoning and Development; Visual Resources; and Socioeconomic Resources sections of the EA. He's also coordinated with the Town of Enfield about planned development in the area surrounding the station.

Greenwich Commercial Zone Updates | Greenwich, CT | 2017 – 2019

Francisco was FHI Studio, now IMEG's Project Manager for this project which aimed to rewrite commercial zone standards for Greenwich's downtown and village center commercial districts. In support of this effort, FHI Studio, now IMEG conducted land uses inventories of the commercial zones and compared those uses to parking inventory and utilization. These findings informed FHI Studio, now IMEG's recommendations, which included new parking requirements and administrative procedures for use and development applications in the commercial zones.

Fairfield Plan of Conservation and Development and Zoning Regulations Update | Fairfield, CT | 2022 – Ongoing

Francisco is Zoning Lead for the Town's Plan of Conservation and Development and Zoning Regulation Updates. The Plan seeks to modernize and update Fairfield's Zoning Regulations into a searchable, web-compatible document while incorporating the goals of the Town's recent planning efforts. Working closely with the Town Zoning Commission, Francisco is reviewing the Town's existing regulations to identify issues and solutions in order to reformat the document and ensure that a solid, working model of the regulations is adopted in a timely manner. Francisco will also ensure that the Regulations are compliant with CT Public Act 21-29 during this phase.

Van Cortlandt Park Pedestrian Bridge Project | Bronx, NY | 2019

FHI Studio, now IMEG assisted the New York City Department of Design and Construction and the New York City Department of Parks and Recreation with the preparation of a CEQR EAS evaluating the construction of a pedestrian bridge over the Major Deegan Expressway in the Bronx. The bridge will connect sections of Van Cortlandt Park that are currently segmented by the highway. Key resource topics in the analysis include natural and cultural resources. FHI Studio, now IMEG was also responsible for the agency coordination. Francisco served as a senior planner and prepared the urban design and visual section, as well as the land use, zoning and public policies section.

Kate Montgomery PLA

Senior Landscape Architect

Education

Bachelor of Landscape Architecture, SUNY College of Environmental Science and Forestry

Certifications

Registered Landscape Architect in the State of Connecticut, #LAR.0001573
SITES Accredited Professional

Affiliations

American Society of Landscape Architects, Connecticut Chapter

Years Experience

1 Years with Firm
7 Years in Industry

Overview

Kate is a passionate landscape architect dedicated to revitalizing public spaces and reconnecting people with the natural world. Kate strives to integrate urban ecology into our communities and ensure multimodal transportation options are accessible to everyone. Traveling and working in various environments has provided Kate with an in-depth knowledge of northeast native plants, diverse communities, and exposure to micro-mobility infrastructure. As a member of FHI Studio, now IMEG, Kate manages and collaborates on a broad spectrum of projects, ranging from large- to small-scale and from schematic design to construction documents.

Experience

Kern Park Sensory Garden | Bristol, CT | 2023

Kate designed an adaptable and immersive sensory garden for Kern Park that can potentially expand to connect future park enhancements. The plant material selected offers a year-round multisensory experience featuring diverse textures, sounds, and smells for all ages and abilities.

Chrysalis Townhouses | New Britain, CT | 2023 – Ongoing

Kate coordinated with the design team to develop construction documents for the second residential development phase on the historic Berkowitz Building site. Site improvements include site lighting, plantings, new and expanded parking areas, and accessible connections to the proposed townhouses.

CRCOG East Coast Greenway Project | Hartford, East Hartford, Bloomfield, Simsbury, CT | 2022 – 2024

FHI Study analyzed options for a multi-use trail route along the historic Griffin Rail Line from Downtown Hartford to Bloomfield Center. The trail must accommodate rail traffic alongside trail usage (rail with trail). Kate created graphics to illustrate the existing conditions and constraints along the route.

Hartford Bicycle Facility Concept Plans | Hartford, CT | 2023 – Ongoing

As part of the Vision Zero Initiative and other neighborhood traffic calming and pedestrian safety endeavors, FHI Studio, now IMEG is assisting the City of Hartford with the design and implementation of quick-build traffic calming and pedestrian safety projects across the city. Kate's role includes developing base maps in CAD from GIS information and drafting construction documents for the project.

DATCO Bus Facility Wetland Buffer Planting | Bloomfield, CT | 2023

The expansion and renovations of this school bus facility required the clearing of the woodland edge uphill from a wetland. Kate designed a wetland buffer and woodland edge planting for the client to meet the Inland Wetland Commission conditions of approval. The planting plan, consisting of trees, shrubs, and perennials, aims to quickly reestablish a woodland edge using native plant species found on site as well as additional species that will regenerate this woodland edge.

CT Route 66 Corridor Study | Portland, Cobalt, East Hampton, CT | 2019*

As part of this transportation and planning study for 11 miles of Connecticut State Route 66, Kate conducted a field visit and developed a written and photographic analysis of existing conditions. A narrative was developed based on these field observations, and illustrative design recommendations were annotated for three 200 linear foot sections of the corridor. Two alternatives were developed for Cobalt Center: one traffic circle concept and one traditional signaled intersection with safety improvements. The report was prepared for RiverCOG and the Towns of Portland & East Hampton.

Goodwin Park Entrance and Trail Connection Concepts, Hartford, CT | 2023*

Goodwin Park is a 237-acre park providing active and passive recreation. The first of the project goals included connecting the existing roads and trails to provide a walking loop around the park. The second goal was to provide a new pedestrian entrance and accessible connection to the existing basketball court and playground areas within the park from Maple Avenue. Improvements for the existing Maple Avenue vehicular entrance and accessible parking at the existing softball field were also included in the scope. Kate worked with the community to provide schematic design concepts for the Goodwin Park entrances and trail connections. Kate led the group to walk the conceptual trail locations and connections prior to finalizing the schematic-level design.

Franklin and Maple Streetscape Improvements | Hartford, CT | 2019 – 2022*

Franklin and Maple Streetscape Improvements is a \$3 million project designed for the City of Hartford Department of Public Works. The improvements aimed to create a recognizable gateway into the South End neighborhood of Hartford and improve accessibility and safety for all modes of transportation. The streetscape design includes ornamental lights, sidewalk improvements, bus stops, traffic-calming measures, plantings, and parking-protected bike lanes. As the assistant project manager, Kate researched bike lane design standards, developed design alternatives, attended meetings with the client and stakeholders, and drafted and coordinated the production of the bid documents and a detailed cost estimate. The streetscape construction was completed in the fall of 2022.

David Winslow

GIS Specialist/Planner II

Education

Bachelor of Science, Geographic Information Science and Environmental Science, University of Connecticut

Skills & Certifications

ESRI Geographic Information Systems (ArcMap, ArcPro, ArcOnline)

Python and SQL scripting, and Quantum GIS (QGIS)

Years Experience

2 Years with Firm

2 Years in Industry

Overview

David is an environmental planner with professional experience in both academia and the public sector, in which he has built and utilized **advanced Geographic Information Systems (GIS)** skills.

Experience

Hartford Neighborhood Plan Development | Hartford, CT | 2022

The Hartford Neighborhood Plan project aims to revitalize Hartford neighborhoods via accessible and focused plans. David supported existing conditions reports with data assembly and analysis, as well as map graphic creation.

CRCOG East Coast Greenway Project | Hartford, East Hartford, Bloomfield, Simsbury, CT | 2022 – 2024

David is responsible for leading the GIS efforts for the project for the Capitol Region Council of Governments (CRCOG). The East Coast Greenway Project will identify a preferred alignment to close the 10-mile gap in the East Coast Greenway Multi-Use Trail through Simsbury, Bloomfield, Hartford, and East Hartford. This is the most significant gap on the trail north of New Haven in the state. David led the planning and creation of a public-facing data viewer to assist with technical reviews of the project. The data viewer includes comprehensive data across multiple scales and niches, including environmental, transit, demographics, cultural resources, bike and pedestrian infrastructure, roadway infrastructure, and land use. The data viewer integrates links to project sites, surveys, and tools to assist viewers with planning the new trail alignment.

CTDOT Route 8 Resurfacing, Bridge Rehabilitation & Safety Improvements | Ansonia, CT | 2023 – Ongoing

David helped prepare and review the Stormwater Pollution Control Plan permit for this project for the Connecticut Department of Transportation (CTDOT). The permit includes details on over 500 culverts and outfalls along a 4-town highway stretch that includes replacing and updating aging infrastructure.

Androscoggin 2045 Metropolitan Transportation Plan | Androscoggin County, MA | 2023 – Ongoing

David is assisting in the creation of a report on bicycle and pedestrian infrastructure and safety for the Androscoggin Transportation Resource Center (ATRC). The plan will provide an existing conditions report, analysis, and a vision for improving pedestrian and bicycle safety across the 4-town region of Lewiston, Auburn, Sabattus, and Lisbon. David supports the project with data analysis, assembly and review, and map graphics.

MassDOT Inland Flooding Risk Assessment | MA | 2022 – Ongoing

The Massachusetts Inland Flooding Assessment is a comprehensive analysis of flooding, erosion, and hazard risk across multiple timescales, flood return periods, and climate simulations, for the entire State of Massachusetts. The study will provide the Massachusetts Department of Transportation (MassDOT) with a complete analysis of exposed MassDOT infrastructure and assets for a given RCP climate simulation and flood return period. David assists the project with map graphic creation and data visualization.

CTDOT Federal, State, and Local Bridge Program | Statewide, CT | 2022 – Ongoing

This Connecticut Department of Transportation (CTDOT) project is focused on the replacement of bridges throughout the state of Connecticut, with FHI taking a leading role in the environmental documentation of each bridge. David is supporting the preparation of invasive species inventories, wetland delineation reports, and environmental reports with data processing, preparation of map graphics, and report assembly.

CTDOT New Haven-Hartford-Springfield Rail Program Management | New Haven, CT – Springfield, MA | 2022 – Ongoing

David prepared environmental, demographic, and cultural screening maps for the Connecticut Department of Transportation (CTDOT) proposed Enfield Station project. He has also produced sketch maps of regulated resources identified in the field for the 3B track improvements project area in Enfield, Windsor Locks, and West Hartford, CT. David has also assisted in NEPA documentation for the proposed Enfield Station project, in addition to reviewing permits for the proposed Windsor Locks Station project. He supported data collection efforts by delineating invasive species in the field.

NHDOT Route 1A Bridge Over the Hampton Harbor Inlet (Neil R. Underwood Bridge) | Seabrook & Hampton, NH | 2022 – Ongoing

David provided support for plant mitigation efforts via the creation of map graphics and data assembly of regulated resources identified in the field for this New Hampshire Department of Transportation (NHDOT) project. David assisted in field surveys of regulated resources with plant identification, GPS data collection, and plot surveys. David also prepared map graphics of environmental resources to assist with environmental screening and the completion of several environmental permits.

SUSAN FAVATE AICP, PP

PRINCIPAL

EDUCATION

Master of Urban Planning, New York University, Robert F. Wagner Graduate School of Public Service

Bachelor of Arts in Journalism and Mass Communication, University of North Carolina at Chapel Hill

MEMBERSHIPS

Ms. Favate is a member of the New York Metro and New Jersey Chapters of the American Planning Association (APA). She is also a member of the planning board in the Borough of Chatham, NJ, and serves on the Borough's affordable housing committee.

AWARDS

Public Service Scholar, Robert Wagner Graduate School of Public Service, New York University

Robert F. Wagner School of Public Service: Dean Howard Newman Capstone Team Award, "Sing Sing Historic Prison Museum: Assessment of Economic Impacts and Planning Framework"

Susan Favate has more than 18 years of experience in land use and environmental planning for both public- and private-sector clients. Her areas of focus include zoning; comprehensive planning; site plan reviews; community visioning; environmental analysis; and real estate, market and housing studies. Prior to joining BFJ, a Perkins Eastman affiliate, Ms. Favate spent five years as a writer and editor for Dow Jones Newswires.

PROJECT EXPERIENCE

Planning Advisory Services

Township of Parsippany-Troy Hills, New Jersey

Reviews all applications to the Township's planning board and reviews other administrative zoning permit applications. In addition, provides on-call assistance to the Township for preparation of zoning ordinance revisions, traffic studies and major development and redevelopment proposals.

Planning Advisory Services

Mamaroneck, New York

Ongoing planning services, such as site plan reviews including SEQ, traffic and transportation, neighborhood context and site layout, as well as zoning code amendments, planning studies and environmental reviews on behalf of the Planning Board. Also includes an update to the Village's 1986 Master Plan and an update to its Local Waterfront Revitalization Program (LWRP).

Melville Employment Center Plan

Huntington, New York

Integrated land use, circulation and infrastructure plan for a major node of office and commercial activity within the Town of Huntington, with an overall goal of making the area more competitive while preserving quality-of-life for nearby residents and employees.

Transit-Oriented Development Zoning Regulations

Stratford, Connecticut

Hired by the Greater Bridgeport Regional Council to create transit-oriented zoning and accompanying design guidelines for downtown Stratford, Connecticut.

Planning Advisory Services

Pleasantville, New York

As a follow-up to the Master Plan work, prepared a series of zoning code revisions focused on the downtown area. The revisions provided greater flexibility in developing multifamily housing in the Central Business District, including a package of zoning incentives to facilitate mixed-use, transit-oriented development, as well as changes to required parking.

Downtown Zoning Recommendations

Sleepy Hollow, New York

Zoning recommendations included increasing flexibility of uses, modernizing parking standards to reflect a transit-oriented context, creation of incentives to encourage investment in the downtown core and adaptive reuse of historic structures, and establishment of an overlay zoning district to preserve the residential scale of the downtown periphery.

SUBASE New London Joint Land Use Study Implementation Project

Southeastern Connecticut Council of Governments
Led a multi-disciplinary team on behalf of the Southeastern Connecticut Council of Governments (SCCOG) to implement the 2017 Joint Land Use Study (JLUS) focused around the Submarine Base New London (SUBASE) and its neighboring Towns of Groton, Ledyard, Waterford, and Montville, and the Cities of Groton and New London.

Zoning Impacts Analysis

Ridgewood, New Jersey

Project manager for impacts analysis of proposed zoning ordinances to promote multifamily housing development at key sites in downtown Ridgewood. Incorporated work from multiple consultants into a unified report that assessed potential impacts on traffic, fiscal health, school district capacity and community facilities and infrastructure

Rockland County Comprehensive Plan

Rockland County, New York

Development of a long-term Comprehensive Plan for a suburban and semi-rural county, to address a

range of land use, environmental, infrastructure and transportation issues. The Plan provides general recommendations on future land use policies to implement those strategies, address key matters under direct County jurisdiction and identify potential land use conflicts among municipalities.

Land Use Element

Jersey City New Jersey

Prepared an update to the Land Use Element of the Master Plan. Since its 2000 Master Plan, the City has experienced broad-based economic growth, accompanied by employment and income gains and significant development activity. Incorporated principles such as neighborhood-scaled, contextual planning; smart growth; mobility for all users; preservation of valuable historic, scenic, and environmental assets; reinforcement of retail and commercial uses at a variety of scales; and support for a range of housing opportunities serving residents of varying ages and incomes.

Master Plan Re-Examination and Land Use Element

Hoboken, New Jersey

Preparation of an update to the City's 2010 Master Plan Re-Examination to incorporate a comprehensive vision for orderly and sustainable growth while preserving community character. Preparation of a new Land Use Element of the Master Plan to identify appropriate uses and density throughout the City and set the stage for a significant update to the zoning map and regulations.

Jonathan Martin PH.D., AICP

ASSOCIATE PRINCIPAL | BFJ PLANNING

Jonathan Martin is an urban designer with more than 20 years of experience in community planning and project management. He leads BFJ's design practice, contributing expertise in site planning, design guidelines and interactive community engagement. Mr. Martin is also a professor in graduate programs at Pratt Institute and Columbia University.

EDUCATION

Doctor of Philosophy, City and Regional Planning, Cornell University
Master of Regional Planning, Cornell University
Bachelor of Science, Architecture, Arizona State University

American Institute of Certified Planners (AICP)
New York Metro Chapter
American Planning Association (APA)
Association of Collegiate Schools of Planning,

TEACHING

Pratt Institute Center for Planning and the Environment, Professor
Columbia University Department of Urban Planning, Adjunct Professor

AWARDS

Japan Foundation, Center for Global Partnership Education Grant, 2011
Fulbright Fellow
(Research - Lecturer)
2019: Tokyo Institute of Technology, Japan.

Select Experience

Resident Surveys for PACT Program New York City Housing Authority (NYCHA)

New York, New York

Consultant to the Authority responsible for the overall development, implementation and analysis of a survey of resident satisfaction with the Permanent Affordability Commitment Together (PACT) Program. The primary purpose of the proposed survey is to gauge resident overall satisfaction with the outcomes (on-the-ground results) of the PACT Program.

Facilitation Process To Inform A Vision For SoHo/NoHo Zoning

New York, New York

Lead facilitator for SoHo/NoHo Advisory Group sponsored by Gale Brewer, Manhattan Borough President; Council Member Margaret Chin and the New York City Department of City Planning. The project involved conducting a six-month public outreach process to address outdated zoning and quality of life challenges facing these two iconic mixed-use neighborhoods in Lower Manhattan.

Beacon Comprehensive Plan Update

Beacon, New York

Consultant services to update its 2007 Comprehensive Plan to reflect current conditions, create a more user-friendly document and incorporate a special focus on the Hudson River waterfront and train station area.

Freightway Site Redevelopment Study Scarsdale, New York

Worked with the Village of Scarsdale to develop a community vision for the future development of the Freightway Site, an underutilized 2.5-acre parking facility adjacent to the Scarsdale Metro-North Railroad Station. This study provides realistic and publicly supported development goals and objectives for the Village-owned site, which has long been seen as an opportunity for transit-oriented development (TOD) given its proximity to the train station, bus lines, and one of Westchester's most walkable and active village downtowns.

Downtown Transit-Oriented Zoning Pleasantville, New York

Currently reviewing the application for the first development project to utilize the new downtown zoning development incentives, a proposed

110,000-square-foot mixed-use building fronting Memorial Plaza, across from the train station.

Neighborhood Plans: Cos Cob, Old Greenwich/Riverside/North Mianus And Glenville/Pemberwick

Greenwich, Connecticut

Over a period of several years, the Town of Greenwich, Connecticut retained BFJ Planning to create neighborhood plans for several areas within Greenwich that developed as distinct communities. For each of the three plans, the most recent of which was adopted in 2017, the process included working closely with the public to ensure that recommendations reflected the goals of the residents and the Town.

Gardens At Harriman

Harriman, New York

BFJ Planning developed a Concept Plan for a proposed 130-acre transit-oriented community adjacent to the Harriman Train Station in Orange County, NY. The Plan features approximately 1,500 residential units, as well as shopping, restaurants, recreational and community facilities in walkable, vibrant neighborhood.

Local Waterfront Revitalization Plan

Port Chester, New York

Directed urban design elements including improved design of a half-mile waterfront promenade and design of a new 2.5-acre downtown waterfront park. Other design initiatives include providing waterfront access to an existing public park outside of downtown and a redesign of a peninsula area to create new public open space along the waterfront and improve operations for a publicly operated yacht club.

Facade Improvement Program

Farmingdale, New York

As part of a Village-led facade improvement program that built on a comprehensive plan and design guidelines manual, this ongoing project develops conceptual designs for 70 existing downtown storefronts and buildings. To date, approximately 35 of these have been successfully implemented.

DO-8 Form-Based Code

New Rochelle, New York

As part of ongoing planning services provided to the City of New Rochelle, this project involved creating a downtown overlay form-based code for a historically Black neighborhood in close proximity to downtown. The planning process included significant public outreach, including meetings, focus groups, joint public and elected officials walking tours, and substantial pattern analysis of the subject area. The form-based code specifies building typologies, street-building frontage types and new civic spaces that reinforce the area's historical pattern of development.

Transit-Oriented Development Study

Branford, Connecticut

Worked with the Town of Branford to develop a Transit Oriented Development (TOD) Master Plan for the area around the expanded Branford Shoreline East Train Station. The Branford TOD Plan provides the Town with direction and tools to promote the long term transformation of the outdated industrial and commercial legacy uses in the study area, particularly near the AMTRAK rail line, to more productive uses better suited to the current local and regional economy.

*Designates work completed prior to joining BFJ Planning.

Suzanne Goldberg

PLANNER

EDUCATION

Master of Science in City and Regional Planning, Pratt Institute, Graduate Center for Planning and the Environment

Bachelor of Arts in Sociology, Kenyon College

International Honors Program (IHP), School for International Training, Buenos Aires, Argentina, Hanoi, Vietnam, Cape Town, South Africa

Suzanne Goldberg brings experience in stakeholder engagement, zoning analysis, mapping, project coordination, and graphic design. With a passion for supporting inclusive and effective community engagement, she has experience in partnership building and stakeholder collaboration within comprehensive and multidisciplinary planning projects. Prior to joining BFJ, Ms. Goldberg conducted land use research for the Municipal Art Society (MAS) in New York City.

Plan of Conservation & Development *Orange, CT*

Project Manager for the Town of Orange Plan of Conservation & Development (POCD) update. The ongoing POCD update includes a variety of engagement opportunities and will result in the development of a guiding document for land use regulations and capital improvements.

of Trustees, and members of the public to identify and implement adjustments to the Zoning Code during the Village's temporary development moratorium. Zoning recommendations addressed concerns regarding increased redevelopment of single family lots and subsequent environmental impacts, such as flooding.

NY Forward Program

Long Beach, NY | Lindenhurst, NY | North Bellport, NY

Building on the success of the Downtown Revitalization Initiative, New York State awarded communities with \$4.5 million dollars to spur economic development. Collaboration with local stakeholders resulted in Strategic Investment Plans that address a range of topics such as, mobility improvements, business expansion, and urban design initiatives.

Norwalk Design Review

Norwalk, CT

Reviewed two applications received by the City of Norwalk based on their compliance with the Central Business District regulations and design standards. Applications included a 204-unit mixed-use development and a hotel.

Scarsdale Zoning Study and Recommendations

Scarsdale, NY

Collaborated with the Mayor of Scarsdale, Village staff, the Board

Great Neck Estates Design Review

Great Neck, NY

Reviewed an application received by the Village of Great Neck Estates for a 70-unit multifamily building in the Village's downtown. The design review examined the proposal's compliance with the Village's Business Incentive Overlay District, as well as potential site improvements.

**South End Civic Campus Design
Competition Study**

Stamford, CT

Further developed a plan for a “Civic Campus” at the site of the Lathon Wider Community Center in Stamford’s South End neighborhood. Key components of the study included site analysis, community outreach, and the launch of an architectural competition.

**Centre Island Zoning Study
and Recommendations**

Centre Island, NY

Worked with Village Staff and the Board of Trustees during the Village’s temporary development moratorium to develop recommended zoning changes. Recommendations addressed environmental concerns associated with increased development on the island.

Briarcliff Manor RFEI

Briarcliff Manor, RFEI

Summarized and presented RFEIs submitted to the Village for the development of a mixed-use building with municipal services on a Village-owned parcel.

Comprehensive Plan

White Plains, NY

Created a visual layout and graphics for the oneWP Comprehensive Plan. Tasks included coordinating content, designing infographics, and visually representing data.

Hartford-Brainard Airport Property Study

Hartford, CT

Worked with the CT Department of Economic and Community Development to assess the benefits and opportunity costs to the City of Hartford and the State of Connecticut of the current and alternative uses of the Hartford-Brainard property.

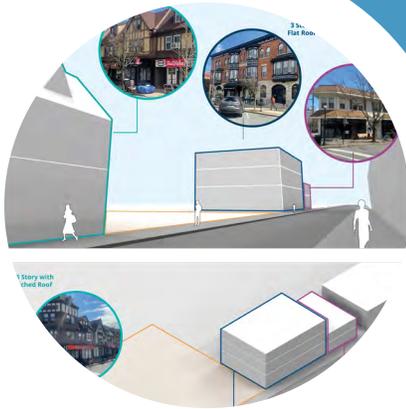

Team Experience

We know how to transform complex zoning challenges into practical, community-driven solutions that shape vibrant, sustainable futures.

The following section summarizes our team's ability to meet your needs, as it relates to the Primary Focus Areas. This is followed by example projects where we provide more detailed information, including links to the final code, technical documentation developed during the project process, and links to presentations we made.

Relevant Experience

Comprehensive Zoning Updates

FHI Studio has led or supported several comprehensive zoning updates that meet many of Haverford's primary focus areas, including but not limited to permitted use updates, new and existing definitions, zoning administration, supplemental use regulations, temporary use regulations, accessory structures, and supplemental use standards.

In **Stonington, CT**, FHI Studio is leading a comprehensive rewrite of the Town's zoning regulations. Working closely with the Town planner and zoning commission, the team is reviewing and rewriting the zoning regulations to provide regulations that are more consistent, user-friendly, easier to administer, and up to date concerning best practices, statutory changes, and case law.

FHI Studio is also working with **Fairfield, CT** to develop their comprehensive plan and update their zoning ordinance in two phases. In the first, FHI Studio has modernized and updated the regulations, so they are well organized, easy to use, and consistent with state statutes. The second phase will include more substantial updates to key sections of the ordinance to ensure that it accurately reflects the goals and objectives of the community-driven comprehensive plan.

Supplemental Regulation Updates

Regulations on signage, lighting, special uses, and protection of environmental assets have substantial impacts on development and its impacts on the community

FHI Studio has experience working with communities to develop site design standards, including required standards administered through zoning or advisory standards through the establishment of design guidelines. We have also worked with communities to move sign regulations towards a content-neutral approach in light of recent court decisions. The effective but reasonable regulation of signage, lighting, and other site features is integral to a functional zoning ordinance and we are prepared to assist Haverford in developing standards and regulations that are consistent with the community's expectations.

BFJ has a wide range of experience in refining these regulations to achieve specific goals. This work includes **Greenwich, CT**, where they recently completed a full re-write of the Town's signage and lighting regulations to improve the review process, reduce impacts, and enhance enforcement, within the confines of state and federal legal jurisdiction. In **Briarcliff Manor, NY**, they amended the Village's wetlands and steep slopes regulations to improve the protection of these resources, while in **Parsippany-Troy Hills, NJ**, we assisted the Township in ordinance revisions including regulation of short-term rentals, temporary storage units, outdoor dining, signage, mobile food vendors, and cannabis businesses. In **Pine Plains, NY**, their zoning code update included revisions for solar farms, a mixed-use industrial area, and special uses including cannabis stores. Lastly, in **Garden City, NY**, BFJ developed zoning to control adult uses, tattoo parlors, vape shops, and similar uses.

Downtown and Business Zoning

FHI Studio is working with **Oxford Borough, PA**, to update their downtown zoning as part of a comprehensive zoning update. The new ordinance includes strong form and design regulations to ensure that new development complements and supports the character of their downtown. We are also working with the **City of Danbury, CT** to update their downtown zoning regulations. The revisions will extend the Downtown Central Business District to facilitate new, higher-intensity growth while preserving Downtown's historic buildings. The objective of this project is to reshape the regulatory environment within Downtown, transforming it into a vibrant center of the City. BFJ also has extensive experience with zoning for downtowns and major commercial corridors to unlock the potential of these places and help them thrive in the face of ever-increasing competition from online retail. Recently, they completed the **Wilton (CT) Downtown Master Plan and Form-Based Code**, to facilitate a mixed-use, pedestrian-oriented environment within the Wilton Center, on the Norwalk River waterfront, and along the State Route 7 corridor. In **New Rochelle, NY**, they have been working with the City for over 10 years to unlock its development potential.

Transit-Oriented Development (TOD) Zoning

FHI Studio has nearly a decade of experience working with the **North Jersey Transportation Planning Authority** to support transit-oriented development through planning and zoning. This has included TOD zoning revisions in **Freehold Borough, Raritan Borough**, and the **Borough of Bound Brook**, among others. BFJ also has a long history of crafting zoning that supports mixed-use, walkable development around transit resources. Examples include **Mount Kisco, NY**, where the comprehensive plan update that we prepared sought to capitalize on the Village's strategic location in Westchester County along the Metro-North Harlem Line. As part of the update, we created a new downtown form-based overlay zoning code to promote contextual development, improved streetscapes, and walkability. They crafted TOD zoning for the **City of Yonkers, NY** (at the Ludlow Station on the Metro-North Hudson River Line); the **Villages of Pleasantville and Mamaroneck, NY**; and the **Town of Stratford, CT**. In each case, the zoning that BFJ developed for the communities resulted in mixed-use development at the desired scale of the communities, activating previously underutilized sites to strengthen local businesses and further vibrant streetscapes.

Residential Zoning

As detailed below, FHI Studio has also worked closely with **Media Borough, PA** to develop a hybrid form-based zoning ordinance for its residential areas. BFJ has also extensive experience in working with communities to ensure their residential neighborhoods are appropriately scaled to support the community's aesthetics and quality of life. Recently, in **Scarsdale, NY**, they worked closely with elected officials and staff to refine residential zoning to address out-of-scale homes and the environmental impacts of impervious coverage.

The resulting zoning changes, which were adopted within a development moratorium, used a multi-faceted approach to area and bulk provisions that will better control the size and placement of new homes while allowing for continued upgrades of the housing stock. In **Pleasantville, NY**, they updated the Village's residential zoning to incorporate the use of floor area ratios to control the bulk of homes. In **Greenwich, CT**, they revised the zoning for the Town's smallest-lot zone (a one- and two-family district) to address ongoing issues of building scale and aesthetics, parking, setbacks, and open space.

We have also worked with multiple communities in development of Affordable Housing Plans, which have recommended residential zoning amendments in support of affordable housing development including allowing and reducing requirement for accessory dwelling units, allowing the conversion of single-family homes to multi-family homes, and allowing mixed-use residential development in commercial-only districts.

Award Spotlight: Hartford Form-Based Code Zoning

STREET TYPES
Commercial Connector Street

9.6 Commercial Connector Street

9.6.1 INTENT
The Commercial Connector is a low to medium capacity street for medium speeds and it primarily serves businesses, many of which are large offices or auto-related. It provides multi-modal cross-town connections. Refer to the following typical proposed sections in Figure 9.6-A Typical Commercial Connector Street and Figure 9.6-C Alternative Commercial Connector.

9.6.2 GENERAL REQUIREMENTS
Commercial Connectors shall be developed using the standards in Figure 9.6-B Commercial Connector Requirements.

9.6.3 EXAMPLE COMMERCIAL CONNECTORS
Examples of Commercial Connectors include: Barbour Street, Broad Street, Homestead Avenue, New Britain Avenue, and Park Street.

COMMERCIAL CONNECTOR STREET REQUIREMENTS

Permitted Adjacent Building Types	All
Typical Right-of-Way Width	100' - 102'
ROADWAY REALM	
Travel Lanes	1 lane in each direction
Lane Width	10' - 11'
Allowable Turn Lanes	Right permitted in place of parking at intersections with arterial, left only with median alternative
Parking Lanes ¹	Parallel or angled allowed on both sides of street
Pavement Width	30' - 50'
Median	Permitted with 80' or greater right-of-way
Bicycle Facilities ²	Dedicated bike lanes or cycle track
PEDESTRIAN REALM	
Sidewalk	Minimum 6' wide clear on both sides
Buffer Area	Minimum 2' wide landscape zone or furnishings zone, adjacent to residential & OS districts, a landscape zone is required

¹ Refer to 9.2.2 for on-street parking requirements.
² Refer to 9.2.3 for bicycle facility types and requirements.

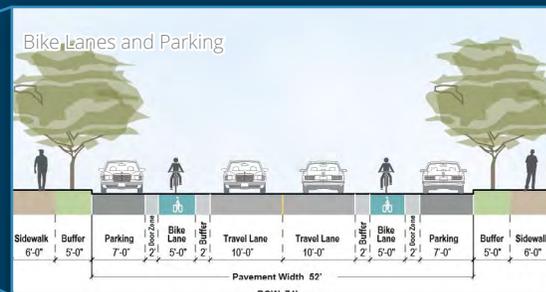

Figure 9.6-B Commercial Connector Requirements

Figure 9.6-A Typical Commercial Connector Street

Figure 9.6-C Alternative Commercial Connector

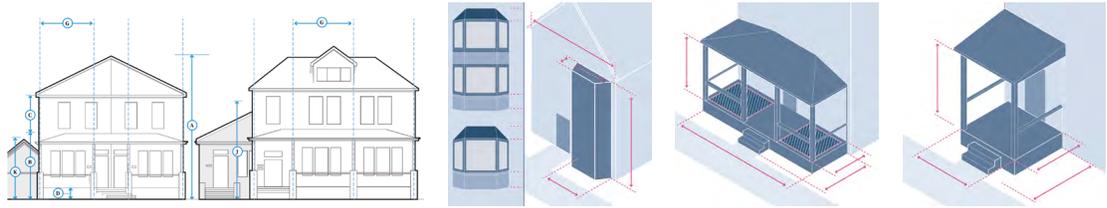

FHI Studio was a member of the team that rewrote Hartford's zoning regulations that were adopted in 2016. The regulations are a hybrid code, with traditional and form-based elements. The code has won multiple awards, including the **2020 Richard H. Driehaus Form-Based Codes Award** presented by the **Form-Based Codes Institute at Smart Growth America**.

PROJECT EXAMPLES

Media Hybrid Form-Based Code

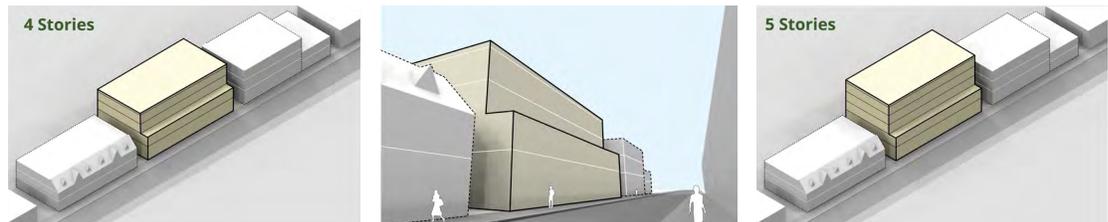

FHI Studio collaborated with the Borough of Media, PA, to create a Hybrid Form-Based Zoning Code that focuses on residential projects. The project included regulations that supported the construction of **missing middle housing** (including **accessory dwelling units**) through **context-sensitive design**. FHI Studio conducted extensive **GIS analysis**, which can be reviewed in the technical analysis below. FHI Studio created all **graphics** in the ordinance.

- **Ordinance:** [Ordinance No. 1161 of 2023](#)
- **Memorandums:** [Technical Analysis](#) and [Survey Summary](#)
- **Presentations:** [Regulations 101](#), [Affordable Housing & Zoning](#), [Steering Committee – Public Engagement Summary](#)

For more information about this project, please contact:

Brittany N. Forman, MPA, PMP
Borough Manager
Media Borough
610-566-5210 x242
bforman@mediaborough.com

Swarthmore Town Center Zoning

FHI Studio was hired to update Swarthmore's Town Center Zoning. The project included **context-sensitive design solutions** for a **mixed-use** town center, with a focus on supporting **transit-oriented development**. The updated ordinance included incentives for the inclusion of affordable housing and the construction of environmentally sustainable buildings that meet national green building standards.

- **Ordinance:** [Draft Town Center Zoning Ordinance](#)
- **Presentations:** [Engagement Summary](#) and [Technical Summary](#)
- **Supporting Documents:** [Memorandum of Findings](#), [Additional Documents](#)

kseymore@swarthmorepa.org

PROJECT EXAMPLES

Gentle Density and Missing Middle Housing Guide and Technical Assistance for NJ TRANSIT Villages

For more information about this project, please contact:

Megan Massey
 Director, Transit Friendly Planning
 NJ TRANSIT
 973-491-7359
 MMassey@njtransit.com

FHI Studio is currently working with NJ TRANSIT to develop the Gentle Density and Missing Middle Housing: A Guide for New Jersey Communities. The guide includes recommendations on how

to plan and zone for missing middle housing and includes guidance on context-sensitive solutions. In 2025, FHI Studio will be providing technical assistance to two municipalities that are looking to update their zoning following the guide. [A draft of the guide can be found here.](#)

Additional Examples

- [Village of Briarcliff – Steep Slopes and Wetlands](#)
- [Town of Greenwich – Signage Regulations](#)

Note: The images below are intended as illustrative examples of aesthetically strong signage in examples from Greenwich. Nothing in these images is meant to endorse a particular business.

Example 1: This signage program makes every effort to complement rather than compete with the architectural character of the building. The typeface is simple and set tastefully (and minimally) on the sign band above the entrance (right-hand photograph). In the left-hand photo, the sign is proportioned to fit within the architectural bay of the building. Here, the business name is presented as a composition of pin-mounted, individual letters (non-illuminated), while the remainder of the sign employs a solid background surface only to the bare minimum necessary to communicate additional information. It is notable also that the solid background color matches that used elsewhere in the building's architectural design. These efforts result in an attractive balance where the signage enhances the building's simple industrial architecture.

Example 2 and 3: These photographs illustrate two desirable ways to accommodate signage on a traditional building frontage. On the left-hand, the storefront facade is comprised of painted millwork with transom windows. The signage is simply but attractively designed, comprised of high-quality materials, and placed purposefully in the brick signband as part of the building. The second example (right-hand photograph) extends the storefront millwork above the transom windows (hidden here by the awning) to create a stronger visual connection between the sign and storefrontage, and incorporates a sign band for signage placement. Both signs are non-illuminated.

Example 4: This signage program is composed of well coordinated elements, including a high-quality sign that is well placed above the main entrance, low lumen scene lighting and awnings that complete the ensemble. The awnings are color coordinated with the signage with simple lettering on the valance only.

Example 5: This row of shops illustrates a desired approach for coordinating signage across a series of commercial facades. The signs are simply designed with non-illuminated black acrylic lettering placed on a clean painted white background. Variation is expressed through the careful use of a range of typeface styles. Note that all lettering is approximately the same height and similarly placed on their respective sign bands.

We Can Deliver For You. Just Ask Our Clients.

Listed below are client references who have worked with FHI Studio for years on a wide range of successful assignments. We strongly encourage you to reach out to them to find out why.

Brittany N. Forman, MPA, PMP

Borough Manager

Media Borough

610-566-5210 x242

bforman@mediaborough.com

Ms. Forman can speak to FHI Studio's work as prime consultant for the **Media Hybrid Form-Based Code** (2021 – 2022). FHI Studio is currently developing a comprehensive, cohesive, modern, and clear set of zoning regulations for the Borough.

Mr. White can speak to FHI Studio's creative planning, our ability to communicate complex ideas and facilitate meaningful dialogue, particularly on the **Radnor Comprehensive Plan** (2023 – Ongoing).

Media Form-Based Code

FHI Studio, now IMEG collaborated with the Borough of Media, PA, to create a Hybrid Form-Based Zoning Code that focuses on residential projects. The code is well-illustrated, streamlined, clearly written, and rooted in the community's values and goals. FHI Studio led an extensive community engagement process that included walking tours in the community, workshops, and sit-down sessions. This helped us defined the key characteristics that contributed to making Media special. Media adopted the code in 2023.

1. Main Body	Min	Max	2. Building Elements	
Bulk			A Attached Side Garages	P
(A) Main Body Height (floors/feet)	--	2.5 Stories / 33'	B Awnings	P
(B) Ground Floor Height	10'	--	C Balcony	NP
(C) Upper Floor Height (feet)	9'	--	D Bay Window	NP
(D) Finished Floor Elevation (inches)	18"	--	E Dormers	P
Massing and Composition			F Porches	R
E Roof Pitch (Rise:Run)	4:12	12:12	G Stoops	P
F Number of Bays	2	--	3. Roof Types	
(G) Bay Width (Feet)	7'	25'	H Gabled	P
H Transparency, Street Facing Façades	25%	--	I Gambrel	NP
I Transparency, Non-Street Facing Façades	15%	--	J Hip	P
Secondary Structures			K Flat	NP

Swarthmore Town Center Zoning Update

FHI Studio, now IMEG was hired to update Swarthmore's Town Center Zoning after a major redevelopment in the Town Center that resulted in a divisive approval process. Utilizing a survey and Every Door Direct Mailer (EDDM), FHI Studio engaged approximately 12% of households (450 responses) in the project. FHI Studio also hosted an open house with more than 70 attendees. At the open house and Borough Council meetings, FHI Studio worked with the community to balance competing needs and visually understand the impact of zoning changes. The revised zoning ordinance includes provisions on inclusionary affordable housing, green building design, and historic protection.

Oxford SALDO and Zoning Update

FHI Studio, now IMEG is an integral member of the project team for the Oxford SALDO & Zoning Update project, funded by the DVRPC's Transportation and Community Development Initiative (TCDI) program. This project involves crafting a new Subdivision and Land Development Ordinance (SALDO) and Zoning Ordinance to align with and support the recommendations of Oxford Borough's Comprehensive Plan, currently in development. Our primary role focuses on form-based zoning, creating design-focused regulations that promote walkability, mixed-use development, and a vibrant streetscape. Through this approach, FHI Studio, now IMEG helps translate the vision of the Comprehensive Plan into practical and effective zoning tools, fostering sustainable growth and community cohesion.

Missing Middle Housing Guide and Technical Assistance

FHI Studio, now IMEG is leading the development of a guide that will support municipalities looking to encourage more missing middle housing, especially in the State's Transit Villages. The guide includes an overview, a history of residential development in New Jersey, and 10 (ten) illustrative examples. The guide also provides guidance on planning and zoning for missing middle housing, including suggestions on how to conduct spatial and statistical analysis, how to consider equity and historic preservation, and approaches to engagement. The guide includes a model Accessory Dwelling Unit Ordinance that communities can adapt to their needs. FHI Studio is also providing technical assistance to three municipalities that are looking for planning and zoning support in implementing the guide.

Downtown Danbury Zoning Study

FHI Studio, IMEG is the prime consultant tasked with updating the City of Danbury's Downtown zoning regulations, as recommended by the recently completed *Innovate! Danbury 2023 Plan of Conservation and Development (POCD)*, also prepared by FHI Studio. The POCD suggests that the City should consider and potentially take action to extend the Downtown Central Business District, as recommended by the 2019 Downtown Danbury Transit Oriented Development (TOD) Study. This extension aims to facilitate new, higher-intensity growth while preserving Downtown's historic buildings.

The objective of this project is to reshape the regulatory environment within Downtown, transforming it into a vibrant center of the City. The zoning regulations we are preparing will be guided by the vision of Downtown established by the TOD Study and POCD. They will be designed to be flexible, easy to administer, and user-friendly. FHI Studio is also spearheading a comprehensive community engagement effort to enhance the overall initiative.

Downtown Vision Plan & Redevelopment Ordinances

FHI Studio, now IMEG was a member of a multidisciplinary planning team working with the North Jersey Transportation Planning Authority (NJTPA) on transit-oriented development plans for three New Jersey communities, including Freehold Borough.

The vision plan for Downtown Freehold included land use, economic development, and mobility recommendations. The plan was accompanied by three regulatory documents:

- Updated land use regulations for the Borough's downtown area, including specific design guidance.
- Two special-area zone, including a Transit Oriented Development Zone. Each set of plans included conceptual site plans and renderings illustrating the public's vision for the area and a set of flexible, form-based regulations to guide future development.
- A set of historic rehabilitation and storefront design guidelines to preserve the character of Freehold's historic Main Street.

Fairfield Plan of Conservation & Development and Zoning Regulations Updates

FHI Studio, IMEG is the prime consultant for the Town of Fairfield Plan of Conservation and Development and Zoning Regulation Updates. The project includes three tasks:

1. Update the POCD to identify community goals, strategies for implementation, and necessary zoning amendments to advance the Town's vision.
2. Modernize and update the regulations so they are well organized, easy to use, and consistent with state statutes. This includes updating definitions and adding graphics to aid usability.
3. Make substantial updates to key sections of the ordinance to ensure that it accurately reflects the goals and objectives of the community-driven POCD.

FHI Studio is currently in the process of developing the POCD and getting approval on the modernized zoning ordinance. At the conclusion of that work, FHI Studio will begin work on the substantial updates.

PLANNING ADVISORY SERVICES

Greenwich, CT

Neighborhood Plans

Over a period of several years, the Town of Greenwich, Connecticut retained BFJ Planning to create neighborhood plans for several areas within Greenwich that developed as distinct communities. For each of the three plans, the most recent of which was adopted in 2017, the process included working closely with the public to ensure that recommendations reflected the goals of the residents and the Town. For Cos Cob, substantial attention was dedicated to existing urban design conditions and the plan presented a variety of strategies to improve the character of the “Hub” and the Route 1 corridor in order to promote a more attractive and pedestrian-friendly environment. For Eastern Greenwich, key issues identified included enhancing the Old Greenwich business area, addressing issues of out-of-scale residential development, and increasing public access to the Mianus River. For the Glenville/Pemberwick area, the focus was on improving two important community assets: Glenville Green and Pemberwick Park, including establishing a stronger connection to the Byram River.

Plan for Glenville Green improvements

R-6 Zoning Advisory

In 2004, BFJ assisted the Town of Greenwich planning staff in its study of the R-6 zone, which includes most of the older, well-established neighborhoods of the Town, developed historically along the post road (U.S. Route 1) and the New Haven line of the Metro-North Railroad. New construction that was out of scale or context with historic development patterns led to a re-evaluation of area and bulk standards, as well as the creation of new standards such as total impervious coverage. More recently, in 2015, BFJ undertook additional analysis on the R-6 zone to address ongoing issues of building scale and aesthetics, parking, setbacks and open space, as well as to ensure that development standards are not overly restrictive to property owners.

Signage and Lighting Study

BFJ worked with representatives of Greenwich’s Planning and Zoning Commission and Architectural Review Committee on a comprehensive update of the Town’s signage and lighting regulations. The work, completed in 2024, includes revisions to ensure compliance with recent case law and State statutes, as well as to improve the review and approvals process and enhance enforcement. As part of the project, BFJ prepared a set of signage design guidelines to identify best practices for high-quality, contextual signage in Greenwich.

PLANNING ADVISORY SERVICES

Pleasantville, NY

BFJ has worked closely with the Village of Pleasantville for over a decade on a series of development projects and planning initiatives to activate its downtown while preserving the strong neighborhoods and quality-of-life that make the Village an attractive destination in Westchester County and the greater New York City metropolitan region.

Development Review (2013-15)

BFJ was retained by the Pleasantville Board of Trustees to review two significant development applications: a 72-unit townhome development proposed by Toll Brothers for a former office park north of the downtown, and an 87-unit assisted-living facility proposed by Benchmark Senior Living adjacent to a residential neighborhood in the southern portion of the Village.

BFJ reviewed the requested zoning text changes and site development plans for each proposal, identifying issues such as site access, traffic and parking, and fiscal and community services impacts. As part of this review, BFJ prepared alternative conceptual plans, which led to changes that addressed the Village's concerns. For the Toll Brothers project, where the zoning proposal was ultimately approved by the Trustees, BFJ subsequently provided planning review services to the Planning Commission as part of its site plan review process. The project was approved and constructed.

Master Plan Update

Master Plan Update (2016-17)

The Board of Trustees also retained BFJ to update its Master Plan, with a primary focus on the Central Business District. The Village was interested in building on the economic development potential of key downtown assets such as its Metro-North train station, the Jacob Burns Film Center, and municipally owned land, while preserving Pleasantville's small-scale character and quality of life. Key recommendations included downtown zoning revisions and intersection improvements to enhance walkability and create new public open space.

Grant Writing Assistance (2016)

BFJ assisted the Village in preparing a Transportation Alternatives Program (TAP) grant application to fund intersection improvements along key downtown corridors, as recommended in the Master Plan Update and prior studies. The application was successful, and the Village was awarded a \$1.5 million grant to implement pedestrian and streetscape improvements. A key outcome of the project is the opportunity to create a pocket park at Memorial Plaza, the focal point of downtown Pleasantville adjacent to the train station. Final designs for both the intersection improvements and the civic space are underway.

Conceptual Design of Memorial Plaza Civic Space

Project Understanding and Approach

Your Vision, Our Expertise

Our approach as outlined in the following scope of services is based upon our experience working with multiple communities to develop effective zoning code updates.

Haverford Township's vision, outlined in recent planning efforts, demonstrates a strong commitment to a sustainable, community-centered future. The FHI Studio team is well-prepared to help Haverford achieve this by developing a zoning ordinance that strengthens neighborhood cohesion, enhances walkability, and supports new opportunities for transit-oriented and mixed-use development. Our approach will prioritize integrating elements that make Haverford a place for all generations and lifestyles, ensuring that future growth aligns with Haverford's commitment to balancing tradition with progress. By embedding climate-conscious standards into the zoning code, such as incentives for renewable energy installations and requirements for green infrastructure, the FHI Studio team will create a zoning ordinance that actively supports Haverford's sustainability and resilience goals. Likewise, we will work closely with you, the residents, and stakeholders to ensure that zoning provisions facilitate a multi-modal network that provides access to parks and natural spaces, encouraging sustainable and active transportation options.

"Haverford will become an even more vibrant community, with a variety of highly livable and safe residential neighborhoods, strong institutions, and great parks and trails. Haverford Township will guide development and redevelopment to protect residential neighborhoods and to carefully manage traffic. An emphasis will be placed upon strengthening existing older business areas to create a stronger sense of place, while improving their functionality and appearance."

— Excerpt from Haverford Township 2022 Comprehensive Plan

Current Zoning Challenges

Haverford's current zoning ordinance presents several challenges that limit its effectiveness, including outdated language, lack of cross-referencing, and inconsistencies that make it difficult for stakeholders to navigate and apply. To address these issues, FHI Studio will implement user-friendly language, an accessible organization, and adaptable provisions to facilitate commercial revitalization while reinforcing neighborhood character and advancing sustainability goals.

In addition to comprehensive, ordinance-wide updates, FHI Studio will work with the Township to focus on specific priority areas to address Haverford's distinct needs. Based on a review of previously planning documents, we anticipate including the following:

- **Eagle Road Corridor:** We will prioritize zoning updates for the Eagle Road corridor between Hillcrest Avenue and Darby Road to enhance its potential as a vibrant, pedestrian-friendly commercial district. This transformation aims to foster a "Town Center" atmosphere that is both functional and visually appealing.
- **New Neighborhood Commercial/Residential District:** FHI Studio will explore the creation of a new zoning district to support neighborhood-scale commercial areas, including provisions for upper-story apartments. This district will strengthen the market for local businesses while providing housing options that enhance community vitality.
- **Enhanced Standards for Commercial Corridors and Transit Lines:** To support dynamic, mixed-use areas along commercial corridors and near transit, FHI Studio will develop flexible standards for development and redevelopment. These provisions will encourage a compatible blend of uses, creating walkable, transit-oriented environments that attract businesses and residents alike.
- **Context-Sensitive Residential Development:** FHI Studio will introduce zoning approaches that promote a range of residential types, such as "missing middle" and multifamily housing options, supporting diverse housing needs within a context-sensitive framework that respects neighborhood character.

Our team will work to ensure that these targeted updates, along with broader ordinance enhancements, align with Haverford's goals for a cohesive, resilient, and community-centered township.

Community Engagement

A zoning ordinance that reflects community values requires a process rooted in meaningful engagement. FHI Studio will lead an inclusive, community-centered engagement strategy that captures a diversity of resident and stakeholder input, ensuring the ordinance aligns with local priorities. Building on the successful engagement models we used in

projects like the Media Hybrid Form-Based Code and the Radnor Township Comprehensive Plan, our approach in Haverford will involve public workshops, digital surveys, and stakeholder meetings tailored to ensure accessibility and transparency. We will work closely with the Board of Commissioners, a Steering Committee, and other key stakeholders to incorporate their insights into every phase of the zoning rewrite. This responsive process will ensure that the final ordinance not only aligns with statutory requirements but also reflects Haverford's distinct community identity.

Project Approach

FHI Studio proposes a systematic, four-stage approach to updating Haverford Township's zoning ordinance, ensuring a transformation from the current framework to a modern, intuitive, and effective regulatory tool. This approach builds on our success in communities such as Stonington, CT and Fairfield, CT, where a staged process allowed robust community engagement in a zoning code that introduced user-centered ordinance language, addressed outdated code elements, and aligned regulations with contemporary planning goals.

The FHI Studio Team's primary objectives for Haverford's zoning rewrite include a focus on the Primary Focus Areas identified in the RFP. This shall include, but not be limited to:

- **Supporting Comprehensive Planning Goals:** Our zoning update will directly implement priorities from the Climate Action Plan, PROS Plan, and other township policies by promoting green building practices, integrating resilience standards, and aligning with connectivity goals. This approach will echo our work in Fairfield, CT, where zoning revisions supported mixed-use, walkable communities that facilitated local goals for environmental stewardship and enhanced connectivity.
- **Enhancing Usability and Accessibility:** By employing best practices in code organization and clarity, The FHI Studio Team will create a zoning document that is accessible and intuitive for all users. The use of clear cross-references, graphical aids, and simplified language will make the ordinance a practical tool for residents, developers, and township officials alike.
- **Developing Proven State-of-the-Art Standards:** The FHI Studio Team will introduce standards that address modern development needs. This may include developing standards for inclusive zoning, mixed-use development, climate resilience, transportation-oriented development, (hybrid) form-based codes, historic preservation, and design regulations. These standards will be informed by best practices and tailored to Haverford's specific goals. Our experience with similar zoning updates, such as in Media Borough, PA, Raritan, NJ, and Oxford, PA has equipped us to create forward-thinking, context-sensitive regulations that facilitate sustainable growth while respecting local character.

Stage 1: Project Coordination and Community Engagement

In this foundational stage, FHI Studio emphasizes clear project coordination and broad community outreach. It begins at the start of the project and continues through to adoption. At its foundation is a program of communication with Township staff, the Steering Committee, and the Board of Commissioners that ensures that the project meets Township objectives and is delivered on time and within budget.

Building on this foundation, FHI Studio will execute a strategy of resident, business, and stakeholder engagement that informs and guides the zoning update. Local stakeholders and the public have a critical role to play in the successful implementation of the Plan's elements, and the FHI Studio Team understands the importance of early, thoughtful, and continued engagement with a wide array of stakeholder groups. FHI Studio employs proven engagement strategies, including interactive online workshops and in-depth stakeholder focus groups, which lead to meaningful input. For example, we gathered more than 3,350 comments from 600 participants in Radnor Township as part of their Comprehensive Planning process. Our zoning work in Swarthmore Borough, FHI Studio got input from approximately 12% of households (450 responses) in the Borough on a survey.

Our focus on inclusivity ensures that we reach all demographic segments of the Borough, particularly those who are traditionally underrepresented in planning processes. The following details our approach to community and stakeholder engagement. Our proposed scope of work is detailed in the Public Outreach Plan section of the proposal.

- **Accessible and Multi-Faceted:** Anyone who wants to participate in the plan will be encouraged to do so. Activities will be designed to facilitate both in-person and online participation. The FHI Studio Team, in collaboration with the Borough and Steering Committee, will go out to the community to encourage people to participate.
- **Inclusive:** The Project Team worked closely with the Borough to create a process that allows and encourages people to participate, regardless of their background, socio-economic status, and language preference. This included specific efforts to reach out and engage with residents who do not traditionally participate in planning efforts.

We feel SEEN! Thank you so much for your work on this. **This truly reflects the feedback from stakeholders and ultimately the whole neighborhood.** I really look forward to seeing the implementation of this plan and supporting however we can.

Chelsea Carter

Vice President

Sgt Anthony Park Neighborhood Association
Jersey City Small Area Vision Plans

- **Responsive:** The outreach process will be designed so that participant input is reflected in the Plan. From project initiation through plan development, community input will play an important role in establishing the topics for investigation and the Plan’s recommendations.
- **Transparent:** Anyone interested in the project will be able to clearly understand the process for developing recommendations and how they can participate. This included sharing information online and in person. The goal will be to establish an open, honest, and transparent dialogue that builds the foundation for implementation.
- **Meaningful:** Participants will be able to provide input at every critical stage of the plan development process. Goals, strategies, and action will arise out of the public and stakeholder engagement process and participants will have an opportunity to review, comment, and support the refinement of all elements of the Plan.

Stage 2: Zoning Ordinance Reformatting and Initial Updates

In this stage, The FHI Studio Team will conduct a thorough review of the current ordinance and implement structural improvements to create a clear, organized, and user-friendly document. Initial updates will address outdated language and layout, setting the foundation for more substantive revisions and aligning the ordinance with Pennsylvania statutory requirements.

At the end of this phase, the Township will have a reformatted document where the key functional issues are addressed. This will ensure that a solid, working model of the regulations is adopted promptly. During this phase, we will also ensure that the Regulations are compliant with recent statutory changes.

Stage 3: Substantive Ordinance Revisions

In Stage Three, the FHI Studio Team will incorporate comprehensive revisions tailored to Haverford’s planning objectives. We will integrate new standards for priority areas—such as mixed-use districts and sustainable development—while refining ordinance language through public feedback. This phase will culminate in the adoption of a zoning ordinance that supports Haverford’s long-term vision. This phased approach ensures a systematic, inclusive, and responsive process, resulting in a zoning ordinance that is practical, compliant, and aligned with Haverford’s goals for growth and sustainability.

Stage 4: Finalization and Adoption

In the final stage, the FHI Studio Team will engage in a final round of revisions and feedback with Township staff. This collaborative process will allow us to address any outstanding issues based on staff insights, ensuring it addresses Haverford’s specific needs and aligns with community values. Our team will then support Haverford Township in navigating the public hearing process, ensuring materials are accessible and that community members understand the ordinance’s impact. Through well-structured presentations and thorough responses to public questions, we will facilitate a smooth and informed adoption process.

Scope of Services

Stage 1: Project Coordination and Community Engagement

Task 1.1: Project Coordination

The FHI Studio Team will conduct monthly project management calls with the Town’s project manager (“Project Manager”) throughout the project. Calls will be 30 minutes and focus on project updates.

Task 1.2: Steering Committee

The FHI Studio Team will work with the Project Manager to identify membership of a Steering Committee that is comprised of representatives from Township Staff, the Township Planning Commission, the Zoning Hearing Board, and the Board of Commissioners. We will advise on whether other community stakeholders (such as residents or business owners) should be included.

The FHI Studio Team will conduct up to ten (10) virtual working sessions with the Steering Committee through the duration of the project as required to advance the project. Sessions will be up to an hour in length. In addition, The FHI Studio Team will conduct up to four (4) in-person meetings of the steering committee at key milestones in the project. Sessions will be up to two hours in length.

The FHI Studio Team will set meeting agendas and will provide a summary of actionable items and decisions made. The FHI Studio Team will not record meeting minutes. The Town will schedule meetings, issue meeting invites, and post required notices. The purpose of these sessions will be to share findings with the Committee and make decisions regarding the update. These sessions will be used for the following purposes:

- Identify areas of concern
- Direct prioritization of regulatory topics
- Direct policy decisions for regulatory changes
- Provide institutional knowledge of past practices and regulatory changes; and
- Advise on how regulations should be administered

Task 1.3: Public Involvement Plan

Educating, informing, and hearing community members continuously throughout the code update process is paramount for success as it builds credibility and ensures the project meets the community’s needs. Local officials and stakeholders in the community are the real experts when it comes to identifying the challenges and constraints of the Township and must remain central to a successful code update process.

At the onset, we will prepare a Public Involvement Plan (PIP) that identifies activities and tools to ensure the community understands the zoning issues, opportunities, and options for change. The plan will outline a strategy to inform and engage the community, solicit meaningful input, and build consensus among key stakeholders. Our team will work with the Project Manager and Steering Committee to select the most appropriate activities. Summaries of our suggested community engagement efforts and methods are described in the following tasks.

Task 1.4: Stakeholder Engagement

Board and commission members, community organizations, business owners, major landowners, developers, and real estate agents are great resources to understand what is and is not working in the current ordinance because they are the ones who most frequently utilize it. The FHI Studio Team will conduct up to 10 (ten) virtual stakeholder meetings or in-person meetings over two days. We will work closely with the Project Manager and Steering Committee to identify appropriate participants.

Task 1.5: Web and Social Media Outreach

We will develop a standalone website to establish communication channels with the public regarding the project. Our team will provide content for the site and maintain it throughout the project. This will include the schedule, milestones, deliverables, meeting dates, a survey, and a comment form to solicit feedback. It will also include a library that includes all drafts, presentation recordings, and other materials produced during the rezoning effort. For an example of a current project website, see www.radnor2035.com.

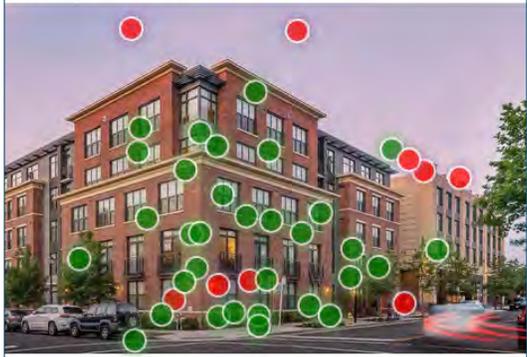

Task 1.6: Community Survey

The FHI Studio Team will prepare an online survey for the Zoning updates process. This survey will allow participants to assess community goals, identify priority issues and opportunities, and express preferences for change (or preservation). Among other elements, the Survey will include a visual preference section that will inform the context-sensitive design solutions. We anticipate this survey to align with the substantive update identified in Stage 3. The findings from the survey will be delivered as a presentation to the Steering Committee (Task 1.2) and a Joint Session of Boards and Commissions (Task 1.9).

Task 1.7: Every Door Direct Mailer

FHI Studio will develop and distribute Every Door Direct Mailer to up to 5,000 residential and business addresses in the Township to advertise the survey. This has been a proven approach to expand awareness of the project and drive participation, especially amongst those who are not “plugged into” the Township (they are not on the Township’s email list, do not attend meetings, and/or are not active in civic associations). We will work with the Project Manager to identify postal routes to maximize participation.

41 Comments | 🟢 78% | 🟡 22%

- 🟢 A building setback above the 3rd floor will help diminish the bulky feel of buildings that are 5 stories tall.
- 🟢 Incorporating cornices, brackets and other traditional facade features will help keep the street scape feeling intimate.
- 🟢 Modern yet in keeping with history of the area. My favorite
- 🟢 Interesting use of materials and setbacks. Cookie-cutter in its own way, but not bad. Fits in well with the urban fabric.
- 🟢 Greenery at sidewalk level--creates an inviting atmosphere.
- 🟢 breaking up the corner is helpful here to prevent the building from being overpowering, but 5 stories is too tall here.
- 🟡 5 floors are too many
- 🟢 substantial planting always a good thing.
- 🟢 planted areas between street and sidewalk to collect runoff and provide a buffer between pedestrians and cars.
- 🟢 Historic but new
- 🟡 Too high

A Vision For Radnor 2035

Radnor Township is updating its Comprehensive Plan!

The Comprehensive Plan, A Vision for Radnor 2035, acts as a roadmap for Radnor’s next decade and beyond. It serves as the foundation for policy and investment decisions and lays out goals and strategies for all facets of life in the Township. The Plan will address a wide range of topics, including, but not limited to:

- Open Space, Trails, & Recreation
- Stormwater Management
- Neighborhood Conservation
- Economic Development
- Community Resources
- Housing Diversity & Affordability
- Mobility & Connectivity
- Institutional Relations
- Historic Preservation
- Environmental Protection & Sustainability

Radnor2035.com

➔ See the back for ways to get involved!

Task 1.8: Walking Tours

The FHI Studio Team will provide one staff person to conduct three (3) walking tours lasting up to two (2) hours each on the same day. Walking tours will be limited to ten people, although should the Township provide additional staffing assistance, the number of participants could be expanded. The goal of the walking tour will be to conduct an on-the-ground assessment of conditions in key areas to inform the context-sensitive design solutions. We anticipate this survey to align with the substantive update identified in Stage 3. The findings from the walking tour will be incorporated into the presentation of survey findings (Task 1.5).

Task 1.9: Public Meetings & Workshops

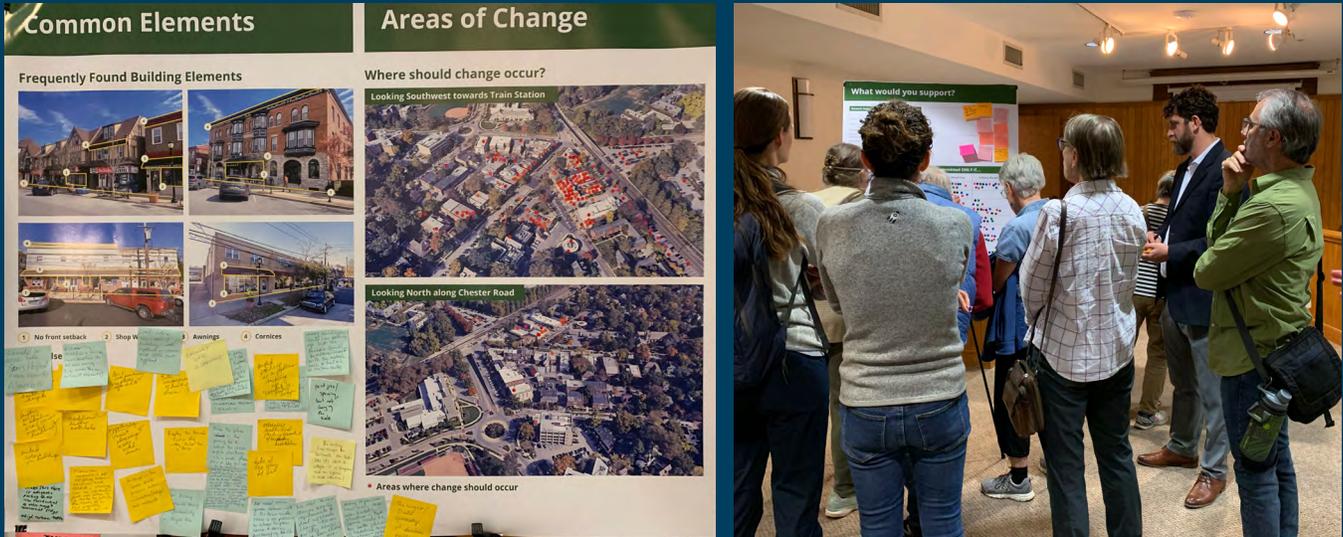

Throughout this process, we anticipate holding two (3) public workshops or meetings.

We have multiple methods and tools available to use at the workshops, including presentations and Q&A, design charrettes, real-time polling, visual preference surveys, interactive display boards, sticker-dot voting, round-table discussions, and design exercises. Our team will work with the Project Manager and Steering Committee to select the most appropriate format and tools. We recommend the following events:

- **Land Use Regulations 101:** An initial “Land Use Regulations 101” presentation will serve as a foundation for the project, informing people about the various aspects of zoning and how they relate to Township goals. This will also be an opportunity to introduce participants, including elected and appointed Officials, to zoning and contemporary techniques such as (hybrid) form-based zoning, building typologies, and design standards, as well as examples of the different levels of control that are available within each tool.
- **Context-Sensitive Design Workshop:** At the outset of Stage 3, the FHI Studio team will conduct one highly collaborative workshop during which residents and stakeholders can assist in the development of context-sensitive design solutions. This may include identifying key design characteristics of different neighborhoods or zones and exploring key form elements for commercial or mixed-use areas. Participants will build off and refine the information gathered in the visual preference survey. The findings from this presentation will be presented to the Steering Committee and incorporated into a Presentation to a Joint Session of Boards and Commissions (Task 1.10)

Media Form-Based Code Zoning Workshop & Community Feedback

- **Recommendations Open House:** Before drafting the zoning ordinance in Stage 3, the FHI Studio team will conduct one open house where we present the top-level zoning framework. This will include information on the use, bulk, form, and design standards for each district. Participants will have an opportunity to provide feedback, ask questions, and make suggested changes.

Task 1.10: Public Presentations to Join Session of Boards and Commissions

FHI Studio strongly recommends that the Township hold joint sessions of the Board of Commissioners, Zoning Hearing Board, and Planning Commission at five (5) critical stages in the project:

- **Stage 1:** Project Initiation & Land Use Regulations Overview
- **Stage 2:** Proposed Structure and Recommended Updates
- **Stage 3:** Initial Engagement Summary (Survey Findings)
- **Stage 4:** In-Depth Zoning Diagnosis
- **Stage 5:** Proposed Substantive Changes

We anticipate that members of the steering committee will be responsible for keeping their respective boards and commissions apprised of project progress in between these substantive check-in points. If a joint session is not feasible, FHI Studio will work with the Township to record and distribute the presentation to all parties.

Stage 2: Zoning Ordinance Reformatting and Initial Updates

Task 2.1: Review Relevant Plans, Regulations, and Documents

We will review the draft Comprehensive Plan and related maps (2024), Climate Action Plan (2021), Safety Action Plan (2024), Parks Recreation and Open Space Plan (2024), and Fire and Emergency Medical Services Analysis (2023), and other relevant documents and provide a summary report of implications for the Regulations. The goal of this task will be to synthesize all prior recommendations and related content that have implications for the Building Zone Regulations.

Task 2.2: Line-by-Line Review of Building Zone and Subdivision Regulations

The FHI Studio Team will initiate a comprehensive diagnostic review of the existing zoning ordinance, carefully analyzing each section to identify outdated provisions, inconsistencies, and areas that require reorganization. We will conduct a line-by-line review and markup of the Zoning Ordinance and Subdivision and Land Development Regulations (SALDO) (“Land Development Ordinances” or LDOs) noting errors, omissions, inconsistencies, statutory conflicts, and other deficiencies. Our review will include an identification of potential regulation amendments as may be required by recent statutory changes. Meeting with the Steering Committee, Township Staff, and stakeholders will help to inform this effort.

This task will conclude with a presentation to the Steering Committee that outlines our diagnosis of the zoning ordinance and recommendations regarding how to address key issues.

Task 2.3: Document Formatting Revisions

We will present the Committee with options for a recommended format and nomenclature for the LDOs. This work will be informed by discussions

regarding the Township’s desired approach for context-sensitive design solutions and whether the updated code will include form-based and/or design standards. At this early stage, we will work with the Township to identify appropriate formats for creating, editing, and delivering the final ordinance. We will work with the Project Manager to connect with ecode360 to understand the level of effort and cost associated with updating the ordinance on their site.

We will incorporate best practices in zoning code structure, laying the groundwork for a well-organized, user-friendly document. Our team will focus on creating a logical, accessible ordinance layout, with clear cross-references, definitions, and interactive elements that improve navigation and usability for all stakeholders. We will identify the location for visual aids such as summary tables, zoning maps, and graphic illustrations that will clarify complex regulations, making them more comprehensible for users at all levels.

At the conclusion of this task, we will present the Township with an ordinance outline with the recommended format and nomenclature. This outline will be the template for all subsequent work.

Task 2.4: Revised Definitions

Definitions are an operative component of zoning regulations and should be complete, clear, up-to-date, and unambiguous. We will review the definitions in the LDOs and will provide recommended amendments and additions to the definitions.

Task 2.5: Use Summary Table

We will develop and review the use summary table and will provide formatting improvements and other updates to the table as needed. In addition, we will identify where the current set of permitted uses should be modernized and suggest revisions. This task may include the addition or modification of definitions and thus will be coordinated with Task 2.4.

Principal Use Summary Table: Residential Zones

The table below indicates the permitted principal uses in Stonington by residential zone. Uses are permitted by Zoning Permit (ZP) or by Special Use Permit (SUP). Uses prohibited within a zone are identified by a dash (—). See Section 15 for plan and permit requirements. In addition to the permit requirements identified below, see Section 5.3 and other applicable sections for regulations specific to the uses identified below.

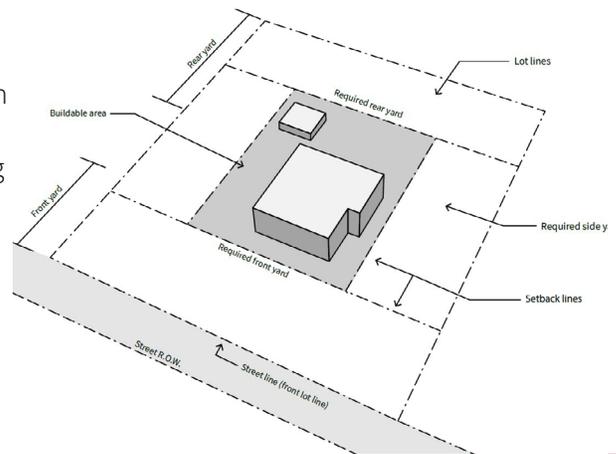

Principal Use	Residential Zone								
	GBR-130	RC-120	RR-80	RA-40	RM-20	RM-15	RH-10	RA-20	RA-15
Attached Housing	—	—	—	—	SUP	SUP	SUP	—	—
Agriculture or Aquaculture	ZP	ZP	ZP	—	—	—	—	—	ZP
Bed and Breakfast Facility	SUP	SUP	SUP	SUP	SUP	SUP	SUP	—	—
Boating Facility	—	SUP	SUP	SUP	SUP	SUP	SUP	SUP	SUP
Cemetery, Crematorium, or Funeral Home	—	—	SUP	SUP	SUP	SUP	SUP	—	—
Church or Place of Worship	—	—	SUP						

Task 2.6: Area and Bulk Regulations

Our team will develop a table summarizing the bulk regulation in each zone and review them with the Township. We do not anticipate substantial modifications to these standards during Stage 2. Instead, this table will make it easier to understand the difference between different zones and expedite review and modifications in Stage 3.

Task 2.7: Graphic Modification

Our team will identify where comprehension could be improved through the development of enhanced graphics that communicate physical concepts such as lot requirements, building requirements, site design, and the like. Graphics will be simple and will be presented in plan, section, and/or perspective formats as required to convey necessary information. Where appropriate, this task will extend into Stage 3. Our team will provide up to twenty (20) new or revised graphics.

Bristol Zoning Regulations Graphic

Task 2.8: Update and Reformat Regulations

Our team will import the existing LDOs into the preferred format. We will correct errors, omissions, inconsistencies, statutory conflicts, and deficiencies as noted above. The document may include placeholders for sections that will be developed in Stage 3. The document will be searchable with hyperlinks and bookmarks throughout that allow for easy navigation and cross-referencing.

We will also make one presentation to the Steering Committee and to a Joint Session. (Task 1.10)

Stage 3: Substantive Ordinance Revisions

Task 3.1: In-Depth Analysis

In this task, the FHI Studio Team will analyze the merits and shortcomings of the current code and diagnose what provisions do not align with the vision, goals, and recommendations identified in the plan review process (Task 2.1).

With the support of GIS mapping, spatial analysis, and design sketches, we will evaluate the built environment, including uses, density, buildings, streetscape, parking, and mobility, to help the project team understand the existing development patterns. This technical analysis will focus on identifying how the current zoning ordinance supports, or contradicts, the Township goals for each zone. This may include identifying and mapping:

- Zones where the current permitted uses in the ordinance do not align with the goals for the area.
- The location and extent to which the zoning ordinance produces non-conforming lots and structures.
- The extent to which current zoning matches existing land use (non-conforming use analysis)
- Where and how zoning may encourage redevelopment.
- The degree to which the current zoning would produce predictable results.
- Where inclusionary zoning may be most effective.
- How zoning supports (or detracts from) creating a multi-modal mobility system, including transit-oriented development.

Media Form-Based Code Zoning Lot Diagrams

Figure 5. Distribution of lot sizes (R2)

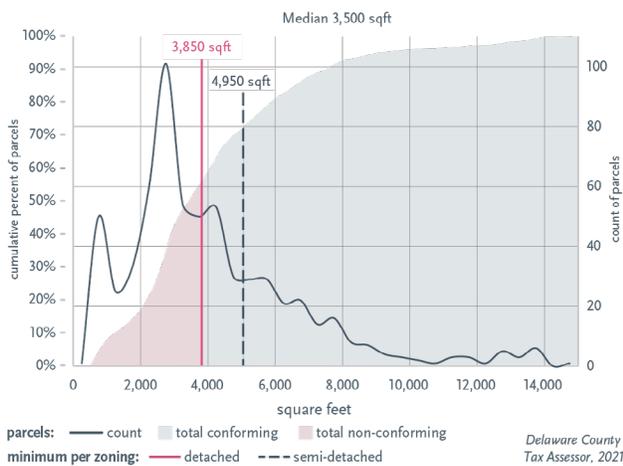

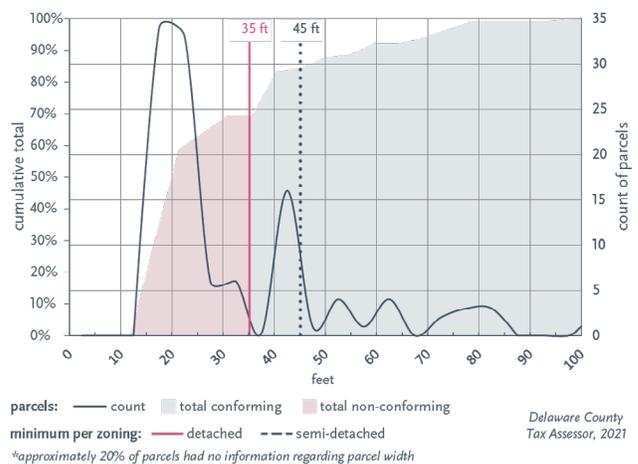

Figure 6. Distribution of lot widths (R2)

In Media, FHI Studio undertook a GIS and statistical analysis that compared the current zoning to on-the-ground conditions. The analysis found that the bulk and lot standards frequently made a majority or more of existing lots non-conforming. It also revealed that neighborhoods included modest but important numbers of small multi-family housing, even though they were not permitted in the ordinance.

In evaluating the existing context and what could happen under current policies, we will develop real-world examples and graphics that illustrate what is currently permitted and how that may or may not advance Township goals.

The FHI Studio team will present our findings in a technical memorandum. We will also make one presentation on our findings to the Steering Committee and a Joint Session (Task 1.10).

Task 3.2: Framework of Substantive Revisions

Our team will develop a framework identifying the recommended substantive revisions based on all work completed up until this point, including technical analysis and community engagement. We will coordinate with the Project Manager to develop a strategy for the presentation of this framework to the Steering Committee (Task 1.2), the public (Task 1.8), and a Joint Session of Boards and Committees (Task 1.9). After this task, FHI Studio will update the framework to reflect the public input and, in coordination with the Project Manager, finalize an approach for ordinance development, as detailed in the following tasks.

Task 3.3: Zone by Zone Update

The FHI Studio Team will develop and integrate substantive new language for all applicable zones, creating standards that reflect Haverford's community goals and align with best practices. This stage will focus on specific updates tailored to support Haverford's vision, with a particular emphasis on facilitating sustainable, mixed-use, and context-sensitive development. This will include updates to the permitted uses, bulk, and lot standards of each zone. Where appropriate, we will incorporate context-sensitive design standards or form-based regulations. We will work closely with the Project Manager to develop a schedule for the production, review, and presentation of these changes to the Steering Committee.

Task 3.4: Supplemental Regulation Updates & SALDO

Parallel to the zone updates, we will make updates to address the Primary Focus Areas identified in the RFP. This will likely include changes to:

Article I: General Provisions

Article VII: Supplemental Regulations

Article VIII: Nonconforming Uses, Buildings and Lots

Article IX: Administrative Regulations

Article XII: Conditional Uses

Article XIII: Historic Preservation

Our team will also work with the Township to identify how zoning changes may impact Chapter 160 (Subdivision and Land Development). We anticipate that there will be changes to Section 160-5 (General purpose and applicability; design standards) to align context-sensitive regulations.

Task 3.5: Zoning Map Updates

FHI Studio will provide updates to the zoning district boundaries if changes are needed in response to recommended amendments of the Phase 2 process. The Town will provide FHI Studio with GIS data in support of this task. We will provide the map updates in GIS shapefile or geodatabase format.

Task 3.6: Draft Update

FHI Studio will prepare a draft of the zoning ordinance. This draft will be presented in the format agreed upon in Task 2.3: Document Formatting Revisions. We recommend the document have a print version and an interactive PDF that incorporates many web-like tools (hyperlinks, back buttons) but allows for easy distribution and later incorporation onto ecode360.

Stage 4: Finalization and Adoption

Task 4.1: Draft Review and Revisions

FHI Studio will present one (1) draft of the ordinance to the Steering Committee for review and comment. Our team will make one (1) revision and then release a public draft for further review and comment.

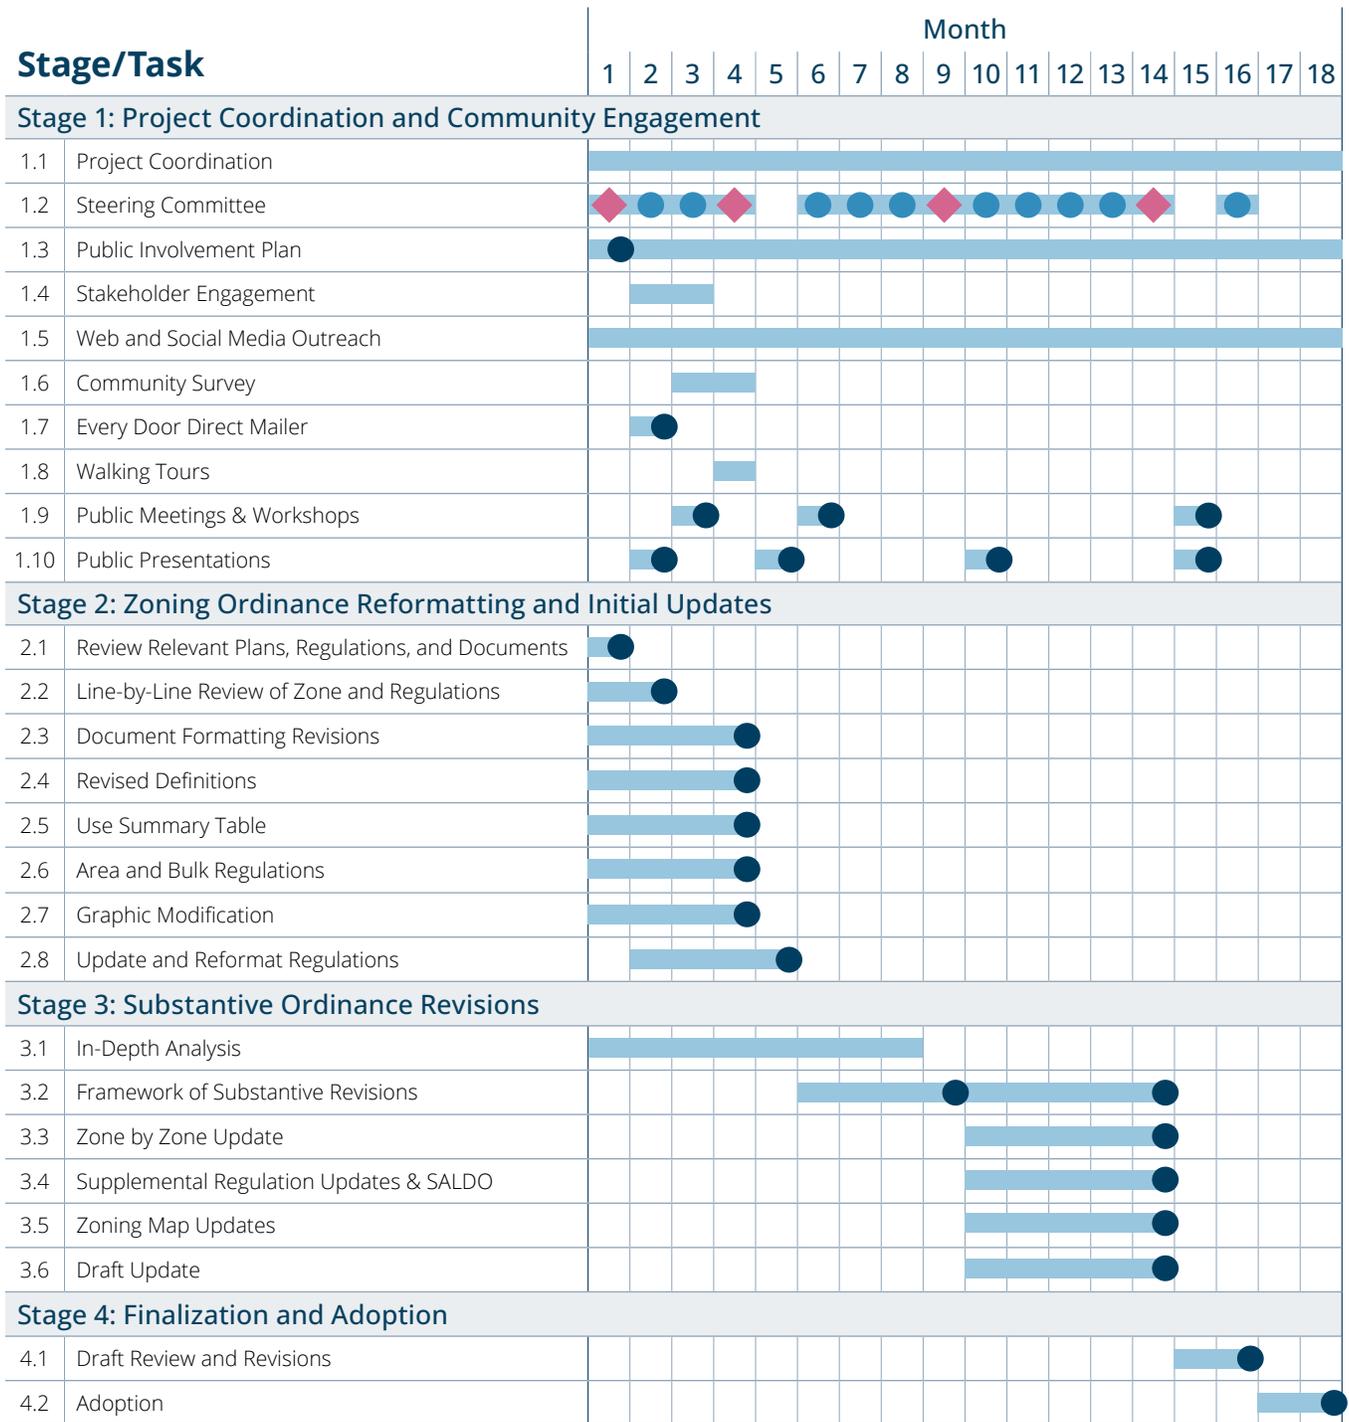

A final draft will be prepared and presented for adoption. Given the complications that come with revising an ordinance after it has been submitted for adoption, we will work with the Project Manager to coordinate review and comments by the Board of Commissioners as part of the public draft review. Any revisions to the document after it has been presented to the Board of Commissioners for adoption shall be considered outside the scope and budget presented herein.

Task 4.2: Adoption

FHI Studio will coordinate with Township Staff and the Township Solicitor to initiate the review and adoption of the final ordinance in accordance with applicable timelines, including review by the County Planning Commission and other entities, as required.

FHI Studio will present at up to two (2) Board of Commissioner meetings in support of the adoption of the ordinance.

Project Schedule

◆ In-Person Meeting ● Virtual Meeting ● Deliverable

Budget

Our proposed project budget is designed to deliver a comprehensive zoning update. Each budget item aligns with key project tasks, ensuring thorough analysis, inclusive public outreach, and ordinance that meets the Borough's long-term goals. FHI Studio will bill the project on a percent complete basis. Where the Township authorizes work outside the proposed scope, it will be billed on a time and material basis according to the rate schedule below.

LABOR

Stage 1: Project Coordination and Community Engagement	8,000
Stage 2: Zoning Ordinance Reformatting and Initial Updates	16,000
Stage 3: Substantive Ordinance Revisions	30,000
Stage 4: Finalization and Adoption	10,000
Subtotal Labor	100,000

DIRECT EXPENSES

Printing	\$1,000
EDDM	\$3,500
Travel	\$1,500
Subtotal Direct Expenses	\$6,000
TOTAL	\$200,000
